## Executive summary

This document was originally commissioned by Fairbrother Pty. Ltd. in order to accompany an application to the Hobart City Council for the redevelopment of 2 Collins Street, Hobart. The statement of historical archaeological potential was developed in 2014 as the first stage of managing historical archaeology in that project.

### The brief for this project was:

- To develop a **statement of archaeological potential** (SoHAP) as the basis for archaeological planning.
- To undertake an **archaeological impact assessment** for the proposed development as informed by the statement of archaeological potential.
- If necessary, refine the statement of potential and formulate **mitigation strategies** for any identified impact.

That project did not progress to an archaeological impact assessment nor archaeological method statement, as the proposed development did not go ahead. The site was on sold to Fragrance Tas-Hobart (Collins) Pty. Ltd. Who commissioned Praxis Environment to review the previous SoHAP then progress the archaeological impact assessment and archaeological method statement to take a new proposal to development application stage (i.e. complete the above brief).

Consistent with the process advocated by the ICOMOS Australia *Burra Charter*, conservation planning process as accepted by the Australian heritage industry and the specific provisions of the various statutory heritage planning/permit authorities, this document has:

- Provided an overview history of the development of the subject site and the precinct in which it is situated and a context within which to understand its archaeological potential and significance.
- Developed policy by which future development of the site can be guided (archaeological policy).
- Assessed the impact of a particular proposed development upon archaeological significance.
- Formulated mitigation strategies to manage any likely heritage impacts arising from that development.

### This report has concluded that:

A large part of the site has high potential to yield archaeological remains and information on a range of early cultural activity, including:

- The c1822 government slaughterhouse (the first official meat processing facility in Hobart Town).
- Residential development dating to as early as the 1810s (at least 7 individual houses – some substantial).
- Industry, including woolstapling and fellmongery dating back to the 1820s (and an operation which ran for almost a century).

A portion of the site has low archaeological potential, being the former course of the Park Street/Domain Rivulet which is likely to have been subject to extensive disturbance.

The site generally appears to have been subject to little disturbance, with twentieth-century development being largely on top of (and including) substantial fill to raise the general ground level. This is likely to have encapsulated and protected earlier archaeological remains. The place has the potential to add a greater depth of knowledge on the Wapping area, with a considerable amount of archaeological work having already been undertaken in the area. A series of research questions have been posed for the site, which demonstrates its potential to add knowledge to key historic themes of importance to Tasmania (and beyond). Accordingly, the following archaeological zoning plan and summary is proposed:

Figure ES.1 – Archaeological zoning plan, 2 Collins Street (adapted from GoogleEarth).

| Area | Likely remains  | Likely integrity   | Significance/potential  |
|------|---|--|---|
| Blue | Domestic discard, underfloor deposits, structure, drains, paving etc. associated with post 1858 housing and 100 years of occupancy. | Likely to be reasonably intact, the only disturbance event being the demolition of those buildings and the c1958 construction of the current Roberts building. The building being largely laid out as a 'clear span' building and the likely filling of the site to build up the level is likely to have preserved remains.  | Of some archaeological interest in demonstrating the evolution of the site and how the 'higher class' fringe of Wapping developed alongside the reinvigoration of the area resulting from the nearby railway station. Nonetheless, remains of 1870s+ buildings and occupational debris are not considered to be of the highest significance.<br><br>Whilst it is likely that there are remains of these buildings and occupation deposits in this area, with the low level of significance of these remains it is concluded that these are of <b>low archaeological potential</b> . Note that as per below, deeper deposits in this area are likely to be of high archaeological potential. |
|      | Possible ancillary structures and artifacts relating to the government slaughterhouse.  | Unknown. The exact nature of any ancillary infrastructures relating to the slaughterhouse is unclear. It is also not known how thoroughly the site was demolished/cleansed prior to the post-1860 construction of the residences in this location. It is likely that the level of the site was built up following the demolition of the slaughterhouse and prior to construction of the residences which would act to preserve earlier archaeological remains. | Of high significance as Hobart's first large-scale meat processing facility and the government's attempt to regulate the meat industry.<br><br>Until a more adequate knowledge is gained as to the integrity of any slaughterhouse remains, these remains must be considered to be of <b>high archaeological potential</b> .  |
| Red  | Domestic discard, underfloor deposits, structure, drains, paving etc. associated with post 1870 housing and ~80 years of occupancy. | Likely to be reasonably intact, the only disturbance event being the demolition of those buildings and the c1958 construction of the current Roberts building. The building being largely laid out as a 'clear span' building and the likely filling of the site to build up the level is likely to have preserved remains.  | Of some archaeological interest in demonstrating the evolution of the site and how the 'higher class' fringe of Wapping developed alongside the reinvigoration of the area resulting from the nearby railway station. Nonetheless, remains of 1870s+ buildings and occupational debris are not considered to be of the  |

|       |  |  |  |
|-------|--|--|--|
|       |  |  | <p>highest significance.</p> <p>Whilst it is likely that there are remains of these buildings and occupation deposits in this area, with the low level of significance of these remains it is concluded that these are of <b>low archaeological potential</b>. Note that as per below, deeper deposits in this area are likely to be of high archaeological potential.</p>   |
|       | Structure, artifacts and ancillary infrastructure relating to the actual footprint of the government slaughterhouse.   | Unknown. The exact nature of the slaughterhouse is not known, although depicted as a masonry building. It is also not known how thoroughly the site was demolished/cleansed prior to the post-1870s construction of the residences in this location. It is likely that the level of the site was built up following the demolition of the slaughterhouse and prior to construction of the residences which would act to preserve earlier archaeological remains. | <p>Of high significance as Hobart's first large-scale meat processing facility and the government's attempt to regulate the meat industry.</p> <p>Until a more adequate knowledge is gained as to the integrity of any slaughterhouse remains, these remains must be considered to be of <b>high archaeological potential</b>.</p>   |
| Green | <p>Fill from the filling of the rivulet following drainage works c1916-25.</p> <p>Remains of infrastructure used to control the Domain/Park Street Rivulet (e.g. walls, channels etc.).</p> <p>Remains of the natural rivulet bed.</p> | It is unclear what methods were used to fill the rivulet and how thoroughly any associated infrastructure was demolished. At least two sewer mains are shown on the 1936 plans for the Roberts building which would have impacted the integrity of this part of the site. The foundations of the Roberts building were substantial (probably necessitated by the less stable rivulet bed) which would have further impacted upon any archaeological remains.     | <p>Whilst there may be some artifacts (discard/fill) and ancillary structures of archaeological interest and/or relating to other themes across the site/area in this area, and insights into filling methods may be of some value for understanding site formation processes across the site, this area is likely to have been highly disturbed and of low significance in any case.</p> <p>Overall, this area is considered to have <b>low archaeological potential</b>.</p> |

|        |   |   |  |
|--------|---|---|--|
| Yellow | Area where there appears to have been little/no historical development (i.e. yard space).             |   | <p>Although there were no known buildings in this area, proximity to such an intensively utilised area means that there may be significant artifacts (discard/fill) and ancillary structures of archaeological interest and/or relating to other themes across the site/area. There is also the possibility that this area may have remains of undocumented buildings.</p> <p>Overall, this area is considered to have <b>medium archaeological potential</b>.</p> |
| Orange | Remains of early residential development (pre-c.1819) and the woolstapling and fellmonger businesses. | <p>These remains are likely to be largely intact, with only a single phase of development occurring post their demolition (c1925) and a high likelihood that extensive filling of the site was undertaken post-demolition of the earlier buildings. That development pre-dates mechanical excavation and the large and relatively open nature of that building, coupled with filling to level the site and bring it to the new street level is likely to have had minimal archaeological impact and acted to preserve underlying remains.</p> | <p>Of high significance as representing an early area of residential development in the Wapping (and general city fringe) area. Also of high significance as an early and long-running colonial industry.</p> <p>Overall, this area is considered to have <b>high archaeological potential</b>.</p>  |

A proposal has been formulated which seeks to construct a substantial mixed-use development on the site, which will result in 100% site coverage. Excavations required for the proposed development are limited to shallow clearance of recent structures, paving (etc.) across the entire site and a series of piles to bedrock in a grid pattern across the site. The archaeological impact assessment (Section 4) considers the impact of those works upon the identified archaeological values of the site.

Given that significant archaeological remains are likely to be deeply buried by more recent and non-significant fill, the clearance of the site to a shallow depth is not considered likely to have any archaeological impact (i.e. the clearance will not extend to the depth of significant archaeological remains). Also, given that piling offers no opportunity to undertake archaeological investigations in the works process and technically only disturbs a small percentage of the site, the archaeological method statement (Section 5) proposes an extensive **archaeological test trenching program** which seeks to yield a range of archaeological data from the site prior to the proposed development obscuring the future ability to undertake such works and essentially encapsulating the archaeological resource beneath the building.

## 1. Introduction

This document was originally commissioned by Fairbrother Pty. Ltd. in order to accompany an application to the Hobart City Council for the redevelopment of 2 Collins Street, Hobart. The statement of historical archaeological potential was developed in 2014 as the first stage of managing historical archaeology in that project.

### The brief for that project was:

- To develop a **statement of archaeological potential** (SoHAP) as the basis for archaeological planning.
- To undertake an **archaeological impact assessment** for the proposed development as informed by the statement of archaeological potential.
- If necessary, refine the statement of potential and formulate **mitigation strategies** for any identified impact.

That project did not progress to an archaeological impact assessment nor archaeological method statement, as the proposed development did not go ahead. The site was onsold to Fragrance Tas-Hobart (Collins) Pty. Ltd. Who commissioned Praxis Environment to review the previous SoHAP then progress the archaeological impact assessment and archaeological method statement to take a new proposal to development application stage (i.e. complete the above brief).

The site currently comprises of a c1958 store, warehouse and office building (formerly Roberts), a large open former workshop and façade (formerly a garage) and a ground-level carpark area. Figures 1.1-1.2 depict the area which is subject to the proposed works, which comprises the *subject site*, a portion of a 3009 square metre site comprising of Certificate of Title 121603/1, on the north-eastern fringe of the Hobart CBD.

Although the buildings on the site are not included in any statutory heritage list, the place is listed as a place of Archaeological Sensitivity (ref. 7) on Schedule 1 (Table 2) of the *Sullivans Cove Planning Scheme 1997* (the *scheme*); therefore Schedule 22.6 of the scheme (archaeological requirements) is applicable. Accordingly, the brief for this project was:

- To develop a **statement of archaeological potential** as the basis for archaeological planning.
- To undertake an **archaeological impact assessment** for the proposed development as informed by the statement of archaeological potential.

- If necessary, refine the statement of potential and formulate **mitigation strategies** for any identified impact via an **archaeological method statement**.

Figure 1.1 - 2008 Aerial image of the area – the subject site depicted in red. GoogleEarth.

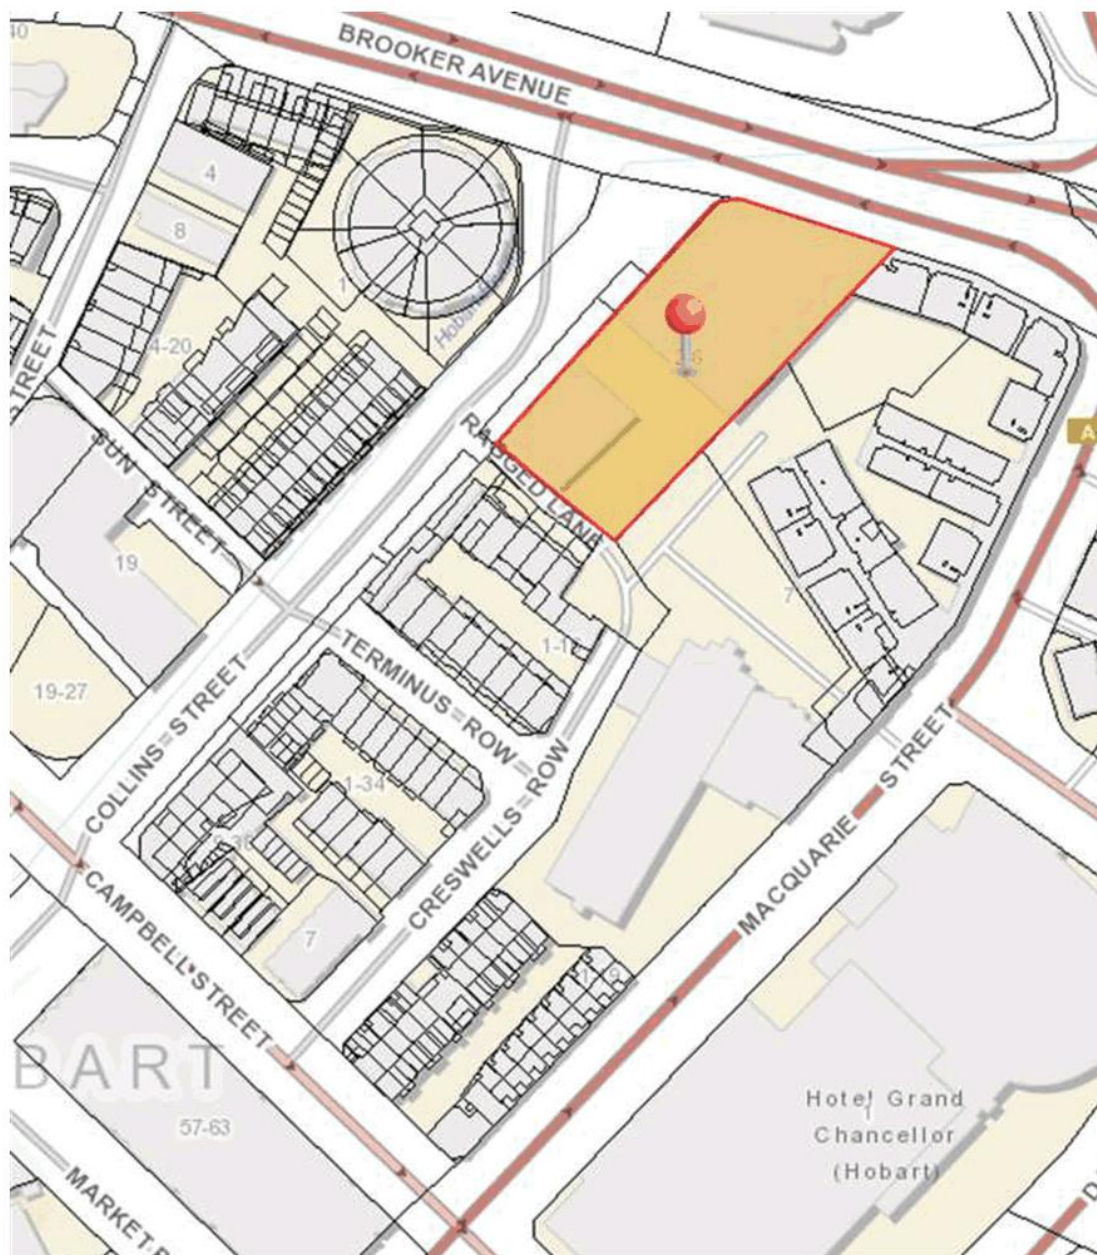

Figure 1.2 – Cadastral parcels comprising the subject site (depicted in red) and surrounds ([www.thelist.tas.gov.au](http://www.thelist.tas.gov.au)).

Whilst the place is not listed on the Tasmanian Heritage Register, the archaeological approach in this document has been developed with regard to the Tasmanian Heritage Council's Practice Note 2 – *Managing*

*Historical Archaeological Significance in the Works Application Process*<sup>1</sup>, and the Tasmanian Heritage Council's *Guidelines for Historical Archaeological Research on Registered Places*<sup>2</sup> as a means of demonstrating a sound and best-practice approach.

A proposal has been formulated which proposes a large mixed-use development which will provide 100% site coverage. That development does not propose mass excavation, beyond shallow clearing of the entire site and a series of piles to bedrock across the site. The archaeological impact assessment and archaeological method statement will consider the methodology required for the foundations of the proposed building and formulate a series of strategies to manage historical archaeology in-line with these statutory requirements.

## 2. Statutory heritage requirements

This report has been commissioned to consider the historical archaeological potential of the subject site arising from any applicable statutory listings. The following statutory heritage responsibilities that relate to historical archaeology are to be met in any development of the subject site:

### Sullivans Cove Planning Scheme 1997

The place is listed as a place of Archaeological Sensitivity (ref. 7) on Schedule 1 (Table 2) of the *Sullivans Cove planning Scheme 1997* (the *scheme*); therefore Schedule 22.6 of the scheme (archaeological requirements) is applicable.

Figure 1.3 – Excerpt from Figure 5a of the SCPS1997 showing the subject site (ref.7) and in relation to other areas of archaeological potential (pink).

Accordingly, any submission for development of a place of archaeological sensitivity requires either:

- An Archaeological Sensitivity Report;
- or
- A statement by a qualified archaeologist that either the site has been surveyed previously and found not to be of archaeological significance or that the nature of the 'building or works' will not result in destruction of any aspects items of archaeological significance.

And if significant archaeological remains are predicted, then the authority will have regard to:

- The likelihood of the proposed 'building or works' resulting in the removal or destruction of items of archaeological significance.
- The cultural significance of the site.
- Evidence of an adequate archaeological reconnaissance and site sampling prior to the approval or carrying out of works.
- The need to reasonably protect potential archaeological significance during the design, and carrying out of works.
- The need to undertake an archaeological 'watching brief' to be required during the carrying out of works.

#### **Tasmanian Heritage Register**

The subject site is not listed on the Tasmanian Heritage Register, therefore is not subject to the provisions of the *Historic Cultural Heritage Act 1995*.

#### **Other statutory heritage registers/lists**

The subject site is not listed on any of the following statutory registers:

- The National Heritage List
- The Commonwealth Heritage List
- The World Heritage List

Nor is it included in any buffer zones arising from those lists. Therefore is not subject to the historic heritage provisions of the respective Acts which enable statutory input into development of places on those lists.

**Aboriginal Relics Act 1975**

An assessment of any possible Aboriginal heritage values is not part of the brief for this report; nonetheless the provisions of the *Aboriginal Relics Act 1975* are applicable to the place.

### 3. Statement of Historical Archaeological Potential

#### 3.1. Archaeological methodology

This statement of archaeological potential is derived from a process which identifies the potential of the site to yield archaeological remains, the significance of any remains, and their potential to yield meaningful information about the site, and which might contribute to relevant key archaeological and historical themes.

The following briefly outlines the methodology followed:

Determining general archaeological potential: Through a desktop analysis of historical data and secondary sources, as well as non-invasive site observations, an understanding of the evolution of the site has been gained which has allowed an assessment of the archaeological potential (however significant) of any part of the site - resulting in substantiated predictions of the likelihood of finding *something* upon any particular part of the site.

This has been done by analysing primary source material, summarizing the developmental history of the site and developing a chronological narrative detailing an overview of the history of all known features to have ever existed on the site. Where possible, developmental overlays have been developed from historic maps, plans, photographs and other visual documentation. This overlay has been supported by other observations providing supplementary information, and also includes processes such as demolition and disturbance which may have removed or destroyed potential remains – and may have diminished the archaeological potential.

Assessing the significance and potential of any likely archaeological resources to yield meaningful information: Upon understanding the archaeological potential through desktop and site analysis, the next step was to understand its relationship to any aspect of the identified significance of the place – e.g. do the remains have the potential to demonstrate an aspect of the significance of the site or related key historic theme? The potential for any of the archaeological remains to demonstrate important aspects of the history of the site, whether in a state, regional or thematic context, is to be considered.

Understanding possible impact of development and formulation of management strategies: Based on any identified archaeological potential and significance of the site, consideration will be given as to whether the proposed development will impact upon any likely archaeological remains and if necessary broad management strategies will be proposed to manage any impact.

Table 1 (below) demonstrates the steps of this assessment:

| Methodology for formulation of the statement of archaeological potential   |   |  |
|--|---|--|
|  | If 'no'   | If 'yes'   |
| <b>1. Archaeological potential.</b><br>Are you likely to find something if you dig here? (i.e. a <u>Statement of Archaeological Potential</u> ). | Further action may not be required, although a contingency plan may be required for unexpected finds.   | The significance of the archaeological potential should be investigated.                                   |
| <b>2. Significance.</b><br>Could anything you find here greatly contribute to our understanding of the site or related significant theme?        | Further action may not be required.   | The likely integrity of the archaeological remains should be investigated.                                 |
| <b>3. Integrity.</b><br>Are any archaeological remains likely to be intact?  | Further action may not be required, although a contingency plan is required for unexpected integrity.   | The likelihood of significant archaeological remains is confirmed.   |
| <b>4. Impact</b><br>Will proposed works impact upon the significant archaeological remains? i.e. an <u>Archaeological Impact Assessment</u> .    | Further action may not be required, although a contingency plan may be required for unexpected impacts. | An <u>Archaeological Method Statement</u> will be required to detail how impact will be managed/mitigated. |

### 3.2. Source material

For this initial assessment of archaeological potential, the depiction of the physical history of the site will be the main consideration – with other aspects of site history (i.e. social histories, economic history, associations *et. al.*) likely to be more useful in any post-investigation analysis of findings (i.e. artifact assessment), therefore beyond the scope of the current document. Similarly, the history of other townscape developments is beyond the scope of the current document however may be useful in further detailed analysis of future archaeological findings.

The following overview of the known physical development history of the site aims to aid in the prediction of the likely archaeological remains. This does not represent a comprehensive site history, and has been limited to a history of the physical development of the site as relevant to the archaeological resource.

#### Primary sources

Broadly, the primary sources consulted in the development of the statement of archaeological potential include:

- Hobart City Council building files (AE471 series, Tasmanian Archive and Heritage Office).
- Historic maps, photographs (NS and PH series) - Tasmanian Archive and Heritage Office.
- Department of Primary Industry, Parks, Water and Environment (DPIPWE) aerial photo collection (Service Tasmania).
- DPIPWE – Land Data Branch, historic map collection (basement)
- DPIPWE – Land Data Branch, titles.
- Historic newspapers, via the National Library of Australia's *Newspapers Online* portal.
- Valuation rolls, as published in the Hobart Town Gazette.

#### Secondary sources

Several secondary sources were consulted in order to gain an overview of the history of the Wapping area generally, and a review of previous archaeological work in the area (further discussed below). These include (held by the State Library of Tasmania/heritage Tasmania):

*A History of the Roberts Limited Site*

Lindy Scripps (unpublished report), 1994.

*Down Wapping. Hobart's Vanished Wapping and Old Wharf Districts*

Wapping History Group. Blubber Head Press, 1998.

*Wapping, A New Place to Live.*

*Wapping Implementation Project. Site Histories.*

Tony Rayner, May 1995

*Archaeological and Heritage Fabric Assessment for Wapping (Draft).*

Austral Archaeology, June 1995

*Parcel 4 Wapping. Former Hedberg Garage Building Site. CMP + Development guidelines. Draft 2.*

Paul Davies Pty. Ltd., September 2003.

*Archaeological Excavation of Part of Parcel 2, Wapping.*

*Incorporating Excavation Report, List of Appendices and a Guide to the Research Archive.*

Austral Archaeology, November 2002.

*Wapping Parcel 4 Archaeological Test Excavation.*

Report Prepared for DED and Tourism, Austral Tasmania, May 2009.

### **3.3. Historical development of the subject site**

In order to gain an overview of what once existed on the site, as the basis for predicting archaeological remains, the following is a brief overview of the historical development of the site based on primary source documents (the subject site depicted in red) as well as overviews drawn from the secondary sources as detailed above. Note that this is a brief historical overview, concentrating solely on physical development, sufficient only for basic archaeological planning. As per above, further historical research is required in order to refine a detailed archaeological research design, which is provided here in Section 3.4. Such detail is also required to supplement the interpretation of archaeological findings – requiring an iterative process of the assessment of findings against further historical and comparative research from both primary and secondary sources, which is provided for here in the archaeological method statement (Section 5).

#### **Pre 1804 - Aboriginal occupation**

The land was the home of the Mouheneener people for tens of thousands of years, prior to displacement by European settlers in 1804.

#### **1810s-20s – Settlement, street gridding, subdivision and the first phase of development**

Subsequent to the settlement of Sullivan's Cove in 1804, following the disbandment of the initial European settlement of Risdon Cove, the settlement of Hobart Town began to grow in a somewhat organic matter. Following Governor Macquarie's inspection of 1811, Surveyor James Meehan was engaged to rationalise the layout of the settlement and install a grid-pattern of streets, as seen on his 1811 survey plan (DPIPWE Hobart 11). That survey shows the subject site as undeveloped land on the northern edge of the Hobart Town settlement. Whilst Collins Street had been formalised at that time, Macquarie Street did not extend that far northwards. The subject site was dissected by a stream known as the Domain or Park Street Rivulet, which formed a boundary between the main settlement area and Macquarie Point where a number of early farms were established, and Macquarie had designated land for a new Government House. The area surrounding the rivulet was prone to flooding, therefore development was somewhat slow compared to the nearby higher areas.

**1820s – The beginning of industrialisation:**

With the spread of the settlement, the pattern of development in the area changed during the 1820s. A new site was chosen for Government House at Pavilion Point in 1821 and nearby Hunter Island was connected to the mainland by a stone causeway initiating the development of the Old Wharf in 1820-21. Further, in 1826 the nearby Hobart Town Rivulet was diverted in a channel along Collins Street and into the Domain/Park Street Rivulet (which crossed the subject site). These events acted to push the town further northwards into this area which had become more appealing with those nearby events. During the 1820s a number of houses, hotels and commercial buildings and industrial complexes were established in the area bounded by Campbell, Collins, (what was to become) Macquarie and Park (Brooker Highway) Streets. This area became known as 'Wapping' due to the perceived similarities with the London dockside suburb.

New Government regulations required that all slaughtering of animals be done at registered premises, which sparked the establishment of a government slaughterhouse on the northern side of the stream in c1822 – the northern portion of the study area includes a portion of the slaughterhouse and yards. Despite attempts to maintain the water quality of the stream, the establishment of the slaughterhouse opened up this area for the establishment of 'noxious' trades.

Several c1820 sketches/paintings looking west over Hobart, although not considered to be highly accurate in terms of spatial depiction some show building(s) within the subject site. Note that these must be read in conjunction with the likelihood of artistic license. Figure 3.3.1 shows a single (dwelling?) in what is likely to be the subject site however the slaughterhouse is not depicted (consistent with an establishment of c1821-2). The slaughterhouse is shown on two undated, but c.mid-late 1820s survey plans (Figures 3.3.2 and 3.3.3). Figures 3.3.2 and 3.3.4 show the title configurations of the area and the southern portion of the subject site is contained mostly within a single title, that of the grant to Mary Facey, Figure 1.3.2 showing the title as much larger and Figure 1.3.3 implying that the southern portion (i.e. south of the rivulet) was within a single title (and the earliest depiction of what was to become Ragged Lane on the southern edge). Note that these plans do tend to only show the major public, government and commercial/industrial buildings therefore to not necessarily imply that other development was not present in the subject site at that time. Figure 1.3.5 shows several small buildings across the site (note that perspective makes it difficult to definitively depict the subject site on these images). Figure 1.3.6 shows a clear depiction of three (dwellings?) in a reasonably well-defined subject site, which is consistent with later maps of the area (as depicted below).

During the 1820s, the Collins Street frontage between the southern portion of the subject site and the rivulet was occupied by Mary Facey and her sons, who established a woolstapling business and later a

fellmongery. The rearward portion of the site (only partially on the subject site) was a candle and soap factory which operated for most of the nineteenth century, the rear portion of that (Macquarie Street facing) allotment was residential (within the subject site) until c1890 when the candle and soap operation was extended to the rear of the site (only just within the subject site). The earliest plans show the Collins Street frontage of this part of the subject site to be the property of Robert Wilson, however Facey appears to own the property from an early date and is listed as the first grantee. The 1820s plans show the building on this part of the site to be timber and set back from the street (e.g. Figure 3.3.9). When the Hobart Rivulet was diverted along Collins Street in 1825-6 the Facey property suffered considerable damage from flooding. The Town Surveyor recommended that she build a wall round her premises to prevent similar problems in the future and later plans suggest that she did so (e.g. Figure 3.3.12). Following Mrs Facey's death, her sons remained in business at the site as fellmongers and retained ownership of the property until the 1910s when the Hobart City Council acquired the property.

Figure 3.3.1 – Excerpt from Evans' 1819 panorama of Hobart Town, showing buildings within, or in close proximity to the subject site. State Library of New South Wales a1528621r.

Figure 3.3.2— Excerpt from an undated (c1820s) survey plan of Hobart (Tasmanian Archive and Heritage Office, PH-30-1-693-1).

Figure 3.3.3– Excerpt from an undated (c1820s) survey plan of Hobart (DPIPWE Hobart 12).

Figure 3.3.4— Excerpt from an undated (c1820s) survey plan of Hobart (DPIPWE Hobart 13).

Figure 3.3.5. – Looking east over Hobart area c1820. Note that the accuracy of this image is questionable, given some proportions and building location's which do not correlate with other sources – it is likely that this image includes considerable 'artistic licence' although it depicts a cottage in the vicinity of the subject site (approximately denoted by red arrow). Tasmanian Archive and Heritage Office PH30-1-405.

Figure 3.3.6 – Looking south towards Sullivan's Cove c1822 (the building within the study area denoted by red arrow). Note that the perspective of this painting might mean that some buildings that appear to be in the study area might be behind, or on the opposite side of Argyle Street. Tasmanian Archive and Heritage Office NS1013-1-1863.

Lee-Archer's 1828 survey plan of Hobart (Figure 3.3.7) does not show any development within the subject site, however that plan only shows major government, public and commercial/industrial buildings, therefore does not imply no development in the area (although interestingly omitting the government slaughterhouse). This plan does however show details of title boundaries which again suggest that the subject site was contained within a single title at that time.

Figure 3.3.7 – Excerpt from Lee-Archer's 1828 plan of the Hobart waterfront (Department of Primary Industry, Water and Environment 90411).

Figure 3.3.8 is an excerpt from an undated, but probably c.late1820s panorama of Hobart Town from the Macquarie Point area, which clearly shows three buildings on the southern side of the rivulet and what

appears to be the slaughterhouse building on the northern side. This is consistent with survey plans of the late 1830s and early 1840s as depicted below.

Figure 1.3.8 - C1820s Tasmanian Archive and Heritage Office PH1-30-406

#### **1830s – Intensification of settlement.**

Figure 3.3.9 is an excerpt from an undated, but pre-1839 map of Hobart and surrounds, which shows that the southern portion of the subject site had been subdivided into two allotments (with a portion of a third on the eastern edge). Three timber buildings are shown. The edge of the government slaughterhouse is depicted north of the rivulet only partially within the subject site and as a masonry building. This is consistent with the layout depicted on Figure 3.3.8. Two buildings within the Facey allotment are shown as is a small building within an internal allotment (probably a timber outbuilding) belonging to a George Schringeur, who is described in contemporary directories as a whaler. This internal block survived as a residential allotment until being taken over by the candle and soap factory c1890 and demolished for expansion of that operation.

Figure 3.3.9 – Excerpt from a c1830s map of Hobart and surrounds. DPIWE Map Hobart 5

Frankland's 1839 map (Figure 3.3.10) shows the same configuration of the three buildings in the southern portion of the subject site, and although omitting the slaughterhouse notes that it was present on the

northern portion of the subject site. Similarly, the 1841 census map (Figure 3.3.11) shows a similar configuration of buildings (and was likely to have been largely based on the Frankland survey. Further indications of the use, function and occupancy of the building(s) could be gained from analysis of the 1841 census data.

The establishment of the 'New Wharf' (Salamanca) in the 1830s was somewhat of a death-knoll for Wapping – with new business established near the new wharf, and the decline of the 'Old Wharf', coupled with continued flooding problems from the Hobart Town Rivulet, Wapping began a decline into a squalid and unappealing area. During this period, the industrialisation of the area increased, with further noxious trades being established – for example entrepreneurs such as Joshua Ferguson opened a slaughterhouse on the corner of what is now Macquarie Street and the Brooker Highway (Park Street) (just outside the subject site) and the soap and candle factory was established fronting Macquarie Street (the rear portion of which is within the subject site). Flooding was common, particularly following the 1820s diversion of the Hobart Rivulet and property owners were forced to construct retaining walls around their properties. Silting of the Domain/Park Street Rivulet was common and the discharge of industry made the area somewhat unappealing to intensive residential purposes as seen elsewhere in the town centre.

Figure 3.3.10 – Excerpt from Frankland's 1839 map of Hobart and surrounds. State Library of Tasmania, Allport Stack 912.94661MAP.

Figure 3.3.11 - Excerpt from the 1841 census map of Hobart and surrounds. Tasmanian Archive and Heritage Office, CS08-17-578.

## 1840s – The rise of 'Wapping':

Figure 3.3.12 - Excerpt from Sprent's 1841 map of Hobart and surrounds ([www.thelist.tas.gov.au](http://www.thelist.tas.gov.au)).

Sprent's 1841 survey (Figure 3.3.12) shows that around 1840 the southern portion of the subject site appears to have been redeveloped, with a different configuration of buildings than depicted on the surveys of the 1830s. A long, timber building occupied most of the eastern edge of the southern portion of the site

and two other buildings on the site (one of which on the south-western corner may be an extended version of those depicted in earlier surveys. The slaughterhouse is depicted largely as it had previously been depicted in earlier survey, again as a masonry building.

Figure 3.3.13 – Hood's 1854 map of Hobart – note the accuracy of this map is questionable (Department of Primary Industry, Water and Environment 139586747.)

#### 1850s-1900s – The slums of Wapping.

Figure 3.3.13 is an excerpt from Hood's 1854 map of Hobart and surrounds which is largely based on Frankland's 1839 plan (with some additions) therefore its accuracy is questionable. This plan shows another reconfiguration of the subject site, with development more concentrated on the Collins Street frontage, with only a single smaller building against the eastern boundary.

The latter half of the nineteenth century saw an intensification of development on the subject site, which was still separated by the Domain/Park Street Rivulet. In 1858 the slaughterhouse was removed to a new site on reclaimed land at Macquarie Point. The old buildings and cattle pens were demolished and the land offered for sale in four lots in 1860, which were sold to Samuel Wells Roberts, Henry Martin (2 lots) and Patrick Martin. Small scale domestic and industrial development seems to have occurred shortly after (see Figure 3.3.15). Figure 3.3.14 shows a large L-shaped building in this area (one end of which may also be seen in Figure 3.3.15). Whether this is a remnant of the earlier slaughterhouse is unknown – if not its life appears short-lived as it was had been demolished by c1890. By the 1890s a substantial conjoined house (with a distinctive mansard roof) had been constructed in the central portion of the Park Street frontage and a small timber cottage offset to the street grid facing the corner of Collins and Park Streets. By c1900 a large two storey brick building had replaced the small cottage on the corner, and a smaller house to the left of the earlier conjoined house. These buildings survived until they were demolished c1958 for the current Roberts building fronting the (now) Brooker Highway.

Development to the south of the rivulet initially appears to be a series of smaller buildings set to front Collins Street and along the rear of the site. Figure 3.3.14 depicts a chimney just off Collins Street suggesting an industrial use of part of the site (and is absent off c1880s depictions) although photographs from the later-nineteenth and early-twentieth century suggest residential buildings fronting Collins Street (industry probably occurring to the rear). An intensification of the use of this area is apparent, particularly in Figure 3.3.16 with larger buildings having been constructed along the edge of the rivulet and Figure 3.3.17 showing a large number of buildings across the site. By this time, the railyards had been established on the opposite side of park Street and the general area had changed substantially. The population of Wapping around 1880 was estimated at around 2000 people.

The Roberts occupation of the area started with the purchase of the area on the corner of Park and Macquarie Streets in 1890. This area had formerly been operated as Ferguson's slaughterhouse (distinct from the early government slaughterhouse) and cattle pens. In 1891, Roberts established a wool, skin and general merchandise store (note that this area is outside the subject site). Also in 1890, the candle and soap factory facing Macquarie Street was extended, with the demolition of small-scale residential development to the rear of the site, part of which is within the south-eastern corner of the subject site.

With the establishment of the Main Line Railway in the 1870s, the reclamation off Macquarie Point for major wharf development from the 1890s, and the public perception of Wapping - the 'gateway' to the city as a

slum, there was pressure to tidy up the area and improve access to the wharves and railway. Depictions from the late 1870s (Figures 3.3.14 and 3.3.15) show a number of small buildings on the southern portion of the subject site as well as a chimney which may suggest some form of intensive industry. A building can be seen on the northern portion, which may be the then recently closed slaughterhouse, prior to the construction of the houses facing Park Street – that portion of the site remaining largely as open space, probably remnant of the animal yards from the slaughterhouse operation. Figure 3.3.14 shows the rivulet as a formalised channel.

Figure 3.3.16 shows that by the 1890s, several residences had been built on the former site of the slaughterhouse, and that the rear of these buildings had a large open space. Intensive use of the southern portion of the subject site appears to have continued to that time.

Figure 3.3.14 – 'Balloons eye view of Hobart' showing the c1820s building frontage (red arrow) and the c1840 conjoined buildings (blue arrow).  
Australasian Sketcher 10 May 1879.

Figure 3.3.15 – Undated, but probably c1880s University of Tasmania, Royal Society Collection.

Figure 3.3.17 – View of the Park Street frontage of the subject site (denoted by red line) from the railyards, probably c1890. This shows the conjoined townhouses as well as a large number of buildings within the subject site (the exact rear boundary is difficult to ascertain with this perspective). Colin Dennison Collection.

#### 1900-1930 – Rivulet diversions and clearance

The houses fronting Park Street seem to have continued use as dwellings during the first half of the twentieth century, with their rear yards (to the rivulet) containing ancillary buildings. Further intensification and mixed use of the southern portion of the subject site continued through the turn of the twentieth century, with Facey's fellmongery business continuing to operate. The council continued to face the issues of flooding of the area caused by the convergence of the Hobart and Domain/Park Street Rivulets and the perception that the area was a slum, which caused embarrassment at the gateway of rail and port linkages to the city. By the 1910s, the population of Wapping had halved from that of c1880.

A scheme was devised to divert the rivulets through twin tunnels under the Domain to a new outfall to the north of Macquarie Point. Work began on the scheme in 1916 and necessitated the acquisition of properties in lower Collins Street (apparently including the Facey buildings), which were demolished. Photographs from the time show that the area was low lying, with the rivulet walls offering some flood protection. At the time of the rivulet works, fill was deposited widely over the area to build up ground levels. The scheme was not completed until the mid-1920s. The former bed of the Domain/Park Street rivulet through the middle of the study area was reclaimed and offered for sale in two lots in 1924 - one fronting on Macquarie Street, the other fronting on Collins Street. Both lots were purchased by Roberts & Co.

A large warehouse was constructed facing Macquarie Street shortly thereafter, and extended rearward with a Collins Street frontage in 1936 (i.e. crossing the subject site). This substantially increased Roberts holding in the area – expanding their operations formerly concentrated on the corner of Macquarie and Park Streets. Roberts then sought to acquire further land in the area, and in 1928 purchased 2-14 Collins Street and had by that time also acquired 2-8 and 16-18 Park Street. By that time, Roberts then owned almost half the city block bounded by Park, Collins, Macquarie and Campbell Streets.

Figure 3.3.18 - Plan showing proposed new channel for the Hobart Rivulet. c. 1910, the subject site outlined in red. Tasmanian Archive and Heritage Office PWD 266/2494/6].

Figure 3.3.19 – Excerpt from a C1910 photograph looking north along lower Collins Street, the Terminus Hotel (now the corner of Terminus Row and Collins Street) in the foreground and buildings within the subject site depicted by red arrows. Tasmanian Archive and Heritage Office PH30-1-3023.

The buildings on the original Facey land (i.e. the area south of the Domain/Park Street Rivulet facing Collins Street – the fellmongery business) were demolished by Council prior to 1925 (see Figure 3.3.20) and the land was offered for sale in several lots. Following the 1925 sale of part of the land which had been acquired by Council, with little interest in the remainder Council constructed a garage on the original Facey portion of the land – the façade and roof of which remains standing. By 1956, Council had little use for the building which was subsequently leased to a succession of tenants and was later purchased by Roberts and partially demolished.

Figure 3.3.20 – Excerpt from a panorama of Hobart, c1910 with a two-storey building within the subject site (facing Park Street) depicted by the red arrow. Tasmanian Archive and Heritage Office NS1231-1-24.

Figure 3.3.21 – Looking north along lower Collins Street, c1910s, with the Collins Street frontage of the subject site to the right of the photograph (approximately outlined by red lines). The turn in the rivulet can be seen with a two-storey building fronting Park Street and what appear to be two domestic buildings facing Collins Street. Tasmanian Archive and Heritage Office NS1013-1-3.

Figure 3.3.22 – Looking south along lower Collins Street, c1910s, with the corner of the subject site to the left of the photograph (approximately outlined by red lines). The turn in the rivulet can be seen. Tasmanian Archive and Heritage Office NS869-1-447.

Figure 3.3.23 – Excerpt from an oblique aerial photograph of Hobart, c. mid-1920s. The subject site outlined in red. This shows the first stage of the Roberts store on the former line of the rivulet, and that the HCC garage had not been built (rubble on that part of the site may be from the demolition of the Facey buildings). The buildings fronting Park Street are still standing. Tasmanian Archive and Heritage Office NS 892-1-64.

Figure 3.3.24 – Excerpt from a panorama of Hobart, c.late 1920s, showing the residential buildings facing Park Street and the garage building to the rear (fronting Collins Street – the roof and façade of this building still stand), the approximate subject site outlined in red. Tasmanian Archive and Heritage Office PH30/5096.

#### **Post 1950 – Regeneration**

The 1946 aerial run of Hobart shows the Roberts buildings weaving the former course of the rivulet and concentrated on the corner of Macquarie and Park Streets. Three houses fronting Park Street remained standing and the HCC garage and other buildings fronted Collins Street adjacent to the Roberts frontage of that street. The pre-1910 'L-shaped' building next to the garage was still standing. The buildings facing Park Street were demolished around (or prior to) 1958 when Roberts built the first phase of the existing office building/store.

Figure 3.3.25 - The subject site taken from the 1946 aerial run of Hobart (Run 1, 10894).

Figure 3.3.26 - The subject site taken from the 1958 aerial run of Hobart showing the current store building under construction (Run 5, T332-12 March 1958).

Figure 3.3.27 - The subject site taken from the 1968 aerial run of Hobart (Run 6-153 February 1968).

**Summary of development**

The above historical summary shows that:

- Until the first quarter of the twentieth century, the subject site was distinctly divided by the Domain/Park Street Rivulet (until rivulet diversion works between 1916-25).
- The northern side of the rivulet was occupied from c1822 to 1858 by the government slaughterhouse and yards. Following closure of the slaughterhouse, the land was sold and developed as three residential properties, which survived until the c1958 redevelopment of the site for the current building.
- The southern side of the rivulet was occupied from possibly as early as 1819 as a residential allotment, which was further developed in the 1820s as a wool processing facility and fellmonger. It seems that this enterprise resulted in a redevelopment of the allotment prior to 1841. It is possible that there were other industries and/or residential buildings on that lot, with the fellmonger business and buildings surviving until the early 1920s.

The following figures show overlay plans of known historic development on the subject site:

Figure 3.3.28 – Overlay of the footprint of the pre1827 buildings (light blue) in relation to the subject site (red) – drawn from the 1827 Sharland survey.

Figure 3.3.29 – Overlay of the footprint of the pre1830 buildings (blue) in relation to the subject site (red) – drawn from the c1830 survey.

Figure 3.3.30 – Overlay of the footprint of the pre1839 buildings (green) in relation to the subject site (red) – drawn from the 1839 Frankland Survey.

Figure 3.3.31 – Overlay of the footprint of the pre1841 buildings (yellow) in relation to the subject site (red) – drawn from the 1841 Census map.

Figure 3.3.32 – Overlay of the footprint of the pre1841 buildings (orange) in relation to the subject site (red) – drawn from the 1841 Sprent map.

Figure 3.3.36 – Composite overlay of the footprint of the 'best fit' footprint of the slaughterhouse and later nineteenth century houses on the northern portion of the subject site (colours as per coding above) in relation to the subject site.

### 3.4. The likely significance and research potential of archaeological remains

As depicted above, the subject site was the location of a residence constructed prior to 1819, the government slaughterhouse constructed c1821-22 and a number of other residential and commercial/industrial enterprises throughout the nineteenth century, including a woolstapling and fellmongers business from the 1820s (which operated for almost a century).

Paul Davies in the 2002 conservation management plan for the nearby Hedburg Garage (pp11-12), provides a very comprehensive 'thematic stocktake' relevant to the heritage of the Wapping area, within which the analysis of the archaeological potential of the subject site can be framed. This includes:

- Houses (domestic life) - 80 known houses dating back to the 1810s
- Hotels – 7 known hotels dating back to the 1810s
- Entertainment – Theatre Royal
- Schools – Ragged School (12 Collins Street)
- Religion – St Davids Mission Church
- Garages – 5 garages dating back to 1908
- Industry – Including cordial factory, smithy, timber yard, woodbending factory, tannery, jam factory.

In addition, the following themes are relevant to the subject site:

- Fellmongers
- Woolstapling
- Control of water (rivulet diversions etc.).

As per the findings of this document, the subject site has the potential to yield information which contributes to a knowledge of these themes and their analysis in local, wider thematic and temporal contexts.

A substantial amount of archaeological research has been undertaken within the Wapping area (as well as the wider Hobart city centre). The documents cited in Section 3.2 detail this work, which is summarised below as a means of contextualising the archaeological potential of the subject site. From the mid-1990s, the Wapping Implementation Project aimed to guide the redevelopment of Wapping and included an in-depth analysis of the history, thematic contexts and archaeological potential of the Wapping area. This

project identified six 'parcels' where the archaeological potential was further detailed and several archaeological projects have stemmed from that initial assessment.

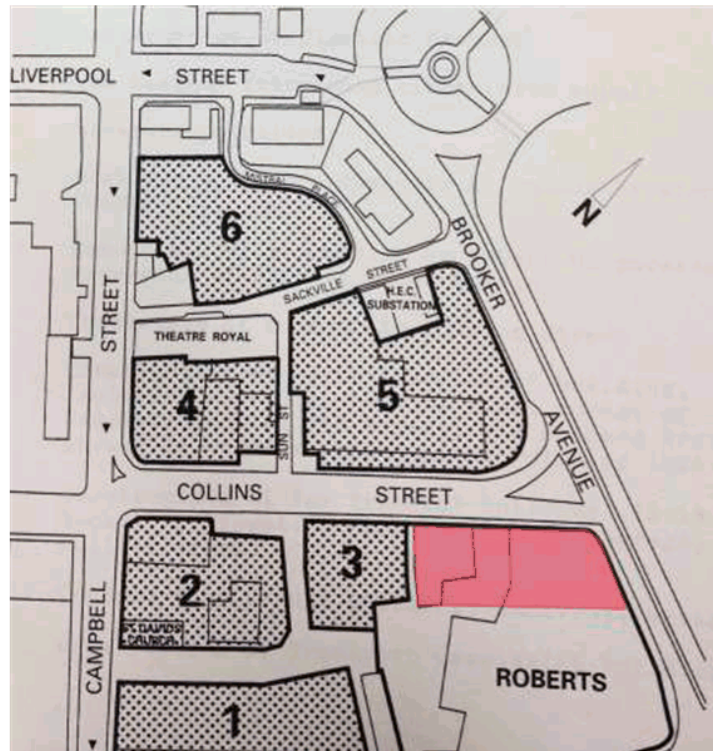

Figure 3.4.1 – Wapping 'parcels' as identified in Rayner (1994:3), the subject site denoted in red.

In 1995, Austral Archaeology undertook a fabric assessment of the Wapping parcels, which also included an overview history of the area and provided a thematic framework within which heritage and archaeological assessments could be undertaken. A series of archaeological research questions were posed, which are relevant to the subject site and are reviewed and expanded below. Those documents also propose management guidelines for the parcels, which are reviewed in the current document. In 1996, Austral Archaeology undertook test excavations on the former Shakespeare Tavern site in Parcel 4, which determined the presence substantial structural remains immediately below the paved surface, and a floor level 1800mm below current ground level – confirming the likelihood of filling in the area.

Following test excavations in 1998 (which also confirmed historic floor levels at 1.5-2.0 metres below existing street level), in 2002, Austral Archaeology undertook a wide-ranging series of excavations within Parcel 2 of Wapping. These excavations fulfilled both a broadscale and wider sampling program, covering six early allotments and have provided a comprehensive dataset across a range of site types within that parcel. In 2009, Austral Tasmania also undertook further excavations on Parcel 4 (further to a 2005 detailed historical archaeological assessment), which further demonstrated the archaeological potential of that parcel as well as the potential for analysis of the Wapping area as an early and diverse inner-city Hobart community. Further investigation of that parcel is likely in the near future as it is scoped for redevelopment. Whilst Parcels 1,3,5 and 6 are yet to be further investigated, the results from (and forthcoming) Parcels 2 and 4 provide a good level of baseline data against which any archaeological results from the subject site can be analysed. Excavations in Parcel 2 indicated that historic cultural remains were very deep, in some cases spanning 1.75 metres from the most recent to earliest deposits.

Such analysis also has the potential to add depth to other similar such analyses of early-mid Victorian Hobart high society such as that undertaken as part of the nearby Menzies Centre (Liverpool/Campbell Streets) excavations, which investigated several prominent 1820s-onwards inner city residences, including Crowther's (Godden Mackay Logan/Arctas). Similarly, investigations at Peter Degraives house in Collins Street (Hadleys Hotel development, Godden Mackay Logan) and preliminary investigations at the original Hobart Port Officer's residence at 100 Salamanca Place (Praxis Environment) have investigated prominent early inner city residential sites. Forthcoming excavations on other prominent Hobart residences such as Kemp's house (36 Argyle Street), Judge Pedder's house (173 Macquarie Street), Crowther's house/surgery (177 Macquarie Street) and Orr's house (3 Montpelier Retreat) will also act to build upon knowledge and provide comparative datasets of early and substantial Hobart residences. The results from these investigations are useful comparative datasets at the other end of the domestic spectrum to the Wapping 'slums' and any results from the Wapping area will add to knowledge across the board on early Hobart society.

From a wider regional perspective, archaeological data and remains yielded from the subject site, whether coupled with other Hobart/Tasmanian data, has the potential to strengthen a comparative dataset for research into intra-colonial society through comparison with mainland (and indeed inter-colonial society on an international level). For example early inner-city working-class communities such as Broadway, Cumberland/Gloucester Streets and the Rocks (Sydney) and Little Lonsdale Street (Melbourne) and portside

working-class areas such as Port Adelaide, all of which have had substantial archaeological works undertaken, would provide useful datasets for the analysis of Wapping data, which would in-turn add to the depth and scope of the analysis of those collections on the range of themes as outlined above (and others).

From a temporal perspective, any remains from the earlier occupation of the site (i.e. pre-1830) represent a very formative period of Hobart's European settlement and are likely to be of significance when considering their research potential – in particular the site of the pre-1819 house and the early Facey operations on the site. Given that the subject site was used for both residential and commercial/industrial purposes by that family for around 100 years, analysis of the evolution of the site and evidence of activities undertaken thereon have the potential to yield information on the changing face of Hobart during that century, particularly within the context of the growing port and railway infrastructure nearby.

Consistent with the 'Tiered research question' approach outlined in the Tasmanian Heritage Council's *Guidelines for Historical Archaeological Research on Registered Places*<sup>3</sup>, the following questions could be investigated in the archaeological remains expected to be present within the subject site:

**Tier 1 Questions:** These questions outline the essential knowledge base needed for any site research or significance evaluations. Such questions are often empirical in nature, and straightforward answers can be sought and often identified – generally limited to a physical knowledge of that particular place. Questions relevant to the subject site may include:

- How closely did the buildings and site features (including outbuildings, the rivulet etc.) conform to the historic plans?
- Can the earliest date of occupation of the place be identified?
- What construction methods were used in the buildings and other infrastructure?
- What evidence of alteration of the natural landscape is archaeologically determinable (e.g. filling of the site etc.).
- Are the distinct use/development phases of the buildings distinguishable?
- Can the layout and function of the buildings, and indeed individual rooms or yard spaces be ascertained?

---

<sup>3</sup> <http://www.heritage.tas.gov.au/media/pdf/Archae%20ResGlines%20%20FINAL%20-%20June%202009.pdf>

- How thoroughly were the buildings demolished?

Answers to these questions provide a foundation of information about the structure, type, use and duration of site occupation which enables the researcher to consider a second tier of questions.

**Tier 2 Questions:** Conclusions that can be drawn about a site that connect the material remains found on a site to specific behavior. For instance, how do artifacts relate to the lifeways of the households that lived on the site, or occupations undertaken on the site? For instance, do any artifacts represent class, gender, taste and health/hygiene of those living on the site? Particularly if artifacts can be specifically dated, and with supplementary historical research, artifact assemblages from this site may contribute knowledge and provide tangible connectedness to known inhabitants and their families, and how they lived. Similarly, do artifacts or structural remains correlate with the known activities and occupations undertaken on the site (e.g. fellmongering, slaughtering etc.). How do these demonstrate the mix of residential, commercial and industrial uses of the area?

**Tier 3 Questions:** These questions represent the highest level of inquiry. Such questions associate the activities and behavior at individual sites with broad social, technological and cultural developments – which can be of interest on local, national or global lines of enquiry. Whilst these questions posed for a single site may not reach conclusions in the short term (as Tier 1 and 2 questions might) – the collection of data can contribute to future research by the provision of a comparable dataset. The goal of such research is to develop increasingly refined and tested understandings of human cultures within broader theoretical or comparative contexts. Lines of wider enquiry that findings from within the subject site may contribute to are:

- Do the conclusions on gender, class, economic and social status of the inhabitants of the buildings conform to the 'normal' early-mid Victorian household?
- Are there class or status differences evident in the material culture of the inhabitants of this area (subject to further historical research) when compared to, say, other early Hobart residents (including other Wapping sites previously investigated), or residents in contemporary rural areas and/or other cities. Does this support the notions of Wapping's rise and fall from a desirable area to a slum?

- Did any changes in material culture through time in the residences coincide with wider Tasmanian or local events or technology (e.g. end of convict labour, urbanisation/development of Hobart, port/railway upgrades, start of rubbish collection etc.)?

### 3.5 Current site observations and assessment of prior disturbance

As per the methodology outlined in Section 2.1, Section 3.3 has formed a desktop assessment of the factors which have influenced the development of the possible archaeological resource within the subject site over a 180+ year period. This has indicated that the subject site has been the site of residential, commercial and industrial development, which as per Section 2.1 would have left archaeological traces (in the absence of disturbance).

**However, it is critical to understand other factors, in particular site disturbance, which may have impacted upon the archaeological potential of the site and its ability to provide meaningful archaeological remains which answer research questions such as those above.** This section will review site observations and likely scenarios which would have resulted in disturbance, in order to assist in understanding the likelihood of the survival of archaeological remains.

#### General site observations

The site comprises of three main elements – the Roberts building, the carpark and a portion of the c1926 former garage.

The Roberts building was constructed in three major phases – the Brooker Highway frontage (c1958), the rear warehouse (opening to carpark) (c1970s) and an infill section between these buildings (c1980s). The ground floor of the building is largely clearspan (approx. 1500 square metres), with minimal columns and partitioning of the Brooker frontage building comprises of only lightweight partitioning. This suggests that the foundations are limited to the perimeter of the building, the few internal walls and the immediate vicinity of the piers (the original plans for these buildings could not be located for confirmation) – therefore widespread disturbance for strip footings may not have occurred. The floor is a concrete slab appears to be substantial and the floor level is around 1.5 metres higher than the ground level around the adjacent c1890s woolstore (Old Woolstore Apartments) – suggesting that the area had been filled prior to the construction of the Roberts building in 1958. All of these factors suggest that there may have been minimal disturbance to deeper archaeological deposits with the construction of that building – i.e. a foundation system with limited footprint and a buildup of ground level (rather than bulk excavation).

Figure 3.5.1 – The Collins Street/Brooker Highway frontage of the former Roberts building (Google Earth).

Figure 3.5.2 – Lightweight internal partitioning of the Brooker Highway frontage of the former Roberts building.

Figure 3.5.3 – Open layout of the rear portion of the building.

The c1926 former garage at the southern end of the subject site (corner of Collins Street and Ragged Lane) has been partially demolished with only the façade, Ragged Lane wall and modified roof structure remaining. The floor of this building is a bitumen carpark. Plans for this building could not be located, however as it was constructed by the Hobart City Council shortly after rivulet diversion works, and with the likelihood of extensive filling of the area at that time, it is likely that the construction of this building (and subsequent partial demolition) would not have disturbed deeper archaeological remains (for example, plans for the contemporary former Hedberg Garage across Collins Street show that the site was filled by up to a metre prior to construction of that building).

Figure 3.5.4 – The remaining portion of the c1926 garage building.

The carpark area is approximately 1500 square metres (including the footprint of the former garage) and is a largely level area sealed with bitumen. No indication of any underlying archaeological remains can be ascertained from inspection, the only useful observation being that the carpark is above the level of the ground of the adjacent Old Woolstore complex (from up to 1.5 metres at the Brooker end, to around 600mm at the Ragged lane end) – again suggesting that the ground has been built-up in this area.

Figure 3.5.5 – View across the carpark, facing north.

#### **Likely specific disturbance events**

Whilst the observations above detail the site evidence of disturbance, a disturbance history can also be built from a desktop assessment - i.e. known events which are likely to have impacted upon archaeological remains. Section 3.3 has detailed the evolution of the site from the historical information which is available.

The possible impact upon archaeological remains deriving from each of these events will be detailed below:

#### Demolition of the slaughterhouse and yards (c1858).

Very little is known about the exact layout and nature of the slaughterhouse and it is not known how thorough the demolition and cleansing of the site was at the time of demolition. An auction was advertised (e.g. in the Mercury on 27<sup>th</sup> May 1858:p3) for the building materials of the old slaughter house to be sold without reserve on the 11<sup>th</sup> June that year. Whether purchasers of materials removed subsurface remains

(e.g. foundations) is not known – but it is unlikely that the value of those materials would warrant exhaustive removal in the absence of machinery. With the trend of building up the land around the rivulet, it does not seem likely that the building was demolished to sub-surface levels and it is more likely that items of value from the superstructure would have been removed and the site filled. Nonetheless until further research (historical or archaeological) can determine detail of the demolition, then the possibility of substantial remains of the slaughterhouse and associated infrastructure should not be ruled out.

Construction of the row of houses facing Park Street (post 1880).

No detail on the construction of these houses could be found (i.e. pre-dating HCC building records). Again, it is assumed that there was a general desire in the area to build up land, particularly for residential buildings in close proximity to the rivulet, so it is likely that any underlying remains of the slaughterhouse and associated infrastructure may not have been disturbed by the construction (and later demolition) of these houses.

Demolition of all pre-1916 buildings and rivulet diversion (c1916-25)

When the Hobart City Council acquired the area in 1916 and commenced clearance for the redevelopment of the area, all buildings on each side of lower Collins Street were removed. Sources (e.g. Down Wapping) indicate that widespread filling of the area (e.g. spoil removed from tunnelling works) occurred, which is consistent with the archaeological evidence elsewhere in Wapping which (in some cases) indicates that over 1.5 metres of fill has been deposited above historic floor levels. Despite (presumably) a substantial labour-force at-hand for the rivulet diversion works, it is likely that filling of the site would have meant that shallow remains were buried rather than removed which may have acted to preserve archaeological remains of that early development (possibly dating back to the 1810s, and representing almost 100 years of residential, commercial and industrial occupation).

Construction of first Roberts building (1936 – now demolished)

Plans exist from the construction of the 1936 Roberts building which was mostly on top of the course of the former Domain/Park Street rivulet, on land becoming available after the rivulet diversion works. This was an extension of the c1926 Roberts building that fronted Macquarie Street, also built on a parcel of land arising from the diversion works. This shows widespread disturbance of the footprint, with substantial piling, pile capping and filling having occurred, as well as some filling to raise and level the site (which had probably already been raised as part of the c1916-25 rivulet diversion works). Two sewer mains were also installed at

that time (or had been installed earlier). Such extensive foundations were probably a response to the instability of the former rivulet bed and would have caused widespread disturbance of that part of the site. Demolition of that building in the latter half of the twentieth-century would have also caused disturbance.

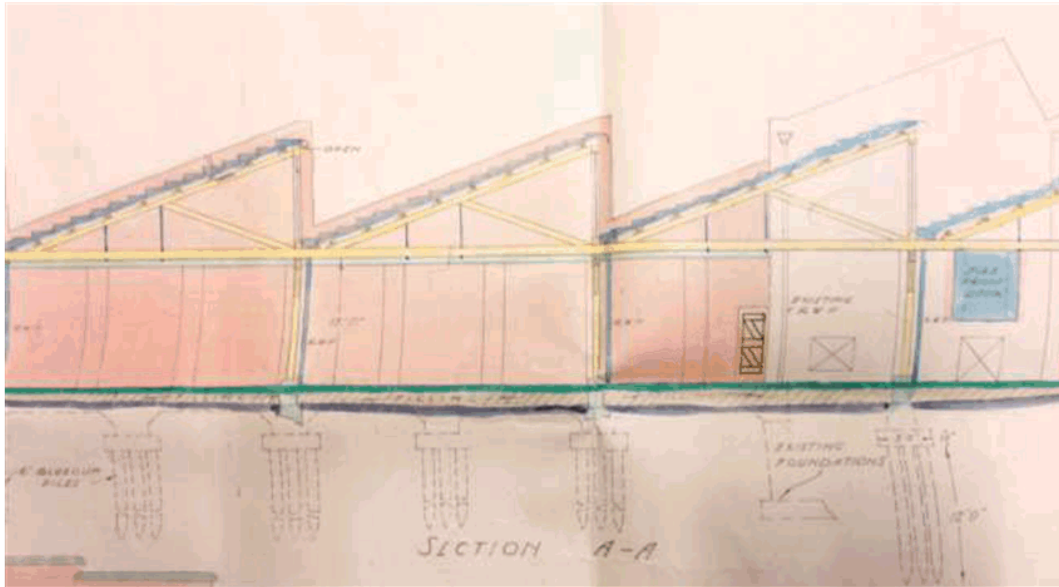

Figure 3.5.6 – Section through the 1936 Roberts building showing extensive piling but with substantial filling on top of the existing ground level. Tasmanian Archive and Heritage Office (HCC series) AE417//1924.

#### Construction of the current Roberts building (1958).

Prior to 1958 (and after 1946), the three houses and outbuildings fronting Park Street (Brooker Avenue) were demolished. Again, records do not indicate how thoroughly these buildings were demolished (and also noting that these were partially on the site of the slaughterhouse. It is presumed, however, that the site would have been filled to raise it to a level consistent with ground raising works undertaken from the 1910s onwards which may have resulted in foundations and other archaeological remains being undisturbed and covered by the new building. As per the description above, that building is largely clearspan (i.e. minimal internal walls), which may not have required extensive or deep foundations (plans for this building could not be located). This building is on a portion of the land which would have been more stable (i.e. not within the former course of the rivulet) which also suggests that foundations may not have been as intrusive as those of the adjacent c1936 building therefore may have caused less disturbance.

Subsequent service trenches etc.

A search of electricity, sewer, gas, telephone and other underground asset registers suggests that there are few major underground services within 2 Collins Street. The 1936 plans for the construction of the (now demolished) Roberts building shows two sewer mains running below that building (i.e. along the former line of the rivulet), however these do not show on current asset registers and may be redundant. Nonetheless, the installation of these would have caused disturbance along that line. Whilst there are likely to be a number of service lines throughout the site, given that there is likely to have been extensive filling across the site these may have only been excavated into that more modern (and non-significant) fill therefore may not have substantially impacted significant archaeological remains.

**3.6. Archaeological zoning plan and policies**

As per the methodology outlined in Section 3.1, this section has built a chronology of site development which has detailed the physical evolution of the site and events/processes which would have acted to build the archaeological record. Section 3.4 has discussed the likely significance of those archaeological remains and what they may yield in terms of research potential alongside key historic, regional, thematic and temporal lines of enquiry. Section 3.5 has provided an assessment of the events which are likely to have impacted upon the integrity of those archaeological remains.

From the above, it is therefore possible to formulate an archaeological zoning plan, which provides an indication of the parts of the site which are likely to yield significant archaeological remains. The spatial reference provided by the zoning plan can then be coupled with archaeological management policies, which are guided by the significance of the particular remains expected and their ability to yield information as per the research questions.

Figure 3.6.1 depicts the areas of archaeological potential as per the above discussion:

Figure 3.6.1 – Archaeological zoning plan, 2 Collins Street, Hobart. Colour coding as per table below.

| Area | Likely remains  | Likely integrity   | Significance/potential  |
|------|---|--|---|
| Blue | Domestic discard, underfloor deposits, structure, drains, paving etc. associated with post 1858 housing and 100 years of occupancy. | Likely to be reasonably intact, the only disturbance event being the demolition of those buildings and the c1958 construction of the current Roberts building. The building being largely laid out as a 'clear span' building and the likely filling of the site to build up the level is likely to have preserved remains.  | Of some archaeological interest in demonstrating the evolution of the site and how the 'higher class' fringe of Wapping developed alongside the reinvigoration of the area resulting from the nearby railway station. Nonetheless, remains of 1870s+ buildings and occupational debris are not considered to be of the highest significance.<br><br>Whilst it is likely that there are remains of these buildings and occupation deposits in this area, with the low level of significance of these remains it is concluded that these are of <b>low archaeological potential</b> . Note that as per below, deeper deposits in this area are likely to be of high archaeological potential. |
|      | Possible ancillary structures and artifacts relating to the government slaughterhouse.  | Unknown. The exact nature of any ancillary infrastructures relating to the slaughterhouse is unclear. It is also not known how thoroughly the site was demolished/cleansed prior to the post-1860 construction of the residences in this location. It is likely that the level of the site was built up following the demolition of the slaughterhouse and prior to construction of the residences which would act to preserve earlier archaeological remains. | Of high significance as Hobart's first large-scale meat processing facility and the government's attempt to regulate the meat industry.<br><br>Until a more adequate knowledge is gained as to the integrity of any slaughterhouse remains, these remains must be considered to be of <b>high archaeological potential</b> .  |

|     |   |  |   |
|-----|---|--|---|
| Red | Domestic discard, underfloor deposits, structure, drains, paving etc. associated with post 1870 housing and ~80 years of occupancy. | Likely to be reasonably intact, the only disturbance event being the demolition of those buildings and the c1958 construction of the current Roberts building. The building being largely laid out as a 'clear span' building and the likely filling of the site to build up the level is likely to have preserved remains.  | <p>Of some archaeological interest in demonstrating the evolution of the site and how the 'higher class' fringe of Wapping developed alongside the reinvigoration of the area resulting from the nearby railway station. Nonetheless, remains of 1870s+ buildings and occupational debris are not considered to be of the highest significance.</p> <p>Whilst it is likely that there are remains of these buildings and occupation deposits in this area, with the low level of significance of these remains it is concluded that these are of <b>low archaeological potential</b>. Note that as per below, deeper deposits in this area are likely to be of high archaeological potential.</p> |
|     | Structure, artifacts and ancillary infrastructure relating to the actual footprint of the government slaughterhouse.                | Unknown. The exact nature of the slaughterhouse is not known, although depicted as a masonry building. It is also not known how thoroughly the site was demolished/cleansed prior to the post-1870s construction of the residences in this location. It is likely that the level of the site was built up following the demolition of the slaughterhouse and prior to construction of the residences which would act to preserve earlier archaeological remains. | <p>Of high significance as Hobart's first large-scale meat processing facility and the government's attempt to regulate the meat industry.</p> <p>Until a more adequate knowledge is gained as to the integrity of any slaughterhouse remains, these remains must be considered to be of <b>high archaeological potential</b>.</p>  |

|        |  |   |  |
|--------|--|---|--|
| Green  | <p>Fill from the filling of the rivulet following drainage works c1916-25.</p> <p>Remains of infrastructure used to control the Domain/Park Street Rivulet (e.g. walls, channels etc.).</p> <p>Remains of the natural rivulet bed.</p> | <p>It is unclear what methods were used to fill the rivulet and how thoroughly any associated infrastructure was demolished. At least two sewer mains are shown on the 1936 plans for the Roberts building which would have impacted the integrity of this part of the site. The foundations of the Roberts building were substantial (probably necessitated by the less stable rivulet bed) which would have further impacted upon any archaeological remains.</p> | <p>Whilst there may be some artifacts (discard/fill) and ancillary structures of archaeological interest and/or relating to other themes across the site/area in this area, and insights into filling methods may be of some value for understanding site formation processes across the site, this area is likely to have been highly disturbed and of low significance in any case.</p> <p>Overall, this area is considered to have <b>low archaeological potential</b>.</p> |
| Yellow | <p>Area where there appears to have been little/no historical development (i.e. yard space).</p>   |   | <p>Although there were no known buildings in this area, proximity to such an intensively utilised area means that there may be significant artifacts (discard/fill) and ancillary structures of archaeological interest and/or relating to other themes across the site/area. There is also the possibility that this area may have remains of undocumented buildings.</p> <p>Overall, this area is considered to have <b>medium archaeological potential</b>.</p>             |

|        |   |  |   |
|--------|---|--|---|
| Orange | Remains of early residential development (pre-c.1819) and the woolstapling and fellmonger businesses. | These remains are likely to be largely intact, with only a single phase of development occurring post their demolition (c1925) and a high likelihood that extensive filling of the site was undertaken post-demolition of the earlier buildings. That development pre-dates mechanical excavation and the large and relatively open nature of that building, coupled with filling to level the site and bring it to the new street level is likely to have had minimal archaeological impact and acted to preserve underlying remains. | <p>Of high significance as representing an early area of residential development in the Wapping (and general city fringe) area. Also of high significance as an early and long-running colonial industry.</p> <p>Overall, this area is considered to have <b>high archaeological potential</b>.</p> |
|--------|---|--|---|

Accordingly, the following archaeological management policies are recommended:

1. Any excavation proposed in areas of **high archaeological potential** must be preceded by an archaeological impact assessment, and if necessary an archaeological method statement, which details measures to be taken to avoid or mitigate impact upon the archaeological resource. That method statement must be in accordance with industry standard (e.g. the Tasmanian Heritage Council's Practice Note 2 – *Managing Historical Archaeological Significance in the Works Application Process*) and implemented in the works process.
2. Any excavation in areas of **moderate archaeological potential** must be monitored by a qualified historical archaeologist, and if any significant remains (as guided by the commentary on expected remains above) are encountered, then these must be dealt with in accordance with industry standard (e.g. the Tasmanian Heritage Council's Practice Note 2 – *Managing Historical Archaeological Significance in the Works Application Process*).

Note that works as per above are likely to require a development application to Hobart City Council, who will assess the acceptability of the approach to archaeology as part of the development appraisal process.

3. Generally, no archaeological input is required for excavation in areas of **low archaeological potential**, however any unexpected finds must be reported to a qualified historical archaeologist who is to assess their significance and deal with any significant finds as per (1) and (2) above. There is merit in an archaeological inspection of initial excavation in this area in order to refine archaeological judgments and to broadly document site formation processes in that area (e.g. rivulet filling/diversion). If it is found that this area has a higher than expected archaeological potential, then that part of the site is to be dealt with as per the provisions for high or medium archaeological potential at the discretion of the archaeologist.
4. Where possible, the preference is to not disturb archaeological remains, however it is acknowledged that the feasible redevelopment of the site may not be possible without doing so. Consideration should be given to any development design to minimise potential impact, however if this is not feasible the above policies (and implementation of method statements pursuant to those policies) are considered sufficient to yield the archaeological potential of the site. An archaeologist should be

included in the project design team in order to manage archaeology as part of an iterative process between the client, archaeologist, designer(s) and permit authorities.

5. Consideration should be given in any redevelopment of the site to incorporate archaeological remains (e.g. as interpretation) however this should not inhibit the feasible redevelopment of the site.
6. A test-trenching program, or geophysical investigations may be employed to refine the archaeological judgments outlined in this document and to better guide the design and implementation process (note that test-trenching may require development approval).
7. All results from any archaeological work on the site should be made widely available in order to support the ongoing research of the Wapping area (and wider Hobart/early Tasmania)

#### 4. Archaeological Impact Assessment

A proposal has been formulated by S Group Architecture (Launceston) for a large mixed-use development of the subject site. The proposed project is detailed on drawings *Collins St, A01-09* (22/08/2016) and of particular relevance to archaeological management the *Proposed Footing Zones* drawing by Gandy and Roberts Consulting Engineers (Drawing 16.0253 SK100 Rev P1), as per Figure 4.1 below).

Figure 4.1 – Indicative footing plan, (Gandy and Roberts Drawing 16.0253 SK11 Rev P1). Note that the colour coding on this figure does not relate to archaeological zoning.

The following 'categories' of excavation/possible archaeological impact are considered here, with responses to each formulated in Section 5 (archaeological method statement):

#### **4.1. Wide, but shallow clearance across the site.**

Insofar as ground disturbance, the project proposes that the site will be cleared of all current buildings, paving, services etc. generally do a depth not exceeding 500mm (with the exception of current building footings and services). It is expected that this level of clearance will only be into modern and non-significant fill, which the SoHAP has predicted to be anything up to two metres in depth. Section 5 proposes a strategy for confirming the depth and likely extent of such fill in order to verify the expectation that shallow but wide excavations will have no archaeological impact and that similarly the excavation of components of extant buildings and current services will also have no archaeological impact. If the depth and extent of fill is less than predicted (i.e. if site clearance might be expected to reach levels of significant archaeological remains), then the archaeological method statement will propose strategies to manage that impact.

#### **4.2. Excavation for pile caps and drilling for piles.**

The foundation system for the proposed building is intended to be a series of piles, drilled and/or driven to bedrock upon which each array of piles will have a pile cap. As per the Gandy and Roberts drawing, it is proposed that there will be 21 of these pile arrays and caps, each 3.0mx3.0m by 1.5 metres deep (cap depth), plus another 7 larger arrays and caps each 3.0m x 7.0m. These pile arrays will therefore require disturbance of around 336 square metres of the site (approximately 11% of the total site area).

Depending on the location of these pile arrays, they are likely to have some archaeological impact. The base cap will be 1.5 metres deep, plus an additional depth required for the ground floor, which, depending on fill levels, may reach significant archaeological layers.

The following Table considers whether the location of each of these pile arrays is likely to have any archaeological impact and the archaeological remains possibly encountered. In the absence of complete broadscale excavation of the site, it is not considered feasible to plan pile locations to avoid archaeological remains. Even if that approach was feasible, it may not be possible to do so without substantial disruption to the structural specifications and layout of the proposed building, therefore it is considered a more

pragmatic approach to concede that the drilling/piling process *will* have unavoidable impact and that mitigation strategies are the most prudent way of addressing that impact.

Archaeological input into the actual drilling/piling process is somewhat futile – given that the drilling for the piles essentially cuts through and destroys the archaeological resources before any inspection can be made. Whilst spoil can be inspected, the differentiation between fill and in-situ archaeological remains, once drilled, is practically impossible to differentiate.<sup>4</sup> Accordingly, the archaeological method statement acknowledges that no meaningful archaeological data can be yielded from those works and proposes other mitigation strategies to yield archaeological potential as part of the overall site development process. Archaeological input into the excavations for the pile caps, however, is a method which can yield archaeological data between the basal depth of non-significant fill and the base level of the pile cap, which is further detailed in Section 5.

#### **4.3. Excavation for other deep structures (e.g. lift bases etc.).**

As well as the pile arrays, the scheme proposes a number of excavations required for lift and crane foundations and overrun shafts. Three smaller lift/stair bases are proposed, each approximately 4.0x4.0 metres and require excavation to 2.0 metres (plus floor depth). The main lift area (and crane base) required a foundation approximately 15.0 x 15.0 metres to 3.0 metres depth (plus floor depth). Combined, these areas therefore constitute disturbance to approximately 237 square metres (approximately 9% of the total site area). In addition, a series of strip footings to a depth of 1.0 metre (plus floor depth) – one running perpendicular off the Collins Street frontage and another running the length of both Ragged Lane and the boundary of the site and the Old Woolstore. These footings are proposed to be approximately 1.5 metres wide and with an overall (combined) length of 140 metres, which constitutes approximately 210 square metres of the site (approximately 7% of the total site area).

As per the excavation required for the pile caps, these excavations have the potential to impact upon archaeological remains, however do offer the opportunity for archaeological input as part of the works process to yield archaeological potential and mitigate such impact.

---

<sup>4</sup> Note that the cores from geotechnical investigations undertaken by Scherzic on the site in early 2015 were archaeologically inspected which were completely inconclusive from an archaeological perspective given the inability to differentiate between fill, rubble and in-situ archaeological remains.

#### **4.4. Obscuring the preserved archaeological remains**

Aside from the excavations required to facilitate the proposed development, another consideration arising from the development is that the proposed almost total site coverage which will essentially obscure the ability to investigate the archaeological resource of the site during the life of that building. Noting that the excavations described above constitute only around 27% of the total site area, there is likely to be a vast amount of archaeological remains which are not disturbed. Given the high degree of archaeological potential of the site, coupled with the extent of work which has been done across the Wapping area over the last 20 years, it is considered that the obscuring of the ability to investigate this site is an impact which will arise from the proposed development. Conversely, it could also be argued that the fact that the building will essentially 'seal' a large proportion of the archaeological resource with minimal disturbance that a positive outcome for 'future archaeology' can be achieved.

It is considered that the proposed archaeological program detailed in Section 5 provides a very good sampling of the archaeological themes of the site, yielding some of the archaeological potential of the site, whilst the remaining potential will be left in-situ.

**The following Figures depict the proposed excavation locations in relation to the areas of archaeological potential, and more specifically likely building (and other feature) footprints as per Section 3.3:**

Figure 4.2 – Overlay of the proposed excavation areas (hatched) as per Figure 4.1 over a recent aerial photograph (GoogleEarth).

Figure 4.3 – Archaeological zoning plan for 2 Collins Street – Blue – 1860s residential, Red – 1860s residential over 1820s slaughterhouse, Green – rivulet and disturbed area, Yellow – Historical yardspace, Orange – Pre 1820s+ residential and commercial development. See expanded definitions of these colour codes on pp68-71.

Figure 4.4 – Overlay of the footprint of the pre1827 buildings (light blue) in relation to the proposed excavation areas (hatched) – drawn from the 1827 Sharland survey.

Figure 4.5 – Overlay of the footprint of the pre1830 buildings (blue) in relation to the s proposed excavation areas (hatched) – drawn from the c1830 survey.

Figure 4.6 – Overlay of the footprint of the pre1839 buildings (green) in relation to the proposed excavation areas (hatched) – drawn from the 1839 Frankland Survey.

Figure 4.7 – Overlay of the footprint of the pre1841 buildings (yellow) in relation to the proposed excavation areas (hatched) – drawn from the 1841 Census map.

Figure 4.8 – Overlay of the footprint of the pre1841 buildings (orange) in relation to the proposed excavation areas (hatched) – drawn from the 1841 Sprent map.

Figure 4.9 – Overlay of the footprint of pre 1910 buildings (dark green) in relation to the proposed excavation areas (hatched). From the 1910 HCC rivulet diversion plan.

Figure 4.10 – Composite overlay of the footprint of all known pre-1910 buildings and site features (colours as per coding above) in relation to the proposed excavation areas (outlines only – numbers refer to the table below).

The following table lists each excavation area (as numbered on the above Figures) and considers the likely potential and significance of each area and the possible impact arising from the proposed development. Note that the statements of possible impact below are based on the assumption that the site has 1-2 metres of non-significant fill across it – these statements may need to be revised should additional information on the nature, extent and variability of that fill come to hand (e.g. through test trenching or initial trenching).

The terminology relating to significance used here has been derived from Section 3.4, whilst the following terminology has been used here to describe impact:

- High:** Where the proposed development is likely to impact all or most of that feature, or a smaller portion of a feature of high significance.
- Medium:** Where the proposed development is likely to intersect that feature, but only a small portion of it.
- Low:** Where the proposed development is not likely to reach the depth of the feature or be likely to be clear of the footprint.

This table is to be read in conjunction with Figure 4.10, which shows the likely physical location of particular site features, as well as Figure 4.3 and explanatory definitions on pp.68-71 which details the archaeological zoning for the site:

| Area | Excavation for | Dimensions (length x breadth x depth) (metres) | Area of potential   | Specific site   | Possible impact                                 |
|------|----------------|--|---|---|---|
| 1    | Pile cap       | 3.0x3.0x1.5                                    | Domestic discard, underfloor deposits, structure, drains, paving etc. associated with post 1858 housing and 100 years of occupancy. Likely high integrity but low archaeological potential and significance.<br><br>Possible ancillary structures and artifacts | On the edge of the footprint of a post-1858 house as per the 1910 survey and 1946 aerial photo. | Low impact on a feature of low significance.    |
| 2    |                |  |   | Within the footprint of a post-1858 house as per the 1910 survey and 1946 aerial photo.         | Medium impact on a feature of low significance. |

|   |  |             |  |  |  |
|---|--|-------------|--|--|--|
|   |  |             | relating to the government slaughterhouse. Integrity unknown. Likely high integrity, significance and archaeological potential (subject to a better understanding of disturbance of earlier remains).        |  |  |
| 3 |  |             |  | Within the footprint of a post-1858 domestic outbuilding as per the 1910 survey and 1946 aerial photo.   | Medium impact on a feature of low significance.    |
| 4 |  | 7.0x3.0x1.5 |  | On the edge of the footprint of a post-1858 house as per the 1910 survey and 1946 aerial photo.  | Low impact on a feature of low significance.       |
| 5 |  | 3.0x3.0x1.5 |  | Wholly inside the footprint of the slaughterhouse as per the 1843 Sprent survey).<br><br>On the edge of the footprint of a post-1858 house as per the 1910 survey and 1946 aerial photo. | High impact upon a feature of high significance.   |
| 6 |  |             | Domestic discard, underfloor deposits, structure, drains, paving etc. associated with post 1870 housing and ~80 years of occupancy. Likely high integrity but low archaeological potential and significance. | Intersected by a wall on the c1830 survey.   | Medium impact on a feature of medium significance. |
| 7 |  | 7.0x3.0x1.5 |  | Almost wholly inside the footprint of the slaughterhouse as per the 1827 Sharland survey.  | High impact upon a feature of high significance.   |
|   |  |             | Structure, artifacts and ancillary infrastructure relating to the actual footprint of the government slaughterhouse. Likely high integrity, significance and archaeological potential                        | Within the footprint of a post-1858 house as per the 1910 survey and 1946 aerial photo.  |  |
| 8 |  |             |  | Wholly inside the footprint of the slaughterhouse as per the 1827 Sharland survey.   | High impact upon a feature of high significance.   |

|    |  |             |  |  |   |
|----|--|-------------|--|--|---|
|    |  |             |  | Partially inside the footprint of the slaughterhouse as per the 1843 Sprent survey).<br><br>Within the footprint of a post-1858 domestic outbuilding as per the 1910 survey and 1946 aerial photo. |   |
| 9  |  | 3.0x3.0x1.5 | Fill from the filling of the rivulet following drainage works c1916-25.  | On most early maps, within the course of the rivulet and or dissected by rivulet walls.  | Low impact upon features likely to be highly disturbed.   |
| 10 |  |             |  |  |   |
| 11 |  | 7.0x3.0x1.5 |  |  |   |
| 12 |  |             |  |  |   |
| 13 |  | 3.0x3.0x1.5 | Remains of infrastructure used to control the Domain/Park Street Rivulet (e.g. walls, channels etc.).  |  |   |
| 14 |  |             | Remains of the natural rivulet bed. Likely to be highly disturbed and of low archaeological potential.   |  |   |
| 15 |  |             | Area where there appears to have been little/no historical development (i.e. yard space). Probably low disturbance therefore of medium archaeological potential as the area may yield remains of undocumented buildings and activities related to a very early developed part of the site. | Distinctly intersected by a rivulet wall on the 1910 survey.   | Low impact on a feature of low significance (and/or highly disturbed).                              |
| 16 |  |             |  | No specific features shown on any historic map in this area despite likely intensive use of this area.   | Unknown impact upon an area of medium significance, largely because that area is poorly documented. |
| 17 |  |             |  | Wholly inside the footprint of an unknown building as per the 1843 Sprent survey).<br><br>Just on the edge of an unknown building as per the 1841 census map.                                      | High impact upon an area of high significance.  |
| 18 |  |             |  | Just on the edge of an unknown building as per the 1841 census map and the 1839  | Medium impact upon an area of high significance.  |

|    |                                |                      |  |  |  |
|----|--------------------------------|----------------------|--|--|--|
|    |                                |                      |  | Frankland survey.<br><br>Partly within the footprint of an unknown pre-1910 building.  |  |
| 19 |                                |                      |  | Partly within an unknown building as per the 1839 Frankland survey.  | Medium impact upon an area of high significance.   |
| 20 | Lift/stair core and crane base | Approx 15.0x15.0x3.0 | (straddles the areas described in 15-19 and 21-32)   | <p>Partly inside the footprint of two unknown buildings (possibly the fellmongery and a domestic building) as per the 1841 census map (one of those buildings shown on the 1839 Frankland survey).</p> <p>Notably absent of development on the 1843 Sprent survey.</p> <p>Intersected by a wall on the c1830 survey.</p> <p>Partly within the footprint of an unknown pre-1910 building.</p> | <p>The southern and eastern edges of this area are probably the most likely to have features of high significance upon which the proposal will have high impact.</p> <p>The remainder of this area is poorly documented historically and a very early settled area which is of medium significance and the proposal will have high impact.</p> |
| 21 | Pile cap                       | 3.0x3.0x1.5          | Remains of early residential development (pre-c.1819) and the woolstapling and fellmonger businesses. Likely high integrity, significance and archaeological potential. Significant remains likely to be deeply buried in fill (possibly up to 2.0 metres deep). | Partly within the footprint of an unknown pre-1910 building.   | Medium impact on a feature of medium significance.   |
| 22 |                                |                      |  | <p>Partly inside the footprint of an unknown building (possibly the fellmongery) as per the 1841 census map and the Frankland 1839 survey.</p> <p>Intersected by a wall on the c1830 survey.</p>   | Medium impact upon an area of high significance.   |

|    |                |                    |  |   |  |
|----|----------------|--------------------|--|---|--|
|    |                |                    |  | Partly within the footprint of an unknown pre-1910 building.  |  |
| 23 |                |                    |  | Partly inside the footprint of an unknown building (possibly the fellmongery) as per the Frankland 1839 survey.<br><br>Intersected by a wall on the c1830 survey.                   | Medium impact upon an area of high significance. |
| 24 |                | 7.0x3.0x1.5        |  | Wholly inside the footprint of an unknown building as per the 1843 Sprent survey (probably the fellmongery).<br><br>Intersected by a wall on the c1830 survey.                      | High impact upon an area of high significance.   |
| 25 |                | 3.0x3.0x1.5        |  | Partly inside the footprint of an unknown building as per the c1830 survey and 1843 Sprent survey (probably the fellmongery)  | Medium impact upon an area of high significance. |
| 26 |                | 7.0x3.0x1.5        |  | Wholly inside the footprint of an unknown building (possibly the fellmongery) as per the Frankland 1839 survey.<br><br>Partly within the footprint of an unknown pre-1910 building. | High impact upon an area of high significance.   |
| 27 |                | 3.0x3.0x1.5        |  | Partly within the footprint of an unknown pre-1910 building.  | Low impact on a feature of medium significance.  |
| 28 | Lift base core | Approx 5.0x6.0x2.0 |  | Wholly inside the footprint of an unknown building as per the 1843 Sprent survey (probably the fellmongery).<br>Partly within the footprint of an unknown pre-1910 building.        | High impact upon an area of high significance.   |
| 29 |                | Approx 4.0x4.0x2.0 |  | Just on the edge of an unknown building as  | Medium impact upon an area of high               |

|    |               |                    |   |  |  |
|----|---------------|--------------------|---|--|--|
|    |               |                    |   | per the 1827 Sharland, c1830 and 1839 Frankland surveys.   | significance.  |
| 30 |               |                    |   | Partly inside the footprint of an unknown building as per the 1827 Sharland, c1830 survey, the 1843 Sprent survey and 1839 Frankland survey (possibly domestic)  | Medium impact upon an area of high significance.   |
| 31 | Pile cap      | 3.0x3.0x1.5        |   | No specific features shown on any historic map in this area despite likely intensive use of this area.   | Unknown impact upon an area of medium significance, largely because that area is poorly documented.                                  |
| 32 |               |                    |   | No specific features shown on any historic map in this area despite likely intensive use of this area.   | Unknown impact upon an area of medium significance, largely because that area is poorly documented.                                  |
| 33 | Strip footing | Approx 7.0x2.0x1.0 |   | Partly inside the footprint of an unknown building as per the 1827 Sharland, c1830 survey, the 1843 Sprent survey and 1839 Frankland survey (possibly domestic).<br><br>Partly within the footprint of an unknown pre-1910 building. | Low impact on a feature of high significance.  |
| 34 |               |                    | Crosses the edge of all of the above areas. | Cuts through the footprint of the government slaughterhouse and another (unknown) building as per the c1830 and 1843 Sprent surveys.   | Low impact on features of high significance on the line of wall running along the Woolstore boundary (excluding the 'Rivulet' area). |

Given that the above table has considered the significance of the archaeological resource (closely linked to their archaeological potential) and the likelihood that the proposed development will impact a number of areas of different significance to different degrees, the following matrix broadly details the level of archaeological input deemed to be required to mitigate that impact, which will be further detailed in Section 5:

| Significance | Impact |        |     |
|--------------|--------|--------|-----|
|              | High   | Medium | Low |
| High         |        |        |     |
| Medium       |        |        |     |
| Low          |        |        |     |

Accordingly, the following colour code has been adopted to consider significance in-light of the integrity of that particular element:

- **Red** – Controlled archaeological investigation required ahead of the works program.
- **Orange** – Either controlled archaeological investigation required ahead of the works program, or archaeologically controlled monitoring of the works program.
- **Green** – Post excavation inspection, with call-in provision for unexpected finds.
- **Blue** – No archaeological input required.

Again note that the predicted impact is likely to require review once a better understanding of the depth, extent and variability of non-significant fill across the site is known.

## 5. Archaeological method statement

As detailed in Section 4, the proposed development is expected to have impact upon significant archaeological remains in approximately 20 locations across the site – constituting around 20% of the site area. With the exception of the main lift/crane foundation (i.e. 20) and the major strip footing (i.e. 34), these areas are limited to (generally) 3.0x3.0 metre and 3.0x7.0 metre areas which essentially are a sampling across the entire site. Each of these will be approached from a practical sense as individual excavations designed to respond to the practical works need, but also to contribute to the research questions set in Section 3.4. Whilst individual research questions have not (at this stage) been set for each of these areas, the general questions detailed in Section 3.4, coupled with the (as yet) known nature of the remains as detailed in the Table in Section 4, provides a framework within which each area will be approached – with the post-excavation analysis further refining research questions and contextualising the results.

As per Section 4, the 34 areas proposed for excavation have been provided with a colour code which summarises the level of archaeological input required, namely:

- **Red** – Controlled archaeological investigation required ahead of the works program.
- **Orange** – Either controlled archaeological investigation required ahead of the works program, or archaeologically controlled monitoring of the works program.
- **Green** – Post excavation inspection, with call-in provision for unexpected finds.
- **Blue** – No archaeological input required.

### 5.1. Approach to works

#### Site setout

A surveyor will be engaged to undertake the site setout, as required by the construction contractor. As the archaeological program is essentially works driven, archaeological investigations will only be undertaken where essential for the facilitation of the development.

**Removal of current paving/flooring**

Concrete and asphalt will be cut from each area of investigation and removed by mechanical excavator. Note that some areas are intersected by the walls of extant buildings – in these cases investigation may need to occur after demolition and prior to the overall works program (e.g. as part of an early works package).

**Removal of non-significant overburden**

Initially, an archaeologist will supervise the mechanical excavation of any non-significant overburden (e.g. fill, demolition rubble etc.) until such a point where any significant in-situ archaeological remains are encountered, then excavation will cease until an understanding of the nature of the remains is ascertained. This is expected to be substantial in some, if not all areas. Trenches must be shored when deeper than 1.5 metres. If no significant archaeological remains are encountered (to a depth of sterile ground level) then the provisions of 'cessation of archaeological input' (below) will be implemented and the SoHAP reviewed (considered unlikely in this instance unless disturbance is more substantial than predicted).

**Where significant archaeological remains are encountered**

In areas where significant archaeological remains are encountered, those areas will be gridded in an appropriate scale for horizontal control, and excavation will continue by hand (as per methodology below), to expose the remains in order to gain further understanding of their nature, and to thoroughly record them (as per methodology below). Mechanical excavation in those areas will only continue if the archaeologist is satisfied that this can occur without detriment (or if it is possible given the likely required depth of trenches) and that required outcomes can be achieved and that excavation by hand is not necessary.

The general approach to excavation will be by gridding the area in units which are responsive to the nature of the remains (e.g. in horizontal control units no greater than 1000x1000mm in areas where remains appear to be complex or concentrated, or in larger control units where remains are not as complex or concentrated) and removal of each contextual unit or spit (in depths as deemed appropriate by the archaeologist, according to the nature of the strata and/or remains). Apart from non-significant overburden and demolition debris, all spoil will be sieved through mesh of a gauge no greater than 12mm and any significant artifacts managed as per below.

It is expected that the stratigraphic sequence will still be relatively simple, that of post demolition (possibly including some disturbance), demolition, occupation (which may include several distinct phases including habitation and construction) and that of pre-construction (natural ground) – noting that some areas are likely to include at least two major distinct construction/occupation/demolition phases (e.g. slaughterhouse and residential). Excavation of remains within the defined contexts in reverse order of deposition will occur and each unit/context thoroughly recorded (as per below) prior to removal and investigation below that level.

As the archaeological program is responsive to the technical specifications of the footing layout of the site, it is not considered feasible to retain any of these archaeological features in-situ (except very deep features, i.e. below pile caps and which may be avoided by piles), therefore all archaeological remains which are within areas required for excavation to facilitate the development will be removed. Note that the areas to be excavated represent only around 20% of the total site area, therefore a substantial representative sample of archaeological remains will be retained beneath the development.

**Cessation of archaeological input**

Archaeological input will cease only when the archaeologist is satisfied that all significant remains have been investigated and thoroughly recorded, as per this method statement and any conditions of statutory approvals, or if sterile ground is encountered, and that adequate consultation has been undertaken with Hobart City Council's Heritage Officer to verify that all on-site archaeological requirements have been met (and archaeological conditions satisfied).

**Recording**

Any structure or significant cultural deposit encountered will be thoroughly recorded (both photographically and sketched at a scale of no smaller than 1:20, and plotted on the site plan at a scale of a scale no smaller than 1:200). The first preference will be to keep structural remains in-situ (and covered in geo-fabric, unless removal is necessary to further investigate lower strata (which may bear archaeological remains), or if there is no prudent and feasible alternative to removal to allow the development to proceed – in which case remains will be removed after thorough recording.

**Artifacts**

Any significant artifacts found during excavations will be retained, and have the required in-field conservation treatments and packaging undertaken. Artifacts will be bagged and tagged with spatial identification, and removed from the site (to a secure location) daily. Trench-notes will further detail the context and initial interpretation of artifacts.

Basic post-field curation of artifacts will be undertaken. Glass and ceramic items will be washed, whilst any organics or metals will be dry-brushed. Artifacts will be packaged in acid-free archive bags, tagged with appropriate tags, and boxed in archival quality boxes (with appropriate padding if required). Should any urgent conservation treatment be required, a professional Conservator will be consulted at the earliest possible instance. A detailed catalogue of artifacts will be included in the final report on works.

After any required analysis, these will be archived (with a copy of relevant reports) on-site of the new development (upon completion) – however at the owner's discretion and with the approval of Hobart City Council's Heritage Officer, alternative arrangements for storage and longer term curation/display may be made with an appropriate repository.

**Reporting requirements**

Excavations and monitoring must be recorded to appropriate professional standards (for example Section 4.2 of the Tasmanian Heritage Council's Practice Note 2). A final report must include (at a minimum):

- An executive summary of findings
- Details of the methodology employed
- Detailed interpretations of findings
- Relevant annotated photographs
- Site plans at a scale of no less than 1:200
- Trench plans at a scale of no less than 1:50
- Feature plans/sketches at a scale of no less than 1:20
- Photograph log

A copy of the final report, and project archive, will be deposited with Hobart City Council within 6 months of completion of the excavations.

**Public benefit**

It is not proposed that any public benefit program be implemented as part of the test trenching program, however it is proposed that an interpretation plan for the site will be developed which will incorporate archaeological findings with the overall site history to communicate the key historic and archaeological themes of the site to future users. The final report will be made publicly available, through appropriate repositories such as Hobart City Council, Heritage Tasmania and the State Library of Tasmania and archaeological research (by others) using the archaeological findings will be encouraged.

**Aboriginal heritage**

The SoHAP and this test trenching proposal deals solely with the management of historic cultural heritage, and has not considered Aboriginal cultural heritage. As some excavation is likely to occur in ground below the historic layer, there may be the chance of encountering Aboriginal cultural heritage. There is also the possibility of encountering Aboriginal heritage in a secondary context (e.g. fill, or post-contact-period deposition). Archaeological monitoring should be mindful of this possibility, and pursuant to s.14 of the Aboriginal Relics Act 1975, any Aboriginal heritage encountered should be immediately reported to the Tasmanian Aboriginal Heritage Office, and works in that particular area cease until instructions for that office are received. Critical timeframes must be mindful of this possibility, and have contingencies for downtime accordingly.

**Site contamination**

It is the responsibility of the proponent of the development to investigate the possibility of site contaminants, and to either verify that no site contaminants are present, or to take required measures to deal with any known or likely contaminants during excavation works (noting that any necessary decontamination works may require archaeological input).

## 1. Introduction and executive summary

This report has been commissioned by Fragrance Tas Hobart (Collins) Pty. Ltd., in order to inform the design process for a proposed redevelopment of 2 Collins Street, Hobart. The site currently comprises of a c1958 store, warehouse and office building (formerly Roberts), a large open former workshop and façade (formerly a garage) and a ground-level carpark area. Figures 1.1-1.2 depict the area which is subject to the proposed works, which comprises the subject site, a portion of a 3009 square metre site comprising of Certificate of Title 121603/1, on the north-eastern fringe of the Hobart CBD.

Figures 1.1-1.2 depict the area which is subject to the proposed works, which comprises the *subject site*.

The subject site is not listed on Table 1 (Places of Cultural Significance) of Part 22 of the Sullivans Cove Planning Scheme 1997 therefore the provisions of Part 22.4 (Conservation of Places of Cultural Significance) do not apply.

By the definition of 'Adjacent' in Part 22.3 of the SCPS97, the subject site is adjacent to 7 Macquarie Street (former Roberts Woolstore – façade facing Macquarie Street and Brooker Avenue only) and 18-26 Collins Street (former HCC/City Motors garage – façade only) which are both listed on Table 1 of Part 22 of the SCPS97.<sup>1</sup> Accordingly, any development of the subject site would be subject to the provisions of Part 22.5 of the scheme (which considers possible impact upon adjacent heritage places).

Accordingly, the brief for this project was:

- To identify the responsibilities arising from the adjacency to the above places.
- To provide conservation policy likely to be acceptable to the provisions of Part 22.5 of the scheme to guide the design process for development of the subject site.
- Once the conservation policy has been responded to in the design process, to undertake a heritage impact assessment against the conservation policy.

---

<sup>1</sup> Note that Figure 5 of the scheme (reproduced in part here as Figure 2.2) indicates a 'Place 20' (being the former Motor Registry building at 1 Collins Street) which has now been demolished – the listing has been removed from Part E, Table 1 but not from the Figure – it is therefore taken that 1 Collins Street is therefore not to be considered as an 'adjacent place' requiring consideration against Part 22.5.

Figure 1.1 - 2008 Aerial image of the area – the subject site depicted in red. GoogleEarth.

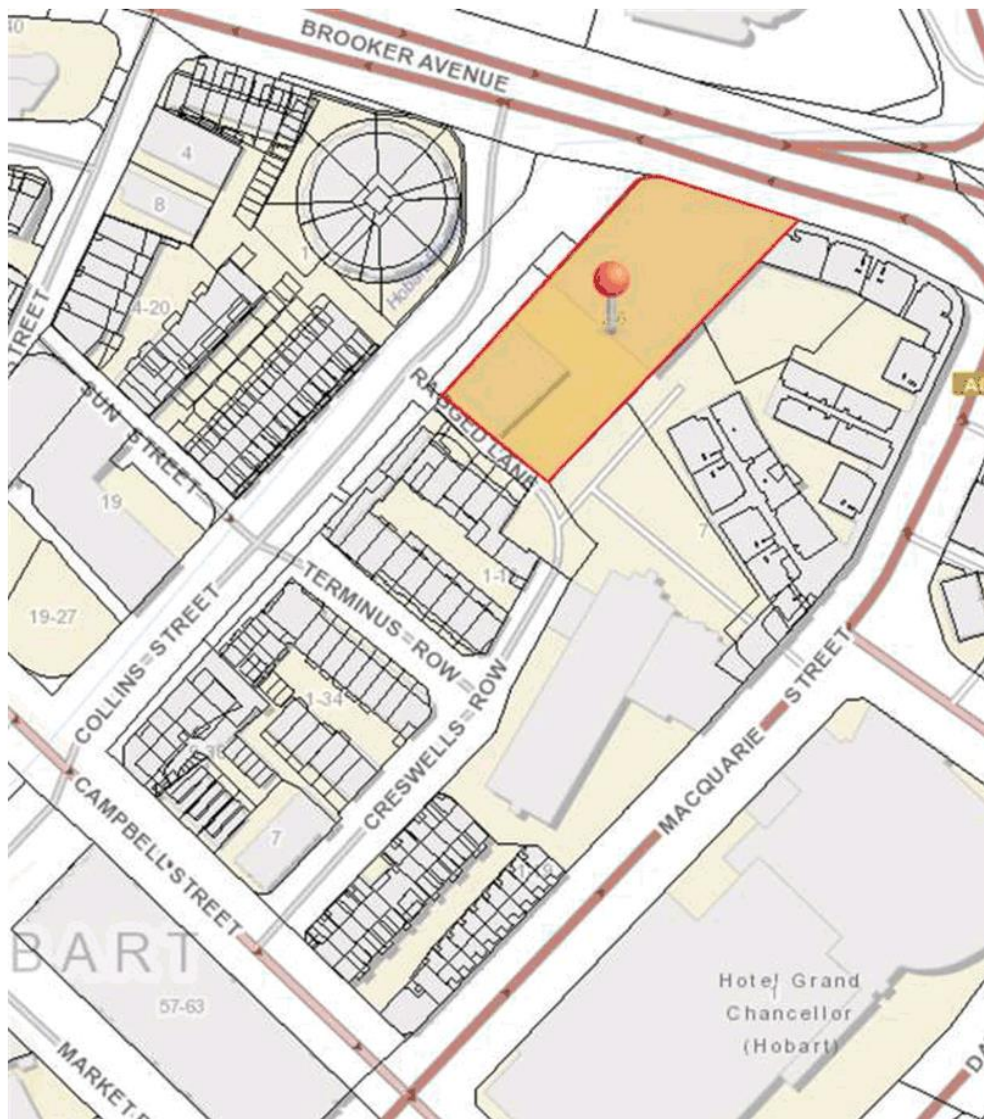

Figure 1.2 – Cadastral parcels comprising the subject site (orange) and surrounds ([www.thelist.tas.gov.au](http://www.thelist.tas.gov.au)).

The assessment of heritage impact been developed with regard to the Articles of the ICOMOS Australia *Burra Charter*<sup>2</sup> (in particular Article 8 – setting) and more specifically industry guideline documents including *Design in Context – Guidelines for Infill Development in the Historic Environment*.<sup>3</sup> Whilst development of the site has been touted, no preliminary design concept was supplied to the author of this document prior to the formulation of this document, therefore the findings of this document were developed without a firm predefined design in-place, therefore adhering to conservation planning best-practice in understanding the significance of the place, and adjacent places, and formulating policy to refine the final design which is to form the development application to Hobart City Council. This is consistent with Burra Charter and conservation planning principles of understanding the significance of a place, developing policy to guide decisions, then formulating responses to such.

## 2. Statutory heritage requirements

This report has been commissioned to consider the statutory heritage requirements arising from the proposed development. The following requirements are to be met in any development of the subject site:

### 2.1. Sullivans Cove Planning Scheme 1997

#### Table 1, Part 22 – Places of Cultural Significance

The subject site is not listed on Table 1 (Places of Cultural Significance) of Part 22 of the Sullivans Cove Planning Scheme 1997, therefore the provisions of Part 22.4 (Conservation of Places of Cultural Significance) do not apply.

By the definition of 'Adjacent' in Part 22.3 of the SCPS97, the subject site is adjacent to 7 Macquarie Street (former Roberts Woolstore – façade facing Macquarie Street and Brooker Avenue only) and 18-26 Collins Street (former HCC/City Motors garage – façade only) which are both listed on Table 1 of Part 22 of the SCPS97.<sup>4</sup> Accordingly, any development of the subject site would be subject to the provisions of Part 22.5 of the scheme (which considers possible impact upon adjacent heritage places).

---

<sup>4</sup> Note that Figure 5 of the scheme (reproduced in part here as Figure 2.2) indicates a 'Place 20' (being the former Motor Registry building at 1 Collins Street) which has now been demolished – the listing has been removed from Part E, Table 1 but not from the Figure – it is therefore taken that 1 Collins Street is therefore not to be considered as an 'adjacent place' requiring consideration against Part 22.5.

Figure 2.2 – The subject site (outlined in red) in relation to ‘adjacent’ heritage places as defined by Section 22.3 of the SCPS97 (denoted by green arrows).

Adapted from [www.thelist.as.gov.au](http://www.thelist.as.gov.au)

Accordingly, any proposed development of the subject site must either meet the ‘deemed to comply’ provisions of Part 22.5.4 the scheme:

*‘Building or works’ on other land within the planning area is ‘permitted’ in respect to this Schedule where it can be demonstrated that the following ‘deemed to comply’ standards can be met:*

*For ‘building or works’ on sites adjacent (as defined in clause 22.3) to a place of cultural significance:*

- *The height of 'building or works' adjacent to places of cultural significance must not exceed that of any building on the place, at a distance of less than 10 (horizontal) metres from the building; and*
- *The area of the facade of any new 'building or works' must not exceed that of the facade of an adjacent place of cultural significance by a factor of 2.*

Otherwise, the planning authority has the discretion to approve building or works which are not deemed to comply, by the provisions of Part 22.5.5 of the scheme:

*22.5.5 'Discretionary' 'Building or Works' 'Building or works' on land which cannot satisfy the 'deemed to comply' provisions of Clause 22.5.4 may be approved at the discretion of the Planning Authority. The following criteria must be taken into consideration in the assessment of all proposals for 'building or works':*

*'Building or works' adjacent to a place of cultural significance must not dominate that place when viewed from the street or any other public space, or be more prominent in the street than the adjacent place of cultural significance.*

*The area of a facade of any new building may be permitted to exceed that of the building on an adjacent place of cultural significance where the Planning Authority is satisfied that the visual impact of the apparent disparity of scale is not significant or that historic precedent warrants the scale disparity.*

*'Building or works' must complement and contribute to the specific character and appearance of adjacent places of cultural significance and the historic character of the Cove generally.*

*The location, bulk and appearance of 'building or works' must not adversely affect the heritage values of any adjacent or nearby place of cultural significance.*

*'Building or works' must not reduce the heritage value of any adjacent places of cultural significance by mimicking historic forms.*

**Table 2, Part 22 – Places of Archaeological Sensitivity**

The subject site is listed as a Place of Archaeological Sensitivity on Table 2 of Part 22 of the SCPS97; however, the archaeological requirements are addressed in a separate document.<sup>5</sup>

In summary, the historic heritage issues around the development of the subject site would be limited to the impacts upon adjacent heritage places, and whether any proposal meets the 'Permitted Building or Works' of Part 22.5.4 of the SCPS97 or whether it would be 'Discretionary Building or Works' under Part 22.5.5.

**2.2. Tasmanian Heritage Register**

The place is not listed on the Tasmanian Heritage Register, therefore is not subject to the provisions of the *Historic Cultural Heritage Act 1995*.

**2.3. Other statutory heritage registers/lists**

The place is not listed on any of the following statutory registers:

- The National Heritage List
- The Commonwealth Heritage List
- The World Heritage List

Nor is it included in any buffer zones arising from those lists. Therefore is not subject to the historic heritage provisions of the respective Acts which enable statutory input into development of places on those lists.

---

<sup>5</sup> *Statement of Historical Archaeological Potential, Archaeological Impact Assessment and Archaeological Method Statement – 2 Collins Street, Hobart, Tasmania* (October 2014, Revised September 2016). Praxis Environment.

### 3. Background history of the subject site

A detailed background history of the subject site is provided in the following document:

*Statement of Historical Archaeological Potential, Archaeological Impact Assessment and Archaeological Method Statement – 2 Collins Street, Hobart, Tasmania* (October 2014, Revised September 2016). Praxis Environment. [hereinafter referred to as the *Praxis Report*].

The current document should be read in conjunction with that document.

In addition, the following document gives a background to the wider (former) Roberts Limited site, of which the Woolstore building was formerly a part of (part of which is an adjacent place, but not part of the subject site):

A History of the Roberts Limited Site. Lindy Scripps (unpublished report), 1994.

Further historical information on the wider Wapping area which has provided some context for consideration of wider townscape issues in this document has been gleaned from the following documents:

*Down Wapping. Hobart's Vanished Wapping and Old Wharf Districts.* Wapping History Group. Blubber Head Press, 1998.

*Wapping, A New Place to Live.* Wapping Implementation Project. Site Histories. Tony Rayner, May 1995

*Archaeological and Heritage Fabric Assessment for Wapping* (Draft). Austral Archaeology, June 1995

*Parcel 4 Wapping. Former Hedberg Garage Building Site. CMP + Development guidelines.* Draft 2. Paul Davies Pty. Ltd., September 2003.

*Archaeological Excavation of Part of Parcel 2, Wapping. Incorporating Excavation Report, List of Appendices and a Guide to the Research Archive.* Austral Archaeology, November 2002.

*Wapping Parcel 4 Archaeological Test Excavation.* Report Prepared for DED and Tourism, Austral Tasmania, May 2009.

## **4. Adjacent heritage places and historical townscape context**

### **4.1. Townscape evolution of the area**

The vicinity of the subject site, including the immediately adjacent sites, is described in the praxis report, with the following figures drawn from that document as a means of providing some background context for the area.

#### **1820s**

The area had been developed to some degree by 1820, with early artworks depicting a number of small buildings in the block now bounded by Collins, Macquarie, Campbell Streets and the Hobart Rivulet. The rivulet from an early time, through to the 1910s severed the subject site and provided a very different townscape context to the two adjacent places discussed here – the former Roberts Woolstore is located in former marshland on the northern side of the rivulet, on/near the site of the Government Slaughterhouse which operated from the 1820s-1850s. The former HCC garage was however in more desirable 'high and dry' area to the south of the subject site. From the 1820s to the 1850s, the presence of the government slaughterhouse provided some disincentive to development near the rivulet, and that development was generally limited to industrial processes – although some capitalising on the proximity to the slaughterhouse, such as tanneries, fellmongers and candle makers. Figure 4.1.1 is an example of that early development and the emerging different townscape contexts on each side of the rivulet:

Figure 4.1.1 – Excerpt from an undated (c1820s) survey plan of Hobart (Tasmanian Archive and Heritage Office, PH-30-1-693-1).

### 1830s

By the 1830s, development had intensified in the area, with more infill to the central portion of the city block, but with an apparent apprehension for development closer to the rivulet – whether this was fear of flooding, or desire for distance to the slaughterhouse – or both. The Woolstore area remained as part of the slaughterhouse and mostly marshland, whilst the HCC Garage site was developed with small scale and ephemeral timber buildings. Figure 4.1.2 depicts the area at that time.

Figure 4.1.2 – Excerpt from a c1830s map of Hobart and surrounds. DPIWPE Map Hobart 5

**1840s**

A similar pattern of development continued through the 1840s, with further intensification to the south of the subject site. More permanent masonry buildings were replacing the earlier timber buildings, which is the case on the HCC Garage site. The rivulet still provided a great disjunction between the two areas being considered here although a new bridge across the rivulet in the line of Macquarie Street heralded an early step in forming a more cohesive city block in this area. Figure 4.1.3 depicts the area at that time.

Figure 4.1.3 - Excerpt from Sprent's 1841 map of Hobart and surrounds ([www.thelist.tas.gov.au](http://www.thelist.tas.gov.au)).

**1850-60s**

In the latter part of the 1850s, major change was precipitated by the removal of the government slaughterhouse to Macquarie Point, which offered a redevelopment site on the northern side of the rivulet. Park Street (now Brooker Avenue) was extended to meet Macquarie Street, and the site of the slaughterhouse was subdivided and developed as larger residential dwellings.

Development on the southern side continued, with industry burgeoning and promoting industrial development near the rivulet spreading through to the new section of Macquarie Street and gradually displacing residential development.

**1870s-1910**

The tables gradually turned from the 1860s onwards, with the new allotments fronting Park Street being sought after, particularly so with the coming of the railway in the 1870s. Older development to the south was interspersed with industrial sites and had become the 'slums' by which Wapping is renowned (and by which it borrowed its name comparatively). The Roberts presence on the site began in 1890 with the purchase of land on the corner of Park and Macquarie Streets and the soonafter construction of the building of which the façade remains. Nonetheless, the Hobart Rivulet still provided a very distinct separation between these two areas and prevented any form of cohesive townscape emerging in the vicinity of the subject site. This is demonstrated by Figures 4.1.4 - 4.1.6:

Figure 4.1.4 – 'Balloons eye view of Hobart' showing the c1820s building frontage (red arrow) and the c1840 conjoined buildings (blue arrow). Australasian Sketcher 10 May 1879.

Figure 4.1.5 – Excerpt from a 'Hobart Birds Eye' view, The Town and Country Journal Nov 17 1894 pp26-7.

Figure 4.1.6 – Excerpt from Mault's survey of Hobart 1894, the subject site depicted in red, the location of the HCC garage façade and the (then newly built) Roberts woolstore depicted in Green. Hobart City Council.

### 1910s

By 1910 it was apparently obvious that the Rivulet was impeding the orderly development of the area and the Hobart Corporation acquired the land required to divert the rivulet around Park Street and fill the rivulet where it ran through the subject site. With that initiative also came the piping of the rivulet under Collins Street. These major capital works commenced in 1916 and were not complete until 1923. Much earlier development was demolished by the Hobart Corporation and the land either then developed by the corporation (e.g. the former HCC garage) or on sold (e.g. the course of the filled rivulet within the subject site was sold to Roberts in 1926). Figure 4.1.7 depicts the immediate environs in 1910.

Figure 4.1.7 - Plan showing proposed new channel for the Hobart Rivulet. c. 1910, the subject site outlined in red. Tasmanian Archive and Heritage Office PWD 266/2494/6].

#### 1920-40s

The diversion of the rivulet and the Hobart Corporation involvement in the area stimulated much change during the 1920s, fueled also by expansion of Roberts. The earlier smaller-scale industry had largely been cleared in favour of larger scale Roberts and public corporation facilities (e.g. HCC garage, tramsheds etc) – a trend which continued through the 1930s. Figure 4.1.8 depicts the area c1925 and Figure 4.1.9 is from the 1946 aerial run of Hobart.

Figure 3.3.23 – Excerpt from an oblique aerial photograph of Hobart, c.mid-1920s. The subject site outlined in red. Tasmanian Archive and Heritage Office NS 892-1-64.

Figure 3.3.25 - The subject site taken from the 1946 aerial run of Hobart (Run 1, 10894).

**1950+**

During more recent years, the area has undergone a further metamorphosis, with residential development rapidly returning to the area with the disbursement of large commercial and semi-industrial uses. Divestment of property by Roberts, starting with the redevelopment of the Old Woolstore Apartment Hotel, removal of the former HCC garage and the tramsheds for the Terminus Row housing development and the early 2000s redevelopment of the former Motor Registry building as One Collins has seen the area become dominated with high-density housing and apartment development.

**The above commentary provides a very brief overview of the evolution of the area within which townscape development may be understood. It should be read in conjunction with the sources cited in Section 3. In summary, the subject site and adjacent places has evolved as:**

- Two disjointed areas, the slaughterhouse and early residential and industrial development separated by the Hobart Rivulet (c1820-1850).
- A 'flipping' of the above with gentrification of the northern area and a slum-like amalgam of residential and industrial development in the southern area (c1860-1920), still distinctly separated by the rivulet.
- Major environmental changes (diversion of the rivulet) and associated 'cleanup' of the slums heralding new inner-city development areas (1920s-50s).
- Urban regeneration with the divestment of large commercial/industrial holdings and a move to inner city high-density residential uses (1990s+).

This demonstrates the lack of cohesive or planned evolution of the area and how it has changed numerous times in response to changing needs, desires and development pressures as the wider townscape around it also evolves and circumstances change.

#### 4.2. Adjacent places – significance

As detailed in Section 2, although the subject site itself is not listed on Table 1 (Places of Cultural Significance) of Part 22 of the Sullivans Cove Planning Scheme 1997, however by the definition of 'Adjacent' in Part 22.3 of the SCPS97, the subject site is adjacent to 7 Macquarie Street (former Roberts Woolstore – façade facing Macquarie Street and Brooker Avenue only) and 18-26 Collins Street (former HCC/City Motors garage – façade only) which are both listed on Table 1 of Part 22 of the SCPS97. Accordingly, any development of the subject site would be subject to the provisions of Part 22.5 of the scheme (which considers possible impact upon adjacent heritage places).

In order to understand possible impact upon those places, it is necessary to have some understanding of the historic heritage values of those places, particularly within the context of their wider setting, in order to propose policy to guide any further development on the subject site.

Those adjacent heritage places are depicted on Figure 4.1.1 and are namely:

- The former Roberts woolstore Façade fronting Brooker Avenue and Macquarie Street (52)
- The former HCC/City Motors garage façade at 16-26 Collins Street (22)

The following considers the individual significance of each of those places, within their wider townscape context. Note that comprehensive histories of these places is beyond the scope of the current document, however sufficient background (mostly from secondary sources) has been gathered (as per Section 4.1) in order to draw the conclusions within this document consistent with *Burra Charter* process.

Figure 4.1.1 – 'Adjacent' heritage places as per the Part 22, Table 1 of the SCPS97 *Places of Cultural Significance*.

**4.1.1 – The former Roberts Woolstore Façade fronting Brooker Avenue and Macquarie Street**

The former Roberts woolstore façade is a single storey brick façade – the Brooker Avenue elevation being blank of apertures however with recessed panels articulation and a concrete rendered pediment/cornice on top of the walls. The first eight bays facing Macquarie Street (from the Brooker Avenue) are of similar wall configuration, however each recess has an arched-top double-hung window. The corner is rounded in three segments with entrance doors. The roof structure facing Brooker Avenue is of a saw-tooth form in brick above the pediment, which has more recently been further accentuated by a heightened roof with the end clad in corrugated galvanised iron.

The roof addressing Macquarie Street is a simpler hipped form, segmented on the corner. Further along Macquarie Street the building retains the same architectural styling, although more highly articulated and ornamented and heightens to two storey, upon which a higher interpretive saw-tooth roof structure has been more recently added.

An analysis of the building beyond the façade is beyond the scope of considerations arising from the inclusion of the façade on Part 22 Table 1 of the scheme.

Figure 4.1.1 – The Macquarie Street/Brooker corner of the former Roberts Woolstore façade. GoogleEarth.

Figure 4.1.2 – The Brooker Avenue facade of the former Roberts Woolstore. GoogleEarth.

Figure 4.1.3 – The Macquarie Street facade of the former Roberts Woolstore. GoogleEarth.

The following statements of significance are based on the national HERCON standard for statements of significance, based on the amount of information currently at-hand. Note that natural history values have not been assessed here, as these are

beyond the scope of this assessment. This statement of significance has been based upon the history of the place as outlined above, however could be further refined with more detailed investigations into the site history.

**A. Importance to the course, or pattern of our cultural or natural history.**

The former Roberts woolstore façade is of historic heritage significance as it demonstrates the later 19<sup>th</sup>-century expansion of the Wapping area into new land created by land drainage and rivulet diversion works and the evolution of Macquarie and Park Streets (Brooker Avenue) following the relocation of the earlier government slaughterhouse. The façade is representative of the wider Roberts site which occupied much of the block bounded by Collins, Macquarie, Campbell and Park Streets (Brooker Avenue) and was an important industry representing the statewide rural sector in Tasmania.

**B. Possession of uncommon, rare or endangered aspects of our cultural or natural history.**

The former Roberts woolstore façade is not considered to exhibit any rare or endangered aspects of our cultural or natural history.

**C. Potential to yield information that will contribute to an understanding of our cultural or natural history.**

Consideration of research (archaeological) potential is beyond the scope of the current document and as relevant to the subject site is considered elsewhere.

**D. Important in demonstrating the principal characteristics of a class of cultural or natural places or environments.**

The former Roberts woolstore façade is of some historic heritage significance in its ability to demonstrate the principal characteristics of the façade of a late c19th warehouse. The ability to demonstrate a more holistic warehouse has been limited by demolition of elements rear of the façade.

**E. Importance in exhibiting particular aesthetic characteristics**

The former Roberts woolstore façade in its own right is of limited aesthetic value as it is not part of any cohesive heritage streetscape nor offers any remarkable aesthetic characteristics.

**F. Importance in demonstrating a high degree of creative or technical achievement at a particular period.**

The former Roberts woolstore façade is not considered to demonstrate any high degree of creative or technical achievement.

**G. Strong or special association with a particular community or cultural group for social, cultural or spiritual reasons. This includes the significance of a place to Indigenous peoples as part of their continuing and developing cultural traditions.**

No particular community significance is ascribed to the former Roberts woolstore façade.

An assessment of the significance of the place to the Aboriginal community is beyond the scope of this assessment.

**H. Special association with the life or works of a person, or group of persons, of importance in our history.**

Whilst a detailed analysis of the history of Roberts is beyond the scope of the current assessment, the former Roberts woolstore façade may have some historic heritage significance as an early flagship building associated with a long-run Tasmanian owned company which is still in operation.

**4.1.2 – The former HCC Garage/City Motors façade**

The former HCC garage façade is a single storey brick façade comprising of a central arched entrance flanked by two additional arched entrances divided by a lower bay to each side, each with four arched windows. The lower portions of the walls are capped with glazed bricks laid on their ends beneath a painted concrete pediment/cornice upon which a brick parapet sits, following the central arch but squarely capping the flanking arches.

An analysis of the building beyond the façade is beyond the scope of considerations arising from the inclusion of the façade on Part 22 Table 1 of the scheme.

Figure 4.1.1 – The Macquarie Street/Brooker corner of the former Roberts Woolstore façade. GoogleEarth.

Figure 4.1.2 – The Brooker Avenue facade of the former Roberts Woolstore. GoogleEarth.

The following statements of significance are based on the national HERCON standard for statements of significance, based on the amount of information currently at-hand. Note that natural history values have not been assessed here, as these are beyond the scope of this assessment. This statement of significance has been based upon the history of the place as outlined above, however could be further refined with more detailed investigations into the site history.

**A. Importance to the course, or pattern of our cultural or natural history.**

The former HCC garage is of historic heritage significance as it demonstrates a major phase of change in the Wapping area arising from the diversion and undergrounding of the Hobart Rivulet in this area as well as the Hobart Corporation's purchase, clearance and reuse/onselling of the surrounds for post WW1 development, heralding the end of the Wapping slums and the new phase of larger commercial and public-use buildings in the area.

**B. Possession of uncommon, rare or endangered aspects of our cultural or natural history.**

The former HCC garage façade is not considered to exhibit any rare or endangered aspects of our cultural or natural history.

**C. Potential to yield information that will contribute to an understanding of our cultural or natural history.**

Consideration of research (archaeological) potential is beyond the scope of the current document and as relevant to the subject site is considered elsewhere.

**D. Important in demonstrating the principal characteristics of a class of cultural or natural places or environments.**

The former HCC garage façade is of some historic heritage significance in its ability to demonstrate the principal characteristics of the façade of an Inter-War era workshop. The ability to demonstrate a more holistic workshop building has been limited by demolition of elements rear of the façade.

**E. Importance in exhibiting particular aesthetic characteristics**

The former HCC garage façade in its own right is of limited aesthetic value as it is not part of any cohesive heritage streetscape nor offers any remarkable aesthetic characteristics.

**F. Importance in demonstrating a high degree of creative or technical achievement at a particular period.**

The former HCC garage façade is not considered to demonstrate any high degree of creative or technical achievement.

**G. Strong or special association with a particular community or cultural group for social, cultural or spiritual reasons. This includes the significance of a place to Indigenous peoples as part of their continuing and developing cultural traditions.**

No particular community significance is ascribed to the former HCC garage

An assessment of the significance of the place to the Aboriginal community is beyond the scope of this assessment.

**H. Special association with the life or works of a person, or group of persons, of importance in our history.**

Whilst the former HCC garage façade is associated with early c20th Hobart Corporation (i.e. HCC) activities, this is not considered to be sufficient for assignment of associative significance in the absence of strongly meeting other criteria.

#### 4.2 – Development policy for the subject site in relation to adjacent heritage places

Section 4.1 has considered the heritage values of individual buildings adjacent to the subject site – those values which are to be addressed in any development of the subject site, namely:

Both the former Roberts woolstore façade and the former HCC garage façade have some historical significance as they represent distinct and substantial periods of change in the overall evolution of the Wapping area (i.e. Criterion A) and that they represent examples of their respective building types (i.e. a late c19th warehouse and Inter-War workshop) albeit in a very limited capacity owing to only the retention of their façades.

That assessment has concluded that neither of these façades have any significant aesthetic values nor are they part of any cohesive or important heritage streetscape.

It is considered that the key heritage attributes of these façades are that they are representative of important periods of change and development in the Wapping area. The façades themselves are also representing of further change, now being part of new buildings which represent a further phase in the evolution of the Wapping area.

The Wapping area has markedly changed from its first few incarnations as discussed above and development of the subject site offers the opportunity for further such change. As per the comments above, the adjacent heritage places are themselves representative of such change. In the context of the subject site and the potential impact of any development upon adjacent heritage places, **it is not considered necessary to impose any specific heritage policy for the management of impact upon these adjacent places, as to defer to general planning considerations for an acceptable heritage outcome.**

Nonetheless, the following broad comments are made against each of the Performance Criteria under Part 22.5.5 of the scheme in order to address those criteria should any future proposed development not be able to meet the Acceptable Solutions of that Part:

| Performance Criteria  | Comments  |
|---|---|
| <i>'Building or works' adjacent to a place of cultural significance must not dominate that place when viewed from the street or any other public space, or be more prominent in the street than the adjacent place of cultural significance.</i>  | Given that the former Roberts woolstore and HCC garage façades are only 1-2 storey high and are merely facades with new and larger scale development behind, it is inevitable that practically any new development on the subject site will be of a larger scale and probably be more prominent than these places of cultural significance in the wider townscape context. This however is not seen as something which is likely to have heritage impact, as the places of cultural significance both derive part of their significance from being representative of the numerous major changes to the pattern of development of the Wapping area and that new development adjacent to these places can be seen as a continuum of that evolution of the area. Over 200 years this area of Wapping has evolved in several distinct stages with larger new forms replacing earlier and smaller scale development in response to the wider evolving townscape – recent developments such as the Old Woolstore apartments, One Collins, Terminus Row and the forthcoming Hedberg Garage development are examples of this new wave and reinvigoration of Wapping which is seen as an acceptable (if not desirable) new phase in the continuum of Wapping's history. To 'under develop' the subject site would perhaps therefore be inconsistent with thisprecedented tenor of development in the area therefore larger scale development would be consistent with the evolving pattern of development in the area. |
| <i>The area of a facade of any new building may be permitted to exceed that of the building on an adjacent place of cultural significance where the Planning Authority is satisfied that the visual impact of the apparent disparity of scale is not significant or that historic precedent warrants the scale disparity.</i> |   |
| <i>'Building or works' must complement and contribute to the specific character and appearance of adjacent places of cultural significance and the historic character of the Cove generally.</i>  | As facades, the value of these places is largely limited to their street frontages and contribution to a very limited area of the streetscape and townscape (although noting the visual prominence of the former Roberts woolstore being on the corner of a very busy thoroughfare). Individually they  |

|  |  |
|--|--|
|  | <p>have streetscape value however do not greatly contribute to any cohesive streetscape or character area. This area of Wapping is of a very diverse character with more recent and larger development typifying the latest phase of that area.</p>  |
| <p><i>The location, bulk and appearance of 'building or works' must not adversely affect the heritage values of any adjacent or nearby place of cultural significance.</i></p> | <p>This document has assessed the heritage values of those adjacent places of cultural significance and has concluded that their predominant significance derives from their ability to represent buildings indicative of major change phases in the Wapping area (i.e. late c19th larger scale commercialisation and Inter-War wholesale site redevelopment) – i.e. Criterion A. Their architectural values (Criterion D) are considered marginal (given that they are only façades and although the places themselves give provide some streetscape contribution they do not form part of any cohesive or important heritage streetscape.</p> <p>Any new development of the subject site has some potential to backdrop the places of cultural significance – this however is somewhat of a moot point given that these places are façades and that their own development has in effect already set the precedent for larger backdropping development.</p> |
| <p><i>'Building or works' must not reduce the heritage value of any adjacent places of cultural significance by mimicking historic forms.</i></p>                              | <p>Any development of the subject site should not attempt to emulate any particular historic form. This is particularly important in this location, given the evolving and diverse pattern of use and development of this area it would be undesirable to strongly emulate one particular aspect of that history over others. Nonetheless, subtle visual cues in the design of any new development may be drawn from any of those historic forms as part of an interpretive approach.</p>  |

## 5. Proposed development and commentary

A proposal has been formulated by S Group Architecture (Launceston) for a large mixed-use development of the subject site. The proposed project is detailed on drawings *Collins St, A01-09* (22/08/2016) and an Architect's Statement has been provided to accompany those drawings.

Section 4 of the current document has concluded that no specific heritage policy is considered necessary to guide development of the subject site and that the general planning provisions of the scheme are sufficient to guide the development of the site. Nonetheless, it is necessary that response be made to the Performance Criteria of Part 22.5.5 of the scheme (given that the proposal does not meet the Acceptable Solutions of that part) in order for the planning authority to exercise discretion to consider such development which is not deemed to comply.

The following commentary is made with regard to the current proposal:

| Performance Criteria   | Comments   |
|--|--|
| <i>'Building or works' adjacent to a place of cultural significance must not dominate that place when viewed from the street or any other public space, or be more prominent in the street than the adjacent place of cultural significance.</i> | <p>By the nature of the scale of the proposed development, a greater prominence than the places of cultural significance is inevitable – noting also that those places themselves are backdropped in their own right with new buildings of larger scale immediately behind their facades.</p> <p>The proposed development however provides a key 'courtesy' to the smaller scale street frontage of these places. Although a substantially taller development, the</p> |

|  |   |
|--|---|
| <p><i>The area of a facade of any new building may be permitted to exceed that of the building on an adjacent place of cultural significance where the Planning Authority is satisfied that the visual impact of the apparent disparity of scale is not significant or that historic precedent warrants the scale disparity.</i></p> <p><i>'Building or works' must complement and contribute to the specific character and appearance of adjacent places of cultural significance and the historic character of the Cove generally.</i></p> | <p>proposal has been formulated in such a way that the street frontages and closely-perceivable form of the building is a four storey podium, upon which the higher component of the development is stepped back from all edges. This is particularly evident in the immediate adjacency to the former Roberts woolstore façade, where the point of contact with that façade is of the lower form to provide a less abrupt and stepped linkage to the taller portion of the proposed building (not largely inconsistent with the abutment of the existing building). Further the proposed façade has been articulated in such a way that the apparent vertical scale is broken by means of a recessed ground floor and articulation of the lower floors through form, cladding, materiality and tone.</p> <p>From all close vantage points where the relationship between the adjacent places and the proposed development are viewable as a streetscape collective, the proposed development will read as a larger building than those adjacent, however in the scheme of the overall size of the building this design response has adequately mitigated the impact of such size in particular to near vantage points where the scale will not appear inconsistent with the tenor of recent development in the area (noting that this large-scale is acceptable, if not desirable, in any case as representing that long-precedented evolution of the Wapping area).</p> <p>The podium will provide the predominant backdrop to the adjacent places and from near vantage. Whilst the tower will be visible as a new element in the wider townscape from more distant vantage points, the perception of the tower will be somewhat disjointed to the near and street</p> |
|--|---|

|   |   |
|---|---|
|   | level relationship of the proposed development and adjacent places.   |
| <i>The location, bulk and appearance of 'building or works' must not adversely affect the heritage values of any adjacent or nearby place of cultural significance.</i> | As per the statements of significance formulated for the adjacent places in Section 4, their predominant significance derives from their ability to represent buildings indicative of major change phases in the Wapping area (i.e. late c19th larger scale commercialisation and Inter-War wholesale site redevelopment) – i.e. Criterion A. Their architectural values (Criterion D) are considered marginal (given that they are only façades and although the places themselves give provide some streetscape contribution they do not form part of any cohesive or important heritage streetscape. The proposed development offers another phase in the continuum of that evolution of the Wapping area – in fact provides a positive outcome in reinvigorating and activating that area in a manner consistent with the historically precedent rejuvenations of Wapping from which the adjacent places derive much of their significance. |
| <i>'Building or works' must not reduce the heritage value of any adjacent places of cultural significance by mimicking historic forms.</i>                              | The building does not mimic any historic form, however offers an evolution of the long-precedented regeneration of the Wapping area.  |

## Community Research 2017

October 2017

600 Tasmanian adults in the Greater Hobart area were interviewed by telephone between the 6<sup>th</sup> and the 10<sup>th</sup> of October 2017.

This report has been prepared by  
Enterprise Marketing and Research Services  
60 Main Road, Moonah TAS 7009

All enquiries should be addressed to:

## Summary of Key Findings

The Tasmanian research company, EMRS, was assigned to gather independent feedback from local residents in the City of Hobart and surrounding municipalities to assess community opinion regarding proposed new hotel developments in Hobart and the support or opposition to several building height limit options. The research was conducted between the 6<sup>th</sup> and 10<sup>th</sup> of October 2017, and 600 adult respondents were interviewed by telephone.

### Initial Support for New Hotel Developments in Hobart

- ✓ 68% initial support for new hotel developments in Hobart.

### Reasonable Support for Consideration of Increased Building Heights

- ✓ 46% would support buildings in Hobart up to a height of 75 metres;
- ✓ 20% would support buildings in Hobart up to a height of 180 metres; and
- ✓ Importantly, 25% were unable to give a definitive response or did not support any of the 3 heights proposed.

## Summary of Key Findings

### High Levels of Agreement on Benefits of New hotel Developments

- ✓ 90% agreed that proposed new hotel developments in Hobart would “provide employment and new jobs for Tasmanian’s”;
- ✓ 87% agreed they would “help meet the need for additional visitor accommodation in Hobart”; while
- ✓ 84% agreed they would “increase economic activity for the State”.

### Acknowledgement of Negative Aspects

- × Conversely, 76% also agreed the proposed new developments would “create more traffic and congestion in the city”;
- × “Lead to too many high-rise developments in the city” (56%); and
- × “Have a negative impact on the visual appeal of Hobart” (55%).

### Considered Support for New Hotel Developments Remains Steady

These are very similar to the levels of support recorded initially (68% support, 24% oppose), which indicates that respondents had already made up their minds in regards to new hotel developments and their support was not influenced by consideration of building height limits and statements for and against new hotel developments.

## Research Methodology

In order to collect the required information to meet all the research objectives, EMRS used a quantitative survey methodology, namely Computer Assisted Telephone Interviewing (CATI) and the administration of a questionnaire of approximately 5 minutes.

Quotas were put in place for gender and age. To further ensure that the results accurately reflected the demographic profile of the target population with regard to gender and age, weighting was applied where the quotas were not met.

The City of Hobart was the primary target, and as such, 400 surveys were completed within the LGA with the remaining 200 surveys completed in the LGAs of Brighton, Clarence, Glenorchy, Kingborough, and Sorell.

Any statistically significant variations in the results across the population subgroups have been highlighted in the demographic tables, with green denoting a significantly higher percentage and pink a significantly lower one. Significant variations presented in the tables have been remarked upon in the commentary accompanying the charts and tables.

†Percentages in these tables are unweighted.

## Initial Support for New Hotel Developments in Hobart

Q. Firstly, even if it is a slight leaning, would you say you strongly support, somewhat support, somewhat oppose or strongly oppose new hotel developments in Hobart?

When asked for their initial support of new hotel developments in Hobart generally, close to two-thirds of the total sample were in support, with the larger percentage (48%) of whom stated 'somewhat support'.

Around one quarter of those surveyed (24%) were opposed to new hotel developments in Hobart while the remaining 8% were unable to give a definitive response.

\*Percentages do not sum to 100 due to rounding.

## Level of Initial Support for New Hotel Developments in Hobart – by Demographic Group

Table 3 – Level of Initial Support for New Hotel Developments in Hobart  
(Percentage of respondents by demographic group)\*

| Demographic Group | TOTAL INITIAL SUPPORT | Strongly support | Somewhat support | TOTAL INITIAL OPPOSE | Somewhat oppose | Strongly oppose | Unsure/ no opinion |
|-------------------|-----------------------|------------------|------------------|----------------------|-----------------|-----------------|--------------------|
| <i>Total</i>      | 68                    | 20               | 48               | 24                   | 13              | 12              | 8                  |
| <i>Gender</i>     |                       |                  |                  |                      |                 |                 |                    |
| Male              | 75                    | 25               | 50               | 17                   | 9               | 7               | 8                  |
| Female            | 61                    | 14               | 46               | 32                   | 16              | 16              | 8                  |
| <i>Age</i>        |                       |                  |                  |                      |                 |                 |                    |
| 18 to 34 years    | 84                    | 17               | 67               | 15                   | 9               | 6               | 2                  |
| 35 to 44 years    | 66                    | 25               | 41               | 25                   | 18              | 7               | 9                  |
| 45 to 54 years    | 71                    | 25               | 45               | 17                   | 11              | 7               | 12                 |
| 55 to 64 years    | 66                    | 22               | 44               | 27                   | 14              | 12              | 8                  |
| 65 years or over  | 45                    | 14               | 31               | 42                   | 16              | 26              | 13                 |
| <i>Region</i>     |                       |                  |                  |                      |                 |                 |                    |
| Hobart LGA        | 66                    | 16               | 50               | 26                   | 15              | 12              | 8                  |
| Surrounding LGAs  | 72                    | 28               | 44               | 20                   | 9               | 11              | 8                  |

✓ Those aged 18 to 44 years were significantly more likely to state that they 'support' new hotel developments in Hobart, when compared to other age groups.

✗ Females were significantly more likely to oppose new hotel developments in Hobart (a combined total of 32%, compared to 17% of males).

✗ Those aged 65 years and over were significantly less likely to support new hotel developments (a total of 45%) and more likely to oppose them (a total of 42%, with a larger percentage who 'strongly oppose' – 26%).

\*Percentages may not sum to 100 due to rounding.

## Support for Maximum Height of Hotel Developments Proposed for Hobart CBD

*Q. There are currently a number of hotel developments proposed for Hobart. Thinking about the height of proposed hotel developments, would you support or oppose buildings in the Hobart CBD at...*

**Chart 2 – Support for Maximum Height of Hotel Developments Proposed for Hobart CBD**  
(Percentage of respondents who did not “strongly oppose” new hotel developments in Hobart)\*†

(n=513)

When asked about maximum heights for proposed hotel developments, more respondents indicated they would support buildings ‘up to a height of 45 metres’ (29%), followed by ‘up to a height of 75 metres’ (26%) and ‘up to a height of 180 metres’ (20%).

25% of those surveyed supported ‘none’ of the options presented, or were unable to give a definitive response.

\*Percentages do not sum to 100 due to rounding.

†The 87 respondents who stated they ‘strongly oppose’ new hotel developments in Hobart have not been included in this chart.

## Support for Maximum Height of Hotel Developments Proposed for Hobart CBD – by Demographic Group

Table 4 – Support for Maximum Height of Hotel Developments Proposed for Hobart CBD  
(Percentage of respondents who did not “strongly oppose” new hotel developments in Hobart by demographic group)\*†

| Demographic Group            | Up to a height of 180 metres | Up to a height of 75 metres | Up to a height of 45 metres | None of the above | Unsure/ don't know |
|------------------------------|------------------------------|-----------------------------|-----------------------------|-------------------|--------------------|
| <i>Total</i>                 | 20                           | 26                          | 29                          | 16                | 9                  |
| <i>Gender</i>                |                              |                             |                             |                   |                    |
| Male                         | 28                           | 24                          | 29                          | 13                | 5                  |
| Female                       | 13                           | 28                          | 28                          | 19                | 12                 |
| <i>Age</i>                   |                              |                             |                             |                   |                    |
| 18 to 34 years               | 35                           | 28                          | 18                          | 9                 | 10                 |
| 35 to 44 years               | 16                           | 29                          | 40                          | 9                 | 6                  |
| 45 to 54 years               | 21                           | 29                          | 27                          | 14                | 9                  |
| 55 to 64 years               | 13                           | 22                          | 39                          | 19                | 8                  |

| <i>Local Government Area</i> |                              |                             |                             |                   |                    |
| Hobart LGA                   | 17                           | 26                          | 30                          | 17                | 9                  |
| Surrounding LGAs             | 27                           | 26                          | 25                          | 14                | 9                  |

× Those aged 65 years and over were significantly less likely to support buildings ‘up to a height of 180 metres’ (8%) and far more inclined to opt for ‘none of the above’ (32%).

✓ Those aged 18 to 34 years were significantly more likely to state they would support buildings ‘up to a height of 180 metres’ (35%).

\*Percentages do not sum to 100 due to rounding.

†The 87 respondents who stated they ‘strongly oppose’ new hotel developments in Hobart have not been included in this chart.

## Combined Level of Agreement with Statements About New Hotel Developments Proposed in Hobart

*Q. I am now going to read out a series of statements that other people have made in support and opposition to proposed new hotel developments in Hobart. For each, could you please tell me whether you agree or disagree with the statement. The hotel developments will...*

**Chart 3 – Combined Level of Agreement with Statements About New Hotel Developments Proposed in Hobart**  
(Percentage of respondents)

Agreement was high in relation to the 3 positive statements about new hotel developments in Hobart, with the highest level for the statement that they will 'provide employment and new jobs for Tasmanians' (90%).

When it came to the negative statements, those surveyed were most likely to agree that new hotel developments will 'create more traffic and congestion in the city' (76%).

\*Percentages do not sum to 100 due to rounding.

†Respondents who were 'unsure' have not been included in this chart.

## Level of Agreement with Statements About New Hotel Developments Proposed in Hobart

Table 5 – Level of Agreement with Statements About New Hotel Developments Proposed in Hobart  
(Percentage of respondents)\*

| Statements  | TOTAL AGREE | Strongly agree | Somewhat agree | TOTAL DISAGREE | Somewhat disagree | Strongly disagree | Unsure/ no opinion |
|---|-------------|----------------|----------------|----------------|-------------------|-------------------|--------------------|
| Provide employment and new jobs for Tasmanians                    | 90          | 52             | 38             | 9              | 6                 | 3                 | 1                  |
| Help meet the need for additional visitor accommodation in Hobart | 87          | 45             | 42             | 9              | 5                 | 4                 | 4                  |
| Increase economic activity for the State as a whole               | 84          | 41             | 42             | 14             | 9                 | 4                 | 3                  |
| Create more traffic and congestion in the city                    | 76          | 39             | 36             | 21             | 14                | 7                 | 3                  |
| Lead to too many high-rise developments in the city               | 56          | 31             | 25             | 34             | 22                | 13                | 9                  |
| Have a negative impact on the visual appeal of Hobart             | 55          | 32             | 22             | 37             | 26                | 11                | 8                  |

Females were more likely to agree that new hotel developments will:

- 'Lead to too many high-rise developments in the city' (67%, compared to 44% of males)

Those in surrounding LGAs were more likely to agree that new hotel developments will:

- 'Increase economic activity for the State as a whole' (91%, compared to 80% of those in the Hobart LGA)

And less likely to agree that new hotel developments will:

- 'Have a negative impact on the visual appeal of Hobart' (49%, compared to 31% of those in the Hobart LGA)

\*Percentages may not sum to 100 due to rounding.

## Level of Considered Support for New Hotel Developments in Hobart

*Q. Sometimes people change their minds on a subject after hearing some arguments for and against it, so would you now say you strongly support, somewhat support, somewhat oppose or strongly oppose new hotel developments in Hobart?*

\*Percentages do not sum to 100 due to rounding.

After hearing arguments for and against the new hotel developments in Hobart, close to two-thirds of respondents in total were still in support (65%), with 27% opposed and the remaining 8% unable to give a definitive response.

These are very similar to the levels of support recorded initially (68% support, 24% oppose), which indicates that respondents had already made up their minds in regards to new hotel developments and their support was not influenced by consideration of building height limits and statements for and against new hotel developments.

## Level of Considered Support for New Hotel Developments in Hobart – by Demographic Group

Table 6 – Level of Considered Support for New Hotel Developments in Hobart  
(Percentage of respondents by demographic group)\*

| Demographic Group            | TOTAL CONSIDERED SUPPORT | Strongly support | Somewhat support | TOTAL CONSIDERED OPPOSE | Somewhat oppose | Strongly oppose | Unsure/ no opinion |
|------------------------------|--------------------------|------------------|------------------|-------------------------|-----------------|-----------------|--------------------|
| <i>Total</i>                 | 65                       | 19               | 47               | 27                      | 13              | 14              | 8                  |

| Male                         | 73                       | 24               | 50               | 20                      | 10              | 10              | 6                  |
| Female                       | 58                       | 14               | 44               | 33                      | 15              | 17              | 9                  |
| <i>Age</i>                   |                          |                  |                  |                         |                 |                 |                    |
| 18 to 34 years               | 83                       | 14               | 69               | 12                      | 9               | 4               | 5                  |
| 35 to 44 years               | 62                       | 18               | 44               | 30                      | 18              | 12              | 9                  |
| 45 to 54 years               | 69                       | 30               | 39               | 26                      | 12              | 14              | 6                  |
| 55 to 64 years               | 59                       | 24               | 35               | 30                      | 15              | 15              | 10                 |
| 65 years or over             | 45                       | 14               | 31               | 43                      | 14              | 29              | 12                 |
| <i>Local Government Area</i> |                          |                  |                  |                         |                 |                 |                    |
| Hobart LGA                   | 62                       | 13               | 49               | 29                      | 13              | 16              | 9                  |
| Surrounding LGAs             | 72                       | 29               | 43               | 22                      | 12              | 10              | 6                  |

✓ Again, those aged 18 to 44 years were significantly more likely to 'support' the new hotel developments (76%).

✗ Similarly, those aged 65 years and over were significantly less likely to support new hotel developments (a total of 45%) and more likely to oppose them (43%).

✗ Those in the Hobart LGA were now significantly less likely to be in strong support of new hotel developments in Hobart (13%, compared to 29% of those in surrounding LGAs).

\*Percentages may not sum to 100 due to rounding.

**7.2.258 Goulburn Street - Change of Use to Residential (Communal  
Residence) - PLN-18-565  
File Ref: F19/470**

---

Memorandum of the Manager Development Appraisal of 8 January 2019  
and attachments.

Delegation: Council

City of **HOBART**

## MEMORANDUM: CITY PLANNING COMMITTEE

### **58 Goulburn Street - Change of Use to Residential (Communal Residence) - PLN-18-565**

Planning application PLN-18-565 proposing a change of use to residential (communal residence) at 58 Goulburn Street, Hobart was considered by the Council at its meeting on 17 December 2018. At that meeting the Council resolved as follows:

*That the item be deferred to allow time for further clarification as to how the management model of the complex will operate going forward.*

The purpose of this memorandum is to provide further clarification of the complex's proposed management model and to present the planning application for determination.

#### **Discussion**

The complex at 58 Barrack Street currently operates under two planning permits (PLN-09-01116 and PLN-12-00021) as a 'welfare institution' (as defined under the *City of Hobart Planning Scheme 1982*). Both permits require, amongst other things, at least one staff member acting in a supervisory capacity to be onsite at all times (ie. 24 hours a day/seven days a week).

The site managers no longer want the operation of the use to be subject to that requirement. They have therefore applied (under planning application PLN-18-565) for a change of use to residential (communal residence), with the management strategy lodged as part of the application not including any requirement for there to be at least one supervisory staff member on the site at all times. Instead, the strategy indicates as follows:

- Anglicare will provide three (3) full-time equivalent (FTE) workers at the complex – one (1) senior and two (2) support workers (8am to 8pm, Monday to Friday);
- Additional funding has been provided for one (1) staff member working six (6) hours on Saturday (4pm to 10pm) and six (6) hours on Sunday (9am to 2pm). This is for a three (3) month period and has been implemented to address concerns raised by tenants. It is not expected to continue.

- Anglicare also have two (2) security patrols on weeknights (around 9pm and 11pm), one (1) on Saturday (around midnight) and two (2) on Sunday (6 pm and 10pm);
- There is also the option available to tenants to call security should the need arise outside of the patrol hours. To date, the only calls to security have been when tenants have locked their keys in their units;
- The regular security patrols are expected to wind down, with the option that tenants will still be able to call security as needed (i.e. on-call). As with the other facilities Anglicare manages across the state, if there are concerns at any given times, Anglicare will arrange ad-hoc patrols. Security services will retain the ability of phoning Anglicare's on-call Area Managers if the need arises.

As noted in the planning application's officer report previously considered by the City Planning Committee and the Council (attached below), independent legal advice regarding the classification of the use of the property was sought prior to assessing the planning application. That advice reads:

*"The Council's planning officer has assessed the DA and has formed the view that:*

- (a) the use which is proposed should be classified as "residential";*
- (b) the proposal should be treated as "permitted", so that the Council is required to grant a permit; and*
- (c) there is nothing in the planning scheme which supports the imposition of a condition requiring a staff member to be on-site at all times, and there is no basis to refuse the DA on the basis that this is not proposed.*

*You have asked for advice on whether or not the planning officer's assessment is correct.*

*In our view:*

- (a) the planning officer has properly characterised the use as falling within the "residential" use class;*
- (b) based on our understanding that the DA complies with all applicable standards (such as parking), a permit must be granted by the Council; and*
- (c) the proposal for a staff-member to be on call may be imposed as a condition, and there is no ability for the Council to impose a more onerous management strategy."*

A second legal opinion resulting from an earlier deferral of the application by the City Planning Committee at its meeting of 10 December 2018 was also considered in the closed session of the City Planning Committee of 17 December 2018.

As indicated in the officer report assessing the planning application (Attachment A to this memorandum), the proposal complies with all acceptable solutions for all applicable standards within the *Hobart Interim Planning Scheme 2015*. The application is therefore permitted and does not require public advertising in accordance with section 58 of the *Land Use Planning and Approvals Act 1993*. That section of the Act also requires that Council must approve the application.

An extension of time has been granted by the applicant until 22 January 2019 to allow consideration by the Council at the meeting scheduled for 21 January 2019.

### **RECOMMENDATION**

That: Pursuant to the *Hobart Interim Planning Scheme 2015*, the Council approve the application for change of use to residential (communal residence) at 58 Goulburn Street, Hobart for the reasons outlined in the officer report of 5 December 2018 (Attachment A to this memorandum) and a permit containing the following conditions be issued:

#### **GEN**

**The use and/or development must be substantially in accordance with the documents and drawings that comprise PLN-18-565 - 58 GOULBURN STREET HOBART TAS 7000 except where modified below.**

Reason for condition

To clarify the scope of the permit.

#### **ADVICE**

The following advice is provided to you to assist in the implementation of the planning permit that has been issued subject to the conditions above. The advice is not exhaustive and you must inform yourself of any other legislation, by-laws, regulations, codes or standards that will apply to your development under which you may need to obtain an approval. Visit the Council's [website](#) for further information.

Prior to any commencement of work on the site or commencement of use the following additional permits/approval may be required from the Hobart City Council.

**BUILDING PERMIT**

You may need building approval in accordance with the *Building Act 2016*. Click [here](#) for more information.

This is a Permitted Planning Permit issued in accordance with section 58 of the *Land Use Planning and Approvals Act 1993*.

*As signatory to this report, I certify that, pursuant to Section 55(1) of the Local Government Act 1993, I hold no interest, as referred to in Section 49 of the Local Government Act 1993, in matters contained in this report.*

---

**1. Executive Summary**

- 1.1 Planning approval is sought for Change of Use to Residential (Communal Residence) at 58 Goulburn Street, Hobart.

- 1.2 More specifically the proposal includes:
- Changing the use of the property from 'welfare institution' (the use group approved under the *City of Hobart Planning Scheme 1982*) to 'residential (communal residence)' (the use category that the use falls into under the *Hobart Interim Planning Scheme 2015*).
  - Changes to the management model of the site whereby there will no longer be a staff member on site at all times. Instead, at certain times when there is not a staff member on site, there will be someone on call who will attend the property if any issues arise.
  - The new management model for the site will include the following:
    - Anglicare will provide three (3) full-time equivalent (FTE) workers at Goulburn Street – one (1) senior and two (2) support workers (8am to 8pm Monday to Friday).
    - Additional funding has been provided to provide one (1) staff member working six (6) hours Saturday (4pm to 10pm) and six (6) hours Sunday (9am to 2pm). This is for a three (3) month period and has been implemented to address concerns raised by tenants. It is not expected to continue.
    - Anglicare also have two (2) security patrols on weeknights (around 9pm and 11pm), one (1) on Saturday (around midnight) and two (2) on Sunday (6 pm and 10pm).
    - There is also the option available to tenants to call security should the need arise outside of the patrol hours. To date, the only calls to security have been when tenants have locked their keys in their units.
    - The regular security patrols are expected to wind down, with the option that tenants will still be able to call security as needed (i.e. on-call). As with the other facilities Anglicare manage across the state, if there are concerns at any given times, Anglicare will arrange ad-hoc patrols. Security services will retain the ability of phoning Anglicare on-call Area Managers if the need arises.
- 1.3 The proposal complies with all acceptable solutions for all applicable standards.
- 1.4 The application is therefore permitted and was not publicly advertised in accordance with section 58 of the *Land Use Planning and Approvals Act 1993*.
- 1.5 The proposal must be approved in accordance with section 58 of the *Land Use Planning and Approvals Act 1993*.
- 1.6 The final decision is delegated to the Council due to the application being called in by an Alderman/Councillor.

## 2. Site Detail

- 2.1 The property has frontages to three streets: Goulburn, Liverpool and Barrack. The property is rated as 58 Goulburn Street. 275 Liverpool Street is the Council owned car park (subdivided from the rest of the site and on a separate title) and so has not been included in the address of the development.

*Fig. 1. Subject property.*

*Fig. 3. Subject property (corner Barrack and Liverpool Streets). The ground floor car park is 275 Liverpool Street and owned by the Hobart City Council. The first and second levels are part of 58 Goulburn Street and form part of the subject site. Source: GoogleMaps.*

### 3. Proposal

- 3.1 Planning approval is sought for Change of Use to Residential (Communal Residence) at 58 Goulburn Street, Hobart.
- 3.2 More specifically the proposal includes:
- Changing the use of the property from 'welfare institution' (the use group approved under the *City of Hobart Planning Scheme 1982*) to 'residential (communal residence)' (the use category that the use falls into under the *Hobart Interim Planning Scheme 2015*).
  - Changes to the management model of the site whereby there will no longer be a staff member on site at all times. Instead, at certain times when there is not a staff member on site, there will be someone on call who will attend the property if any issues arise.
  - The new management model for the site will include the following:
    - Anglicare will provide three (3) full-time equivalent (FTE) workers at Goulburn Street – one (1) senior and two (2) support workers (8am to 8pm Monday to Friday).
    - Additional funding has been provided to provide one (1) staff member working six (6) hours Saturday (4pm to 10pm) and six (6) hours Sunday (9am to 2pm). This is for a three (3) month period and has been implemented to address concerns raised by tenants. It is not expected to continue.
    - Anglicare also have two (2) security patrols on weeknights (around 9pm and 11pm), one (1) on Saturday (around midnight) and two (2) on Sunday (6 pm and 10pm).
    - There is also the option available to tenants to call security should the need arise outside of the patrol hours. To date, the only calls to security have been when tenants have locked their keys in their units.
    - The regular security patrols are expected to wind down, with the option that tenants will still be able to call security as needed (i.e. on-call). As with the other facilities Anglicare manage across the state, if there are concerns at any given times, Anglicare will arrange ad-hoc patrols. Security services will retain the ability of phoning Anglicare on-call Area Managers if the need arises.

#### 4. Background

- 4.1 The welfare institution use at the site was approved under two planning permits: PLN-09-01116 in 2009 and PLN-12-00021 in 2012. Both permits were granted under the *City of Hobart Planning Scheme 1982*.

- 4.2 The site was divided into two zones under the *City of Hobart Planning Scheme 1982*. The Goulburn Street end of the site was zoned Residential 1 and the Liverpool Street end was zoned Central Service.

The 2009 permit approved the 'welfare institution' use on the Goulburn Street portion of the site and flats on the Liverpool Street portion of the site (this is because 'welfare institution' was, under the *City of Hobart Planning Scheme 1982*, a prohibited use in the Central Service Zone, and so this use could not be approved on the Liverpool Street end of the site).

In 2012, a section 43A amendment was issued, which made 'welfare institution' a discretionary use on the Liverpool Street portion of the site, and so the flats which were approved in 2009 were able to be approved as 'welfare institution' under PLN-12-00021.

- 4.3 The 2009 permit includes condition 35 as follows:

*The operator of the welfare institution component of the development must maintain and implement a management strategy generally in accordance with the Goulburn Street Property & Tenancy Overview dated April 2010 (attachment B). The management strategy must include provision for at least one (1) staff member to be on-site at all times and be acting in a supervisory capacity. A current copy of the management strategy is to be provided to the Hobart City Council at the time of the first occupation of the welfare institution component of the development and at any time after that event upon the request of the Hobart City Council.*

*Reason for condition: To ensure the safe and effective management of the Welfare Institution*

- 4.4 This is very similar to condition 8 on the 2012 permit, which reads:

*The operator of the welfare institution must maintain and implement a management strategy. The management strategy must include provision for at least one (1) staff member to be on-site at all times and be acting in a supervisory capacity. A current copy of the management strategy is to be provided to the Hobart City Council at the time of the first occupation of the welfare institution and at any time after that event, upon the request of the Hobart City Council.*

*Reason for condition: To ensure the safe and effective management of the welfare institution.*

- 4.5 The site managers no longer want the operation of the use across the entirety of the site to be subject to a requirement for a staff member to be onsite 24 hours a day. The operators have therefore applied (under the current planning application) for a change of use to residential (communal residence). The Anglicare Management Strategy update which was lodged with the current application does not propose that at least one supervisory staff member will be on the site at all times. Instead, the strategy states that there will be staff members on the site 8am to 8pm Monday to Friday, one staff member on site for part of the day on Saturday and Sunday (this is a three month interim measure and is not expected to continue) and security patrols at specified times during the evening and night, seven days a week.
- 4.6 The application is considered to be for a change of use rather than a partial change of use because the ground floor of the Liverpool Street end of the site (275 Liverpool Street) is not part of the site. This property has been subdivided vertically from the rest of the site. It is owned by the Hobart City Council, is rated as 275 Liverpool Street, and is used as an 'unlisted use (car park)' which was approved under PLN-09-01112.

- 4.7 Prior to assessing the planning application (PLN-18-565), Council sought independent legal advice in relation to the classification of the use of the property. This preliminary advice reads:

*"The Council's planning officer has assessed the DA and has formed the view that:*

*(a) the use which is proposed should be classified as "residential";*

*(b) the proposal should be treated as "permitted", so that the Council is required to grant a permit; and*

*(c) there is nothing in the planning scheme which supports the imposition of a condition requiring a staff member to be on-site at all times, and there is no basis to refuse the DA on the basis that this is not proposed.*

*You have asked for advice on whether or not the planning officer's assessment is correct.*

*In our view:*

*(a) the planning officer has properly characterised the use as falling within the "residential" use class;*

*(b) based on our understanding that the DA complies with all applicable standards (such as parking), a permit must be granted by the Council; and*

*(c) the proposal for a staff-member to be on call may be imposed as a condition, and there is no ability for the Council to impose a more onerous management strategy."*

## **5. Concerns raised by representors**

- 5.1 As the proposal complies with all acceptable solutions for all applicable standards, the application is deemed to be 'permitted', and must be approved without public advertising in accordance with section 58 of the *Land Use Planning and Approvals Act 1993*.

## **6. Assessment**

- 6.1 The *Hobart Interim Planning Scheme 2015* is a performance based planning

scheme. To meet an applicable standard, a proposal must demonstrate compliance with either an acceptable solution or a performance criterion. Where a proposal complies with a standard by relying on one or more performance criteria, the Council may approve or refuse the proposal on that basis. The ability to approve or refuse the proposal relates only to the performance criteria relied on.

6.2 The site is located within the Inner Residential Zone and the Central Business Zone of the *Hobart Interim Planning Scheme 2015*.

6.3 The existing use is 'welfare institution' which was approved under the provisions of the *City of Hobart Planning Scheme 1982* under application numbers PLN-09-01116 and PLN-12-00021.

6.4 The use class 'welfare institution' does not exist under the current planning scheme (the *Hobart Interim Planning Scheme 2015*). This planning scheme has the use class 'residential' which includes all residential types, irrespective of whether they are supported or managed accommodation or not. The 'residential' use class is defined as:

*Use of land for self contained or shared living accommodation. Examples include an ancillary dwelling, boarding house, communal residence, hostel, residential aged care home, residential college, respite centre, retirement village and single or multiple dwellings.*

6.5 There are no use standards for any of the uses within the 'residential' use class. Simply put, the scheme does not recognise any difference between people living in owner-occupied dwellings, rented dwellings or supported accommodation, and subsequently does not require that some dwelling types are treated or assessed differently to others. As a result, there is no discretion under the *Hobart Interim Planning Scheme 2015* to require that some of the uses within this category (e.g. supported accommodation) have management strategies.

6.6 The units do not have laundries and so are not considered to be 'dwellings'. They therefore have not been classified as 'multiple dwellings' (which is more than one dwelling on a lot). The occupiers of the units have their own private space (bathroom, bedroom, lounge and kitchenette), and parts of the facility are also shared amongst all residents (e.g. recreation rooms and laundry). The development is therefore considered to be a 'communal residence' which is one of the sub-groups in the 'residential' use category.

A communal residence is defined as:

*Means use of land for a building to accommodated persons who are unrelated to*

*one another and who share some parts of the building. Examples include a boarding house, residential college and residential care home.*

- 6.7 'Residential' (including a 'communal residence') is a permitted use in the Inner Residential Zone and permitted use above ground floor level in the Central Business Zone. The ground floor of the site within the Central Business Zone is a Council owned car park, and the residential use is on the first and second floor levels.

The change of use is therefore permitted within both zones and must be approved by Council.

- 6.8 There is no discretion in relation to the provision of on-site parking spaces. The site has 12 spaces, which is the required number under clause E.6.6.1 A1 of the Parking and Access Code.

- 6.9 The proposal has been assessed against:

6.4.1 Part D - 11.0 Inner Residential Zone Standards

6.4.2 Part D - 22.0 Central Business Zone Standards

6.4.3 Part E - 6.0 Parking and Access Code

- 6.9 The proposal complies with all acceptable solutions for all applicable standards.

## **7. Discussion**

- 7.1 Planning approval is sought for Change of Use to Residential (Communal Residence).
- 7.2 The application was not advertised, in accordance with section 58 of the *Land Use Planning and Approvals Act 1993*.
- 7.3 The proposal has been assessed against the provisions of the *Hobart Interim Planning Scheme 2015* and does not rely on any performance criteria to satisfy the scheme's relevant standards and codes. As such, the proposal must be approved by Council in accordance with the provisions of section 58 of the *Land Use Planning and Approvals Act 1993*.

7.4 The proposal has not been assessed by other Council officers.

7.5 The proposal must be approved.

**8. Conclusion**

8.1 The proposed Change of Use to Residential (Communal Residence) at 58 Goulburn Street satisfies the relevant provisions of the *Hobart Interim Planning Scheme 2015*, and as such is recommended for approval.

**9. Recommendations**

That: Pursuant to the *Hobart Interim Planning Scheme 2015*, the Council approve the application for Change of Use to Residential (Communal Residence) at 58 Goulburn Street HOBART for the reasons outlined in the officer's report and a permit containing the following conditions be issued:

**GEN**

**The use and/or development must be substantially in accordance with the documents and drawings that comprise PLN-18-565 - 58 GOULBURN STREET HOBART TAS 7000 except where modified below.**

Reason for condition

To clarify the scope of the permit.

**ADVICE**

The following advice is provided to you to assist in the implementation of the planning permit that has been issued subject to the conditions above. The advice is not exhaustive and you must inform yourself of any other legislation, by-laws, regulations, codes or standards that will apply to your development under which you may need to obtain an approval. Visit the Council's [website](#) for further information.

Prior to any commencement of work on the site or commencement of use the following additional permits/approval may be required from the Hobart City Council.

**BUILDING PERMIT**

You may need building approval in accordance with the *Building Act 2016*. Click [here](#) for more information.

This is a Permitted Planning Permit issued in accordance with section 58 of the *Land Use Planning and Approvals Act 1993*.

(Liz Wilson)

**Development Appraisal Planner**

*As signatory to this report, I certify that, pursuant to Section 55(1) of the Local Government Act 1993, I hold no interest, as referred to in Section 49 of the Local Government Act 1993, in matters contained in this report.*

(Rohan Probert)

**Manager Development Appraisal**

*As signatory to this report, I certify that, pursuant to Section 55(1) of the Local Government Act 1993, I hold no interest, as referred to in Section 49 of the Local Government Act 1993, in matters contained in this report.*

Date of Report: 5 December 2018

**SITE PLAN**

The site plan shows a rectangular area bounded by Goulburn Street to the north, Barrack Street to the east, and Liverpool Street to the south. The plan includes several lots with dimensions and building footprints. Key features include:

- GOULBURN STREET at the top.
- BARRACK STREET on the right side.
- LIVERPOOL STREET at the bottom.
- Various lots with dimensions: (P126179), (D101540), (15/3HOB), (D102864), (SP160824), (7/5HOB), (D104072), (3/31)LO, (D104072), (P113297), (P133023), (6/24HOB), (D68287), (D40323), (P157559), (0.02), (1.44), (0.52), (0.08), (0.04), (0.22), (0.42), (1.57), (1.55), (0.20), (0.20), (0.20), (1.65), (0.19), (0.18).
- Buildings on the site: BUILDING ON BDY. (15/3HOB), BUILDING ON BDY. (D102864), BUILDING ON BDY. (SP160824), BUILDING ON BDY. (7/5HOB).

NOTES: (i) ALL BUILDINGS ON THE SITE TO BE SHOWN ON SHEET 1.  
(ii) BUILDING TO SITE BOUNDARY OFFSETS OF LESS THAN 2.00 METRES TO BE SHOWN ON SHEET 1.

**TABLE OF LOT 1 LEVEL 1 AREAS**

|               |                    |
|---------------|--------------------|
| OPEN SPACE    | 257m <sup>2</sup>  |
| BUILDING AREA | 88.5m <sup>2</sup> |

**LEVEL 1**  
SCALE 1:400

THE LOT 1 VERTICAL BOUNDARIES EXTEND FROM 10 METRES BELOW GROUND LEVEL TO 20 METRES ABOVE GROUND LEVEL EXCEPT FOR THE STIPPLED AREA OF LOT 1 WHICH EXTEND FROM 10 METRES BELOW GROUND LEVEL TO THE CENTRE OF THE FLOOR DIRECTLY ABOVE OR PROLONGATION THEREOF.

THE HORIZONTAL LOT BOUNDARIES (SHOWN BY HEAVY UNBROKEN LINES) AND THE STIPPLED AREA ARE DEFINED BY:

- SITE BOUNDARY
- OPEN BOUNDARY 'AB' PARALLEL AND OFFSET 2.25 METRES TO SITE BOUNDARY LABELLED 'SS'
- OPEN BOUNDARY 'BB' PARALLEL AND OFFSET 0.10 METRES TO FACE OF WALL LABELLED 'WALL'
- COURTYARD FACE OF WALL ON LEVEL 3 LABELLED 'CC'
- OUTSIDE FACE OF WALL ON LEVEL 3 LABELLED 'CD'
- CENTRE OF WALL LABELLED 'DD'
- EDGE OF BALCONY ON LEVEL 2 LABELLED 'AA' & EXTENSION THEREOF LABELLED 'AD'
- EDGE OF STAIRS LABELLED 'AE', 'EF' & EXTENSION THEREOF LABELLED 'AF'

THE LOWER LOT 2 VERTICAL BOUNDARY IS DEFINED BY:

- 'abc' (EXCLUDING THE HATCHED & CROSS HATCHED PORTIONS) WHICH IS A SLOPING PLANE DEFINED BY A HEIGHT OF 24.78 AHD83 AT POINT ③ AND A HEIGHT OF 25.50 ALONG THE LINE 'bc'
- 'befdc' (EXCLUDING THE HATCHED PORTION) WHICH IS A SLOPING PLANE DEFINED BY A HEIGHT OF 25.60 AHD83 AT POINT ① AND A HEIGHT OF 25.50 AHD83 ALONG THE LINE 'bc'
- THE HATCHED AREA WHICH IS 25.80 AHD83
- THE CROSS HATCHED AREA WHICH IS 25.60 AHD83

(SEE SURVEY NOTES WITH SP163005 FOR HATCHED AND CROSS HATCHED AREA HORIZONTAL FIXATION)

THE UPPER LOT 2 VERTICAL BOUNDARY EXTENDS TO THE CENTRELINE OF THE FLOOR ABOVE OR PROLONGATION THEREOF.

AREAS ARE APPROXIMATE ONLY.

### *Planning and Development Consultants*

General Manager  
Hobart City Council  
16 Elizabeth Street  
HOBART TAS 7000

5 December 2018

Dear Sir,

**RE: PLN-18-565 - 58 GOULBURN STREET AND 275 LIVERPOOL STREET – SUPPORTED RESIDENTIAL FACILITY  
– CHANGE OF USE TO RESIDENTIAL**

I refer to your letter of 13 September 2018 requesting further information.

Accordingly, I seek to revise the application to being one for 'change of use to residential'.

## BACKGROUND

In 2009 the Resource Management and Planning Appeal Tribunal approved a 'welfare' institution' use on the Goulburn Street portion of the site, and 'flats' on the Liverpool Street portion (Permit PLN-09-01116-01), under the *City of Hobart Planning Scheme 1982*.

**Figure 1:** location (base source: TheLIST 06/08/18)

The Tribunal imposed the following condition 35 on the permit:

*The operator of the welfare institution component of the development must maintain and implement a management strategy generally in accordance with the Goulburn Street Property & Tenancy Overview dated April 2010 (attachment B). The management strategy must include provision for at least one (1) staff member to be on-site at all times and be acting in a supervisory capacity. A current copy of the management strategy is to be provided to the Hobart City Council at the time of the first occupation of the welfare institution component of the development and at any time after that event upon the request of the Hobart City Council.*

**Reason for condition**

**To ensure the safe and effective management of the Welfare Institution**

In 2012 the Tasmanian Planning Commission approved an amendment to the *City of Hobart Planning Scheme 1982* making 'welfare institution' a discretionary use on the Liverpool Street portion of the site, allowing the existing flats to be approved as 'welfare institution'.

The subsequent permit (PLN-12-00021-01) included the following condition 8:

*The operator of the welfare institution must maintain and implement a management strategy. The management strategy must include provision for at least one (1) staff member to be on-site at all times and be acting in a supervisory capacity. A current copy of the management strategy is to be provided to the Hobart City Council at the time of the first occupation of the welfare institution and at any time after that event, upon the request of the Hobart City Council.*

**Reason for condition**

**To ensure the safe and effective management of the welfare institution.**

**PROPOSAL**

Changes to the management model mean that 24-hour on-site management will no longer be provided. Instead there will be someone on call who will attend the property if any issues arise.

Council has advised that the proposal cannot be assessed as an 'alteration to existing use' as the originally approved use (Welfare Institution) no longer exists under the current planning scheme (see below). Accordingly, it is necessary to apply for a new permit for a change of use.

**STATUTORY PLANNING CONSIDERATIONS**

**Use**

The relevant planning scheme is now the *Hobart Interim Planning Scheme 2015* ('the interim planning scheme').

'Welfare institution' is no longer a separate use class under the interim planning scheme, but rather is classified as 'residential'.

'Residential', is a permitted use in the Inner Residential zoned portion of the site, and permitted if above ground floor level in the Central Business zoned portion of the site.

The required change of use to residential is therefore permitted in both zones.

**Development**

No development is proposed.

**Car parking**

Twelve (12) parking spaces are currently provided on-site (including 1 disability space).

Pursuant to clause E6.6.5, parking is not required within the Central Business Zone.

The 25 residential units within the Inner Residential Zone do not have their own private laundry facilities, and so pursuant to clause 4.1.3 are not considered to be separate dwellings under the planning scheme. The closest 'match' for such use under Table E.6.1 in the Parking and Access Code is 'boarding house or hostel or residential college' which has a parking requirement of one (1) space for each staff member and one (1) for every three (3) licensed residents.

Three (3) FTE and one (1) PTE staff members operate on site requiring a total of four (4) car spaces, whilst the residential requirement in the Inner Residential Zone would be 25 units divided by 3 = 8.3 spaces (8). The 12 spaces provided are therefore sufficient to comply with the relevant Acceptable Solution.

***On-site management***

A revised management plan reflecting the new operational changes is attached.

If you require any further information or clarification, please do not hesitate to contact me in the first instance.

Yours faithfully,

NEIL SHEPHARD BA, MTCP(Syd), FPIA, CPP

- Management Strategy Update 8 August 2018
- Floor plans with car parking

**58 GOULBURN STREET AND 275 LIVERPOOL STREET –  
SUPPORTED RESIDENTIAL FACILITY****Anglicare Management Strategy updates****8 August 2018**

---

- Anglicare provide 3 full-time equivalent (FTE) workers at Goulburn Street – 1 senior and 2 support workers (8am to 8pm Mon to Friday).
- Additional funding has been provided to provide 1 staff member working 6 hours Saturday (4pm to 10pm) and 6 hours Sunday (9am to 2pm). This is for a 3 month period and has been implemented to address concerns raised by tenants. It is not expected to continue.
- Anglicare also have 2 security patrols on weeknights (around 9pm and 11pm) 1 on Saturday (around midnight) and 2 on Sunday (6 pm and 10pm).
- There is also the option available to tenants to call security should the need arise outside of the patrol hours. To date the only calls to security have been when tenants have locked their keys in their units.
- The regular security patrols are expected to wind down with the option that tenants will still be able to call security as needed (ie on-call). As with the other facilities Anglicare manage across the state, if there are concerns at any given times Anglicare will arrange ad-hoc patrols. Security services will retain the ability of phoning Anglicare on-call Area Managers if the need arises.

**7.2.3 1 - 5 RYDE STREET, NORTH HOBART - PARTIAL DEMOLITION  
AND ALTERATIONS FOR KIOSK, AND NEW BUILDING FOR  
COACHES AND MEDIA BOXES  
PLN-18-738 - FILE REF: F19/770**

---

Address: 1-5 Ryde Street, North Hobart

Proposal: Partial Demolition and Alterations for Kiosk, and  
New Building for Coaches and Media Boxes

Expiry Date: 20 February 2019

Extension of Time: Not applicable

Author: Liz Wilson

**RECOMMENDATION**

That: Pursuant to the *Hobart Interim Planning Scheme 2015*, the Council approve the application for partial demolition and alterations for kiosk, and new building for coaches and media boxes at 1-5 Ryde Street NORTH HOBART for the reasons outlined in the officer's report and a permit containing the following conditions be issued:

**GEN**

**The use and/or development must be substantially in accordance with the documents and drawings that comprise PLN-18-738 - 1-5 RYDE STREET NORTH HOBART TAS 7000 - Final Planning Documents except where modified below.**

Reason for condition

To clarify the scope of the permit.

**TW**

**The use and/or development must comply with the requirements of TasWater as detailed in the form Submission to Planning Authority Notice, Reference No. TWDA 2018/01801-HCC dated 19 November 2018 as attached to the permit.**

Reason for condition

To clarify the scope of the permit.

**PLN s2**

**The walls of the north elevation of the coaches/media box must be coloured using colours with a light reflectance value not greater than 40 percent prior to the first occupation of the coaches/media box.**

**Revised plans or details satisfying this requirement must be submitted and approved, prior to the issue of any approval under the *Building Act 2016*.**

**All work required by this condition must be undertaken in accordance with the approved revised plans.**

*Advice:*

*Once the revised plans have been approved, the Council will issue a condition endorsement (see general advice on how to obtain condition endorsement).*

*Where building approval is also required, it is recommended that documentation for condition endorsement be submitted well before submitting documentation for building approval. Failure to address condition endorsement requirements prior to submitting for building approval may result in unexpected delays.*

Reason for condition

To ensure that building design contributes positively to adjoining land in a residential zone

**ENG sw2.1**

**The Council's stormwater infrastructure adjacent to / within the subject site must be protected from damage during the construction of the development.**

**Digital copies of a pre and post construction work CCTV video and associated report(s) of any Council stormwater main within two metres of the works must be submitted to Council:**

- 1. Prior to issue of any consent under the *Building Act 2016* / the commencement of work, and**
- 2. After completion of all work but prior to the issue of any Certificate of Completion.**

**The pre and post construction work CCTVs will be relied upon to establish the extent of damage caused to the Council's infrastructure during construction. In the event that the owner fails to provide to the Council a pre-construction works CCTV video of the Council's infrastructure, then any damage to the Council infrastructure identified in the post construction CCTV will be deemed to be the responsibility of the owner.**

*Advice: Due to the diameter of the main, a tractor camera will be required to obtain adequately clear footage.*

Reason for condition

To ensure that any of the Council infrastructure and/or site-related service connections affected by the proposal will be altered and/or reinstated at the owner's full cost.

### **ENG sw3**

**The proposed works (including foundations and overhangs) must be designed to ensure the long term protection of and access to the Council's stormwater infrastructure.**

**A detailed design certified by a suitably qualified engineer must be submitted and approved prior to issue of any consent under *Building Act 2016*. The detailed design must:**

- 1. Demonstrate how the design will ensure the protection of and provide access to the Council's stormwater main.**
- 2. Include certification by a suitably qualified engineer (that the works do not impose any loads on the storm water main and the structure is entirely independent of the main and its trenching).**

3. **Demonstrate how adequate access to the main is maintained.**
4. **Demonstrate that no additional loads are imposed on the stormwater main.**
5. **Demonstrate that the structure is entirely independent of the main and its trenching.**
6. **Include (but not be limited to) details of cross-sections, minimum separation, adequate cover.**

**Prior to issue of any Certificate of Completion a suitably qualified engineer must confirm the installation of the works within two metres of Council's stormwater main is in accordance with the approved drawings and complies with this condition. Should any remediation works be required, these must be carried out at the developer's cost.**

**All work required by this condition must be undertaken in accordance with the approved design.**

*Advice: Once the detailed design drawings has been approved the Council will issue a condition endorsement (see general advice on how to obtain condition endorsement)*

*As the proposal does not demonstrate the developers intention around the public stormwater infrastructure this condition is required if works are to occur over or within 2 metres of the public stormwater infrastructure. Relaxation of this condition can only be granted by the environmental engineering unit.*

Reason for condition

To ensure the protection of the Council's hydraulic infrastructure.

**ENG sw4**

**The development must be drained to Council infrastructure. Any new stormwater connection required must be constructed, and existing redundant connections must be sealed at the owner's expense prior to issue of a Certificate of Completion or first occupation whichever comes first.**

**Detailed design drawings showing both existing and proposed services must be submitted and approved, prior to issue of any consent under the Building Act 2016 / commencement of work. The detailed design drawings must include:**

- 1. The location of the proposed connections and all existing connections;**
- 2. The size and design of the connection(s) such that they are appropriate to safely service the development given the limited receiving capacity of Council infrastructure;**
- 3. Long-sections of the proposed connection(s) clearly showing any nearby services, cover, size, material and delineation of public and private infrastructure;**
- 4. Clearly distinguish between public and private infrastructure; and**
- 5. Be checked and certified by a qualified and experienced engineer.**

**All work required by this condition must be undertaken in accordance with the approved detailed design drawings.**

*Advice: Once the detailed design drawings have been approved the Council will issue a condition endorsement (see general advice on how to obtain condition endorsement)*

*Please note that once the condition endorsement has been issued you will need to contact Council's City Infrastructure Division to initiate an application for service connection.*

*Any proposed public stormwater infrastructure will require detailed engineering drawings, which must be checked and certified by a qualified and experienced civil engineer. The construction of public infrastructure will require a Permit to Construct Public Infrastructure.*

Reason for condition

To ensure the site is drained adequately.

**ENG sw5**

**The new stormwater infrastructure must be constructed and any existing infrastructure made redundant prior to issue of a completion certificate or first occupation, whichever occurs first.**

**Engineering design drawings must be submitted and approved, prior to commencement of work. The engineering drawings must:**

- 1. Be certified by a qualified and experienced engineer.**
- 2. Show in both plan and long-section the proposed stormwater mains, including but not limited to, connections, flows, velocities, hydraulic grade lines, clearances, cover, gradients, sizing, material, pipe class, adequate working platforms around manholes, easements and inspection openings.**
- 3. Include the associated calculations and catchment area plans. The stormwater system (including defined overland flow paths) must cater for all 1% AEP flows as at 2100 (i.e including climate change loading) from a fully developed catchment. The main itself must be sized to accommodate at least the 5% AEP flows from a fully-developed catchment.**
- 4. Clearly distinguish between public and private infrastructure.**
- 5. Be substantially in accordance with the LGAT drawings.**

**All work required by this condition must be undertaken in accordance with the approved engineered drawings.**

*Advice: Once the engineered drawings has been approved the Council will issue a condition endorsement (see general advice on how to obtain condition endorsement).*

*Please note that once the condition endorsement has been issued you will need to contact Council's City Infrastructure Division to obtain a Permit to Construct Public Infrastructure.*

Reason for condition

To ensure Council's hydraulic infrastructure meets acceptable standards.

#### **ENG 1**

**The cost of repair of any damage to the Council's infrastructure resulting from the implementation of this permit, must be met by the owners within 30 days of the completion of the development or as otherwise determined by the Council.**

**A photographic record of the Council's infrastructure adjacent to the subject site must be provided to the Council prior to any commencement of works.**

**A photographic record of the Council's infrastructure (e.g. existing property service connection points, roads, buildings, stormwater, footpaths, driveway crossovers and nature strips, including if any, pre-existing damage) will be relied upon to establish the extent of damage caused to the Council's infrastructure during construction. In the event that the owner/developer fails to provide to the Council a photographic record of the Council's infrastructure, then any damage to the Council's infrastructure found on completion of works will be deemed to be the responsibility of the owner.**

Reason for condition

To ensure that any of the Council's infrastructure and/or site-related service connections affected by the proposal will be altered and/or reinstated at the owner's full cost.

#### **ENG s1**

**Site survey drawings must be submitted and approved, prior to any consent granted under the *Building Act 2016*. The Survey drawings must:**

- 1. Be certified by a qualified and experienced surveyor.**

2. **Show a site plan of stormwater mains, including but not limited to, location of main and connections, surface levels, invert levels, material, pipe size, manholes, easements and inspection openings.**
3. **Clearly distinguish between public and private infrastructure.**
4. **Show all other infrastructure in the area both private and public, clearly distinguish between public and private.**

**All work required by this condition must be undertaken prior to the removal of existing infrastructure or approval of new infrastructure.**

*Advice: Once the Survey drawings has been accepted the Council will issue a condition endorsement (see general advice on how to obtain condition endorsement)*

Reason for condition

To ensure the protection of the Council's hydraulic infrastructure, and ensure the continued operation and service of the current stormwater infrastructure.

## **ENG s2**

**The cost of any alterations to the Council's or third-party infrastructure, including the site's service connection points, incurred as a result of the proposed development works must be met by the owner / developer.**

Reason for condition

To ensure that any of the Council infrastructure and/or site-related service connections affected by the proposal will be altered and/or reinstated at the owner's full cost.

**ENV 1**

**Sediment and erosion control measures sufficient to prevent sediment from leaving the site must be installed prior to any disturbance of the site, and maintained until all areas of disturbance have been stabilized or re-vegetated.**

*Advice: For further guidance in preparing a Soil and Water Management Plan – in accordance with Fact sheet 3 Derwent Estuary Program click [here](#).*

Reason for condition

To avoid the sedimentation of roads, drains, natural watercourses, Council land that could be caused by erosion and runoff from the development, and to comply with relevant State legislation.

**ENVHE 1**

**Recommendations in the reports *Preliminary Environmental Site Assessment (PSEA) Report* prepared by EM&C and dated 26 August 2018 and *Construction and Environmental Management Plan* prepared by EM&C and dated 27 November 2018 must be implemented.**

Reason for condition

To ensure that the risk to future occupants of the building remain low and acceptable.

**ADVICE**

The following advice is provided to you to assist in the implementation of the planning permit that has been issued subject to the conditions above. The advice is not exhaustive and you must inform yourself of any other legislation, by-laws, regulations, codes or standards that will apply to your development under which you may need to obtain an approval. Visit the Council's [website](#) for further information.

Prior to any commencement of work on the site or commencement of use the following additional permits/approval may be required from the Hobart City Council.

### **CONDITION ENDORSEMENT ENGINEERING**

All engineering drawings required to be submitted and approved by this planning permit must be submitted to the City of Hobart as a CEP (Condition Endorsement) via the City's [Online Service Development Portal](#). When lodging a CEP, please reference the PLN number of the associated Planning Application. Each CEP must also include an estimation of the cost of works shown on the submitted engineering drawings. Once that estimation has been confirmed by the City's Engineer, the following fees are payable for each CEP submitted and must be paid prior to the City of Hobart commencing assessment of the engineering drawings in each CEP:

#### **Value of Building Works Approved by Planning Permit Fee:**

- Up to \$20,000: \$150 per application.
- Over \$20,000: 2% of the value of the works as assessed by the City's Engineer per assessment.

These fees are additional to building and plumbing fees charged under the Building and Plumbing Regulations.

Once the CEP is lodged via the [Online Service Development Portal](#), if the value of building works approved by your planning permit is over \$20,000, please contact the City's Development Engineer on 6238 2715 to confirm the estimation of the cost of works shown on the submitted engineering drawings has been accepted.

Once confirmed, please call one of the City's Customer Service Officers on 6238 2190 to make payment, quoting the reference number (ie. CEP number) of the Condition Endorsement you have lodged. Once payment is made, your engineering drawings will be assessed.

## **BUILDING PERMIT**

You may need building approval in accordance with the *Building Act 2016*. Click [here](#) for more information.

This is a Discretionary Planning Permit issued in accordance with section 57 of the *Land Use Planning and Approvals Act 1993*.

## **PLUMBING PERMIT**

You may need plumbing approval in accordance with the *Building Act 2016*, *Building Regulations 2016* and the National Construction Code. Click [here](#) for more information.

## **SPECIAL CONNECTION PERMIT**

You may need a Special Connection Permit (Trade Waste) in accordance with the *Plumbing Regulations 2014* and the Tasmanian Plumbing Code. Click [here](#) for more information.

## **PUBLIC HEALTH**

You may be required to provide approved/endorsed plans for a food business fit out, in accordance with the National Construction Code - Building Code of Australia including Tas Part H102 for food premises which must have regard to the FSANZ Food Safety Standards. Click [here](#) for more information.

## **PERMIT TO CONSTRUCT PUBLIC INFRASTRUCTURE**

You may require a permit to construct public infrastructure, with a 12 month maintenance period and bond (please contact the Hobart City Council's City Infrastructure Division to initiate the permit process).

## **NEW SERVICE CONNECTION**

Please contact the Hobart City Council's City Infrastructure Division to initiate the application process for your [new stormwater connection](#).

## WASTE DISPOSAL

It is recommended that the developer liaise with the Council's Cleansing and Solid Waste Unit regarding reducing, reusing and recycling materials associated with demolition on the site to minimise solid waste being directed to landfill.

Further information regarding waste disposal can also be found on the Council's [website](#).

## FEES AND CHARGES

Click [here](#) for information on the Council's fees and charges.

## DIAL BEFORE YOU DIG

Click [here](#) for dial before you dig information.

---

**1. Executive Summary**

- 1.1 Planning approval is sought for Partial Demolition and Alterations for Kiosk, and New Building for Coaches and Media Boxes at North Hobart Oval.
- 1.2 More specifically the proposal includes:
  - Demolition of the existing kiosk and coaches/media box.
  - A new building comprising the kiosk, coolroom and wet bar with a roofed terraced area attached.
  - A new coaches and media box.
  - The new buildings are sited 1.5m from the northern boundary.
- 1.3 The proposal relies on performance criteria to satisfy the following standards and codes:
  - 1.3.1 Zone Development Standards - Building Height, Setback to Residential Zone, Design & Passive Surveillance.
  - 1.3.2 Potentially Contaminated Land Code
- 1.4 No representations were received during the statutory advertising period between 11 December and 28 December 2018.
- 1.5 The proposal is recommended for approval subject to conditions.

- 1.6 The final decision is delegated to the Council.

## 2. Site Detail

- 2.1 The subject site is the North Hobart Oval, specifically an area on the northern side of the site which contains the existing kiosk building, wet area and coaches box/camera box.

*Fig. 1. Subject property.*

*Fig. 2. The existing kiosk is to the left of the photograph and the existing media box is to the right. The new kiosk will be in the same location (but larger). The new coaches and media box will be to the east (right) of the kiosk in the same location as the existing box.*

### 3. Proposal

3.1 Planning approval is sought for Partial Demolition and Alterations for Kiosk, and New Building for Coaches and Media Boxes at North Hobart Oval.

3.2 More specifically the proposal includes:

- Demolition of the existing kiosk and coaches/media box.
- A new building comprising the kiosk, coolroom and wet bar with a roofed terraced area attached.
- A new coaches and media box.
- The new buildings are sited 1.5m from the northern boundary.

### 4. Background

4.1 N/A

**5. Concerns raised by representors**

- 5.1 No representations were received during the statutory advertising period between 11 December and 28 December 2018.

**6. Assessment**

- 6.1 The *Hobart Interim Planning Scheme 2015* is a performance based planning scheme. To meet an applicable standard, a proposal must demonstrate compliance with either an acceptable solution or a performance criterion. Where a proposal complies with a standard by relying on one or more performance criteria, the Council may approve or refuse the proposal on that basis. The ability to approve or refuse the proposal relates only to the performance criteria relied on.
- 6.2 The site is located within the Recreation Zone of the *Hobart Interim Planning Scheme 2015*.
- 6.3 The existing and proposed use is sports and recreation, which is a permitted use in the zone.
- 6.4 The proposal has been assessed against:
- 6.4.1 Part D - 18.0 Recreation Zone
  - 6.4.2 Part E - 2.0 Potentially Contaminated Land Code
  - 6.4.3 Part E - 7.0 Stormwater Management Code
- 6.5 The proposal relies on the following performance criteria to comply with the applicable standards:
- 6.5.1 Building Height – Part D 18.4.1 P2
  - 6.5.2 Setback to a Residential Zone - Part D 18.4.2 P2
  - 6.5.3 Light Reflectance Value - Part D 18.4.3 P2
  - 6.5.4 Passive Surveillance - Part D 18.4.4 P1
  - 6.5.5 Potentially Contaminated Land Code - Part E 2.6.2 P1

6.6 Each performance criterion is assessed below.

6.7 Building Height - Part D 18.4.1 P2

6.7.1 The acceptable solution at clause 18.4.1 A2 requires that the maximum building height within 10m of a residential zone is 8.5m.

6.7.2 The proposal includes a coaches and media box which is slightly higher at 8.565m, and sited 1.5m from the inner residential zone.

6.7.3 The proposal does not comply with the acceptable solution; therefore assessment against the performance criterion is relied on.

6.7.4 The performance criterion at clause 18.4.1 P2 provides as follows:

*Building height within 10 m of a residential zone must be compatible with the building height of existing buildings on adjoining lots in the residential zone.*

6.7.5 The only adjoining lot is 393 Argyle Street, which is Rydges. There are a number of buildings on this site. The closest Rydges building to the coaches/media box is a two storey heritage listed building. The new coaches/media box is a similar size to the existing box which will be demolished, and is compatible in height with the nearest multi-storey building on the Rydges site. The photograph below shows the existing coaches/media box in comparison to the Rydges building beyond.

6.7.6 The proposal complies with the performance criterion.

6.8 Setback to a Residential Zone - Part D 18.4.2 P2

6.8.1 The acceptable solution at clause 18.4.2 A2 requires that set back to a residential zone must be no less than 3.0m or half the height of the wall (whichever is greater).

6.8.2 The proposal includes a new kiosk and coaches/media box which are set back 1.5m from the northern boundary with the inner residential zone. To be permitted, the kiosk should be set back 3.0m and the coaches/media box should be set back 4.3m.

6.8.3 The proposal does not comply with the acceptable solution; therefore assessment against the performance criterion is relied on.

6.8.4 The performance criterion at clause 18.4.2 P2 provides as follows:

*Building setback from a residential zone must be sufficient to prevent unreasonable adverse impacts on residential amenity by:*

*(a) overshadowing and reduction of sunlight to habitable rooms and private open space on adjoining lots to less than 3 hours between 9.00 am and 5.00 pm on June 21 or further decrease sunlight hours if already less than 3 hours;*

- (b) overlooking and loss of privacy;*
- (c) visual impact when viewed from adjoining lots,*

*taking into account aspect and slope.*

- 6.8.5 The adjacent site is Rydges (393 Argyle Street) which is an accommodation and reception centre. The new kiosk and coaches/media box is separated from the nearest building at 393 Argyle Street by the property's car park. The Rydges buildings are to the north of the kiosk and coaches/media box and so would not be affected by overshadowing. There is no overlooking or loss of privacy, and minimal visual impact. The kiosk is single storey and the coaches/media box while higher, is a relatively small structure and a similar height to the existing coaches/media box.
- 6.8.6 The proposal complies with the performance criterion.
- 6.9 Light Reflectance Value - Part D 18.4.3 P2
  - 6.9.1 The acceptable solution at clause 18.4.3 A2 requires that walls facing a residential zone are coloured with colours which have a light reflectance value of not greater than 40%.
  - 6.9.2 The proposal includes a kiosk with a brick wall which meets the acceptable solution. The coaches/media box will be clad in vertical cladding, but the applicants have not decided on the colour of the cladding yet.
  - 6.9.3 The proposal does not comply with the acceptable solution; therefore assessment against the performance criterion is relied on.
  - 6.9.4 There is no performance criterion.
  - 6.9.5 As there is no performance criterion, the permit will be conditioned so that the acceptable solution is met.
- 6.10 Passive Surveillance - Part D 18.4.4 P1
  - 6.10.1 The acceptable solution at clause 18.4.4 A1 requires that a building complies with a number of design elements, including that (b) 40% of the surface area of the ground floor level facade is glazed and (c) that 30% of the surface area of the ground floor level facade is glazed where the facade faces a public space.

6.10.2 The proposal includes a new kiosk building whose facade is 17% glazed and a coaches/media box which does not have a ground floor level facade. The only glazing is on the second and third levels.

6.10.3 The proposal does not comply with the acceptable solution; therefore assessment against the performance criterion is relied on.

6.10.4 The performance criterion at clause 18.4.4 P1 provides as follows:

*Buildings design must provide for passive surveillance of public spaces by satisfying all of the following:*

*(a) provide the main entrance or entrances to a building so that they are clearly visible from nearby buildings and public spaces;*

*(b) locate windows to adequately overlook the street and adjoining public spaces;*

*(c) incorporate shop front windows and doors for ground floor shops and offices, so that pedestrians can see into the building and vice versa;*

*(d) locate external lighting to illuminate any entrapment spaces around the building site;*

*(e) provide external lighting to illuminate car parking areas and pathways;*

*(f) design and locate public access to provide high visibility for users and provide clear sight lines between the entrance and adjacent properties and public spaces;*

*(g) provide for sight lines to other buildings and public spaces.*

6.10.5 The proposal requires assessment against (b) and (c). The windows of the kiosk are adequate to overlook the public space between the playing oval and the kiosk and so meets (b). The open sided and covered wet area will provide excellent surveillance. The windows on the second and third levels allow surveillance from the coaches/media box and so meets (b). As neither building is a shop or office, there is no requirement to meet (c).

6.10.6 The proposal complies with the performance criterion.

## 6.11 Potentially Contaminated Land Code - Part E 2.6.2 P1

6.11.1 There is no acceptable solution for excavation of potentially contaminated land.

6.11.2 The proposal includes excavation of more than 1.5m<sup>2</sup> where the neighbouring property (393 Argyle Street) is listed as potentially contaminated.

6.11.3 There is no acceptable solution; therefore assessment against the performance criterion is relied on.

6.11.4 The performance criterion at clause E.2.6.2 P1 provides as follows:

*Excavation does not adversely impact on health and the environment, having regard to:*

*(a) an environmental site assessment that demonstrates there is no evidence the land is contaminated; or*

*(b) a plan to manage contamination and associated risk to human health and the environment that includes:*

*(i) an environmental site assessment;*

*(ii) any specific remediation and protection measures required to be implemented before excavation commences; and*

*(iii) a statement that the excavation does not adversely impact on human health or the environment.*

6.11.5 The Council's Environmental Health Officer has advised as follows:

An Environmental Site Assessment has been submitted that recommended that a CEMP was done. The CEMP was requested and submitted. All recommendations in both documents to be adhered to. Permit to be conditioned to this effect.

6.11.6 The proposal complies with the performance criterion.

## 7. Discussion

7.1 Planning approval is sought for Partial Demolition and Alterations for Kiosk, and New Building for Coaches and Media Boxes at North Hobart Oval.

- 7.2 The application was advertised and no representations were received.
- 7.3 The proposal has been assessed against the relevant provisions of the planning scheme and is considered to perform well.
- 7.4 The proposal has been assessed by other Council officers, including the Council's Development Engineer, Environmental Engineer and Environmental Health Officer. The officers have raised no objection to the proposal, subject to conditions.
- 7.5 The proposal is recommended for approval.

## **8. Conclusion**

- 8.1 The proposed Partial Demolition and Alterations for Kiosk, and New Building for Coaches and Media Boxes at 1-5 Ryde Street satisfies the relevant provisions of the *Hobart Interim Planning Scheme 2015*, and as such is recommended for approval.

**9. Recommendations**

That: Pursuant to the *Hobart Interim Planning Scheme 2015*, the Council approve the application for Partial Demolition and Alterations for Kiosk, and New Building for Coaches and Media Boxes at 1-5 Ryde Street NORTH HOBART for the reasons outlined in the officer's report and a permit containing the following conditions be issued:

**GEN**

**The use and/or development must be substantially in accordance with the documents and drawings that comprise PLN-18-738 - 1-5 RYDE STREET NORTH HOBART TAS 7000 - Final Planning Documents except where modified below.**

Reason for condition

To clarify the scope of the permit.

**TW**

**The use and/or development must comply with the requirements of TasWater as detailed in the form Submission to Planning Authority Notice, Reference No. TWDA 2018/01801-HCC dated 19 November 2018 as attached to the permit.**

Reason for condition

To clarify the scope of the permit.

**PLN s2**

**The walls of the north elevation of the coaches/media box must be coloured using colours with a light reflectance value not greater than 40 percent prior to the first occupation of the coaches/media box.**

**Revised plans or details satisfying this requirement must be submitted and approved, prior to the issue of any approval under the Building Act 2016.**

**All work required by this condition must be undertaken in accordance with the approved revised plans.**

*Advice:*

*Once the revised plans have been approved, the Council will issue a condition endorsement (see general advice on how to obtain condition endorsement).*

*Where building approval is also required, it is recommended that documentation for condition endorsement be submitted well before submitting documentation for building approval. Failure to address condition endorsement requirements prior to submitting for building approval may result in unexpected delays.*

Reason for condition

To ensure that building design contributes positively to adjoining land in a residential zone

#### **ENG sw2.1**

**The Council's stormwater infrastructure adjacent to / within the subject site must be protected from damage during the construction of the development.**

**Digital copies of a pre and post construction work CCTV video and associated report(s) of any Council stormwater main within two metres of the works must be submitted to Council:**

1. prior to issue of any consent under the Building Act 2016 / the commencement of work, and
2. after completion of all work but prior to the issue of any Certificate of Completion.

**The pre and post construction work CCTVs will be relied upon to establish the extent of damage caused to the Council's infrastructure during construction. In the event that the owner fails to provide to the Council a pre-construction works CCTV video of the Council's infrastructure, then any damage to the Council infrastructure identified in the post construction CCTV will be deemed to be the responsibility of the owner.**

*Advice: Due to the diameter of the main, a tractor camera will be required to obtain adequately clear footage.*

Reason for condition

To ensure that any of the Council infrastructure and/or site-related service connections affected by the proposal will be altered and/or reinstated at the owner's full cost.

**ENG sw3**

The proposed works (including foundations and overhangs) must be designed to ensure the long term protection of and access to the Council's stormwater infrastructure.

A detailed design certified by a suitably qualified engineer must be submitted and approved prior to issue of any consent under Building Act 2016. The detailed design must:

1. Demonstrate how the design will ensure the protection of and provide access to the Council's stormwater main.
2. Include certification by a suitably qualified engineer (that the works do not impose any loads on the storm water main and the structure is entirely independent of the main and its trenching).
3. Demonstrate how adequate access to the main is maintained.
4. Demonstrate that no additional loads are imposed on the stormwater main.
5. Demonstrate that the structure is entirely independent of the main and its trenching.
6. Include (but not be limited to) details of cross-sections, minimum separation, adequate cover.

Prior to issue of any Certificate of Completion a suitably qualified engineer must confirm the installation of the works within two metres of Council's stormwater main is in accordance with the approved drawings and complies with this condition. Should any remediation works be required, these must be carried out at the developer's cost.

All work required by this condition must be undertaken in accordance with the approved design.

*Advice: Once the detailed design drawings has been approved the Council will issue a condition endorsement (see general advice on how to obtain condition endorsement)*

*As the proposal does not demonstrate the developers intention around the public stormwater infrastructure this condition is required if works are to occur over or within 2 metres of the public stormwater infrastructure. Relaxation of this condition can only be granted by the environmental engineering unit.*

Reason for condition

To ensure the protection of the Council's hydraulic infrastructure.

**ENG sw4**

**The development must be drained to Council infrastructure. Any new stormwater connection required must be constructed, and existing redundant connections must be sealed at the owner's expense prior to issue of a Certificate of Completion or first occupation whichever comes first.**

**Detailed design drawings showing both existing and proposed services must be submitted and approved, prior to issue of any consent under the Building Act 2016 / commencement of work. The detailed design drawings must include:**

1. **the location of the proposed connections and all existing connections;**
2. **the size and design of the connection(s) such that they are appropriate to safely service the development given the limited receiving capacity of Council infrastructure;**
3. **long-sections of the proposed connection(s) clearly showing any nearby services, cover, size, material and delineation of public and private infrastructure; and**
4. **Clearly distinguish between public and private infrastructure**
5. **Be checked and certified by a qualified and experienced engineer.**

**All work required by this condition must be undertaken in accordance with the approved detailed design drawings.**

*Advice: Once the detailed design drawings have been approved the Council will issue a condition endorsement (see general advice on how to obtain condition endorsement)*

*Please note that once the condition endorsement has been issued you will need to contact Council's City Infrastructure Division to initiate an application for service connection.*

*Any proposed public stormwater infrastructure will require detailed engineering drawings, which must be checked and certified by a qualified and experienced Civil Engineer. The construction of public infrastructure will require a Permit to Construct Public Infrastructure.*

Reason for condition

To ensure the site is drained adequately

**ENG sw5**

**The new stormwater infrastructure must be constructed and any existing infrastructure made redundant prior to issue of a completion certificate or first occupation, whichever occurs first.**

**Engineering design drawings must be submitted and approved, prior to commencement of work. The engineering drawings must:**

- 1. be certified by a qualified and experienced Engineer.**
- 2. show in both plan and long-section the proposed stormwater mains, including but not limited to, connections, flows, velocities, hydraulic grade lines, clearances, cover, gradients, sizing, material, pipe class, adequate working platforms around manholes, easements and inspection openings.**
- 3. Include the associated calculations and catchment area plans. The stormwater system (including defined overland flow paths) must cater for all 1% AEP flows as at 2100 (i.e including climate change loading) from a fully developed catchment. The main itself must be sized to accommodate at least the 5% AEP flows from a fully-developed catchment.**
- 4. Clearly distinguish between public and private infrastructure.**
- 5. Be substantially in accordance with the LGAT drawings.**

**All work required by this condition must be undertaken in accordance with the approved engineered drawings.**

*Advice: Once the engineered drawings has been approved the Council will issue a condition endorsement (see general advice on how to obtain condition endorsement).*

*Please note that once the condition endorsement has been issued you will need to contact Council's City Infrastructure Division to obtain a Permit to Construct Public Infrastructure.*

Reason for condition

To ensure Council's hydraulic infrastructure meets acceptable standards.

**ENG 1**

The cost of repair of any damage to the Council's infrastructure resulting from the implementation of this permit, must be met by the owners within 30 days of the completion of the development or as otherwise determined by the Council.

A photographic record of the Council's infrastructure adjacent to the subject site must be provided to the Council prior to any commencement of works.

A photographic record of the Council's infrastructure (e.g. existing property service connection points, roads, buildings, stormwater, footpaths, driveway crossovers and nature strips, including if any, pre-existing damage) will be relied upon to establish the extent of damage caused to the Council's infrastructure during construction. In the event that the owner/developer fails to provide to the Council a photographic record of the Council's infrastructure, then any damage to the Council's infrastructure found on completion of works will be deemed to be the responsibility of the owner.

Reason for condition

To ensure that any of the Council's infrastructure and/or site-related service connections affected by the proposal will be altered and/or reinstated at the owner's full cost.

#### **ENG s1**

Site survey drawings must be submitted and approved, prior to any consent granted under the Building Act 2016. The Survey drawings must:

1. be certified by a qualified and experienced Surveyor.
2. Show a site plan of stormwater mains, including but not limited to, location of main and connections, surface levels, invert levels, material, pipe size, manholes, easements and inspection openings.
3. Clearly distinguish between public and private infrastructure.
4. Show all other infrastructure in the area both private and public, clearly distinguish between public and private.

All work required by this condition must be undertaken prior to the removal of existing infrastructure or approval of new infrastructure.

*Advice: Once the Survey drawings has been accepted the Council will issue a condition endorsement (see general advice on how to obtain condition endorsement)*

Reason for condition

To ensure the protection of the Council's hydraulic infrastructure, and ensure the continued operation and service of the current stormwater infrastructure.

**ENG s2**

**The cost of any alterations to the Council's or third-party infrastructure, including the site's service connection points, incurred as a result of the proposed development works must be met by the owner / developer.**

Reason for condition

To ensure that any of the Council infrastructure and/or site-related service connections affected by the proposal will be altered and/or reinstated at the owner's full cost.

**ENV 1**

**Sediment and erosion control measures sufficient to prevent sediment from leaving the site must be installed prior to any disturbance of the site, and maintained until all areas of disturbance have been stabilized or re-vegetated.**

*Advice: For further guidance in preparing a Soil and Water Management Plan – in accordance with Fact sheet 3 Derwent Estuary Program click [here](#).*

Reason for condition

To avoid the sedimentation of roads, drains, natural watercourses, Council land that could be caused by erosion and runoff from the development, and to comply with relevant State legislation.

**ENVHE 1**

**Recommendations in the reports *Preliminary Environmental Site Assessment (PSEA) Report* prepared by EM&C and dated 26 August 2018 and *Construction and Environmental Management Plan* prepared by EM&C and dated 27 November 2018 must be implemented.**

Reason for condition

To ensure that the risk to future occupants of the building remain low and acceptable.

**ADVICE**

The following advice is provided to you to assist in the implementation of the planning permit that has been issued subject to the conditions above. The advice is not exhaustive and you must inform yourself of any other legislation, by-laws, regulations, codes or standards that will apply to your development under which you may need to obtain an approval. Visit the Council's [website](#) for further information.

Prior to any commencement of work on the site or commencement of use the following additional permits/approval may be required from the Hobart City Council.

### **CONDITION ENDORSEMENT ENGINEERING**

All engineering drawings required to be submitted and approved by this planning permit must be submitted to the City of Hobart as a CEP (Condition Endorsement) via the City's [Online Service Development Portal](#). When lodging a CEP, please reference the PLN number of the associated Planning Application. Each CEP must also include an estimation of the cost of works shown on the submitted engineering drawings. Once that estimation has been confirmed by the City's Engineer, the following fees are payable for each CEP submitted and must be paid prior to the City of Hobart commencing assessment of the engineering drawings in each CEP:

#### **Value of Building Works Approved by Planning Permit Fee:**

- Up to \$20,000: \$150 per application.
- Over \$20,000: 2% of the value of the works as assessed by the City's Engineer per assessment.

These fees are additional to building and plumbing fees charged under the Building and Plumbing Regulations.

Once the CEP is lodged via the [Online Service Development Portal](#), if the value of building works approved by your planning permit is over \$20,000, please contact the City's Development Engineer on 6238 2715 to confirm the estimation of the cost of works shown on the submitted engineering drawings has been accepted.

Once confirmed, please call one of the City's Customer Service Officers on 6238 2190 to make payment, quoting the reference number (ie. CEP number) of the Condition Endorsement you have lodged. Once payment is made, your engineering drawings will be assessed.

### **BUILDING PERMIT**

You may need building approval in accordance with the *Building Act 2016*. Click [here](#) for more information.

This is a Discretionary Planning Permit issued in accordance with section 57 of the *Land Use Planning and Approvals Act 1993*.

#### **PLUMBING PERMIT**

You may need plumbing approval in accordance with the *Building Act 2016*, *Building Regulations 2016* and the National Construction Code. Click [here](#) for more information.

#### **SPECIAL CONNECTION PERMIT**

You may need a Special Connection Permit (Trade Waste) in accordance with the *Plumbing Regulations 2014* and the Tasmanian Plumbing Code. Click [here](#) for more information.

#### **PUBLIC HEALTH**

You may be required to provide approved/endorsed plans for a food business fit out, in accordance with the National Construction Code - Building Code of Australia including Tas Part H102 for food premises which must have regard to the FSANZ Food Safety Standards. Click [here](#) for more information.

#### **PERMIT TO CONSTRUCT PUBLIC INFRASTRUCTURE**

You may require a permit to construct public infrastructure, with a 12 month maintenance period and bond (please contact the Hobart City Council's City Infrastructure Division to initiate the permit process).

#### **NEW SERVICE CONNECTION**

Please contact the Hobart City Council's City Infrastructure Division to initiate the application process for your [new stormwater connection](#).

#### **WASTE DISPOSAL**

It is recommended that the developer liaise with the Council's Cleansing and Solid Waste Unit regarding reducing, reusing and recycling materials associated with demolition on the site to minimise solid waste being directed to landfill.

Further information regarding waste disposal can also be found on the Council's [website](#).

#### **FEES AND CHARGES**

Click [here](#) for information on the Council's fees and charges.

**DIAL BEFORE YOU DIG**

Click [here](#) for dial before you dig information.

#### Advice

##### General

For information on TasWater development standards, please visit

<http://www.taswater.com.au/Development/Development-Standards>

For application forms please visit <http://www.taswater.com.au/Development/Forms>

##### Trade Waste

Prior to any Building and/or Plumbing work being undertaken, the applicant will need to make an application to TasWater for a Certificate for Certifiable Work (Building and/or Plumbing). The Certificate for Certifiable Work (Building and/or Plumbing) must accompany all documentation submitted to Council. Documentation must include a floor and site plan with:

Location of all pre-treatment devices i.e. grease arrestor;

Schematic drawings and specification (including the size and type) of any proposed pre-treatment device and drainage design; and

Location of an accessible sampling point in accordance with the TasWater Trade Waste Flow Meter and Sampling Specifications for sampling discharge.

Details of the proposed use of the premises, including the types of food that will be prepared and served; and

The estimated number of patrons and/or meals on a daily basis.

At the time of submitting the Certificate for Certifiable Work (Building and/or Plumbing) a Trade Waste Application form is also required.

If the nature of the business changes or the business is sold, TasWater is required to be informed in order to review the pre-treatment assessment.

The application forms are available at <http://www.taswater.com.au/Customers/Liquid-Trade-waste/Commercial>

#### Declaration

The drawings/documents and conditions stated above constitute TasWater's Submission to Planning Authority Notice.

Mr Paul Curtain  
General Manager  
North Hobart Football ClubVia Email: [gm@nhfc@net.au](mailto:gm@nhfc@net.au)

Dear Mr Curtain,

**NOTICE OF LAND OWNER CONSENT TO  
LODGE A PLANNING APPLICATION**

Site Address: 1-5 Ryde Street North Hobart (North Hobart Oval)

Description of Proposal: Partial Demolition and Alterations for Kiosk, and New Building for Coaches and Media Boxes.

Applicant Name: North Hobart Football Club Ltd

PLN (if applicable): PLN-18-738

I write to advise that pursuant to Section 52 of the *Land Use Planning and Approvals Act 1993*, I grant my consent on behalf of the Hobart City Council as the owner/administrator of the above land for you to make application to the City for a planning permit for the development described above and as per the attached documents.

Please note that the granting of the consent is only for the making of the application and in no way should such consent be seen as prejudicing any decision the Council is required to make as the statutory planning authority or as the owner/administrator of the land.

Yours faithfully,

A handwritten signature in blue ink, appearing to read 'N D Heath'.

### LAND OWNER CONSENT TO LODGE A PLANNING APPLICATION

Site Address: 1-5 Ryde Street North Hobart (North Hobart Oval)

Description of Proposal: Partial Demolition and Alterations for Kiosk, and New Building for Coaches and Media Boxes.

Applicant Name: North Hobart Football Club Ltd

PLN (if applicable): PLN-18-738

The land indicated above is owned by the Hobart City Council.

The applicant proposes to lodge an application for a permit, pursuant to the *Land Use Planning and Approvals Act 1993*, in respect to the proposal described above.

Part or all of the application proposes use and/or development on land owned or administered by the City located at 1-5 Ryde Street North Hobart (as shown on the attached plans).

Being and as General Manager of the Hobart City Council, I provide written permission to the making of the application pursuant to Section 52(1B)(b) of the *Land Use Planning and Approvals Act 1993*.

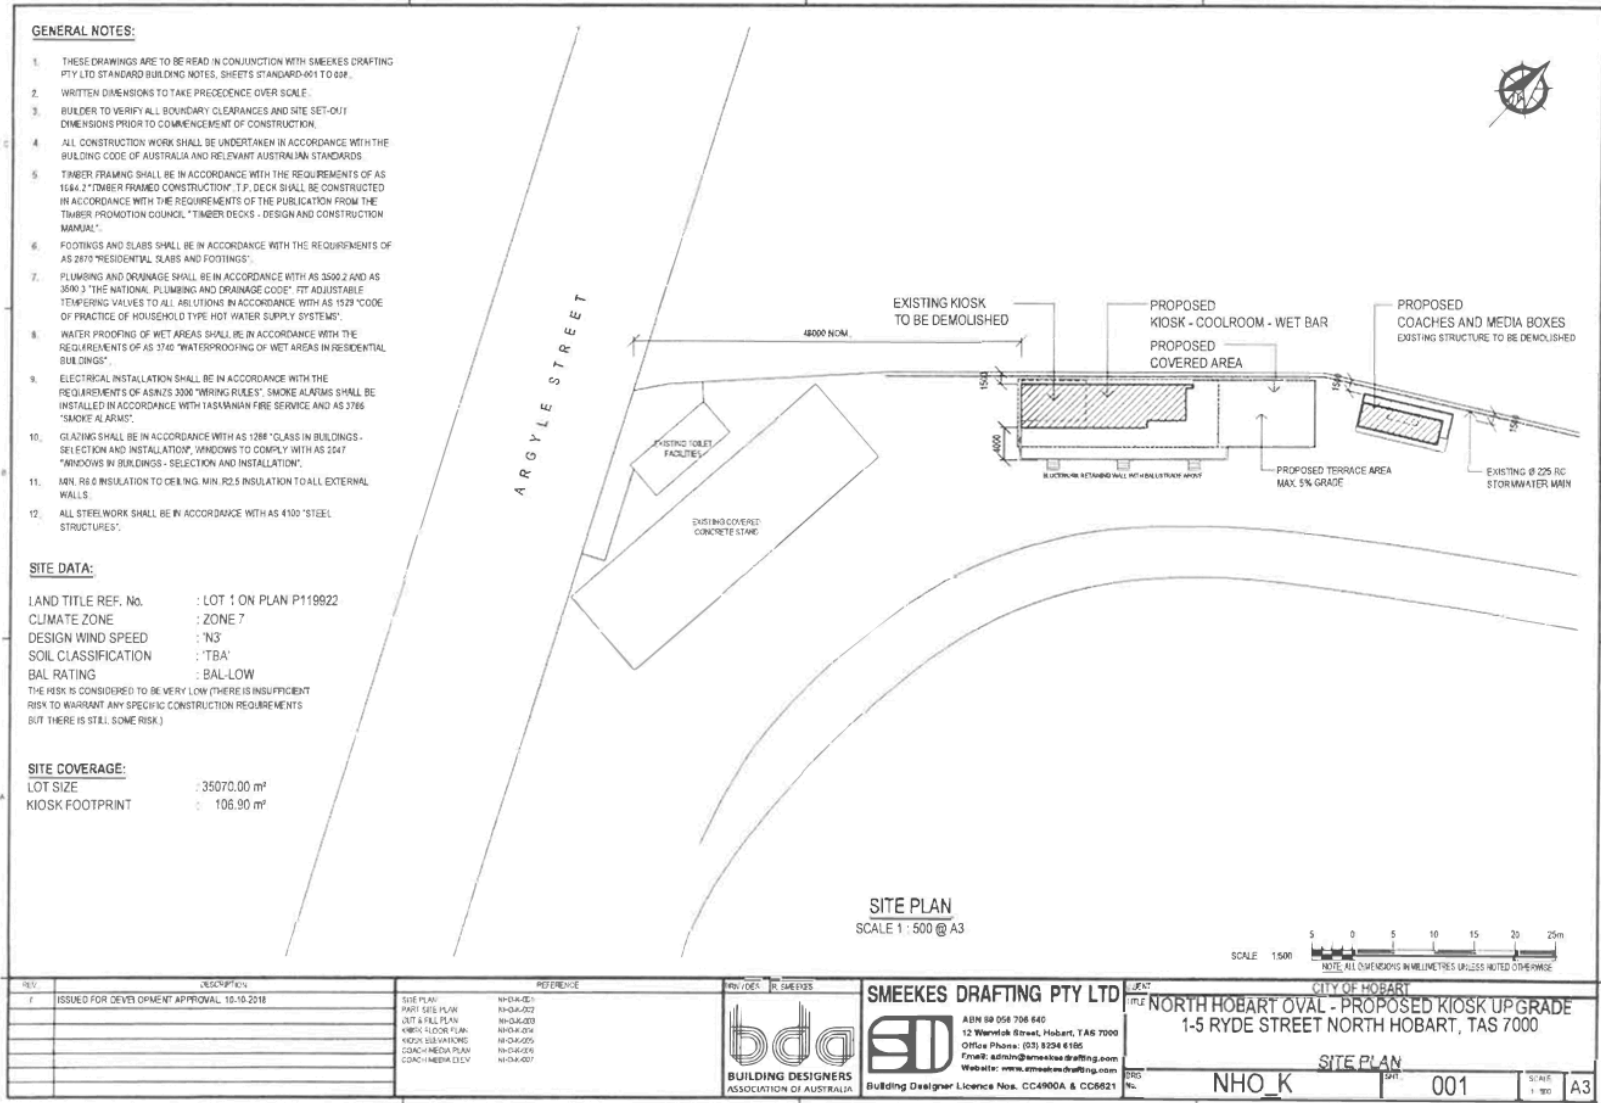

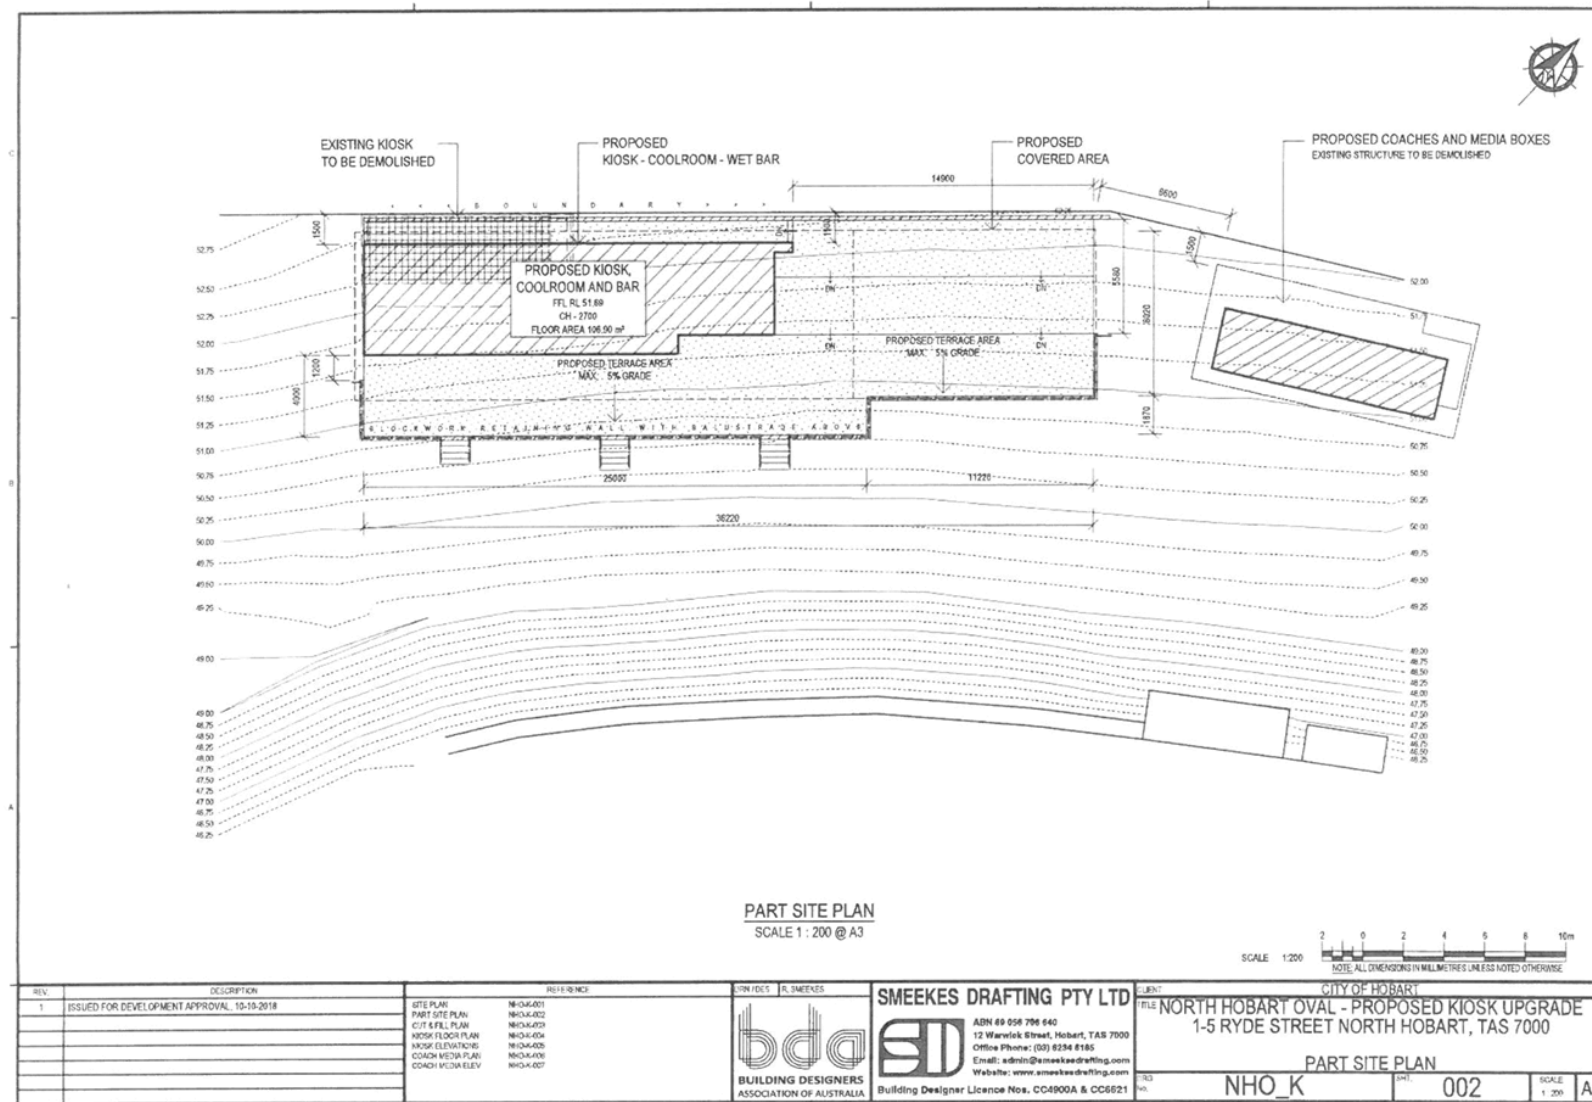

(N D Heath)  
GENERAL MANAGER

Date: 21/1/18

**This consent is for the making of a planning application only, and does not constitute landlord consent for the development to occur.**

CIVIL AND HYDRAULIC NOTES

GENERAL NOTES

- 1. THE MAIN CONTRACTOR AND ALL SUB CONTRACTORS SHALL COMPLY WITH THE STATE WORK HEALTH AND SAFETY ACT AND ALL RELEVANT CODES OF PRACTICE.
- 2. ALL HYDRAULICS WORKS TO BE CARRIED OUT IN ACCORDANCE WITH IPWEA STANDARD DRAWINGS AND SPECIFICATIONS. (WSAA SEWERAGE CODE OF AUSTRALIA & WATER SUPPLY CODE OF AUSTRALIA) AND TO THE SATISFACTION OF COUNCIL'S DEVELOPMENT ENGINEER
- 3. THE ELECTRICAL CONTRACTOR IS RESPONSIBLE FOR CONTACTING TASNETWORKS TO APPLY FOR NEW CONNECTIONS AND/OR ADDITIONAL SUPPLY. SUFFICIENT TIME FOR ELECTRICAL DESIGN AND REVIEW PROCESSES SHOULD BE ALLOWED FOR
- 4. NO TOP SOIL SHALL BE REMOVED FROM THE SITE WITHOUT THE CONSENT OF COUNCIL. TOP SOIL DISTURBED OR REMOVED AS A RESULT OF WORKS SHALL BE STOCK-PILED ON SITE AND LATER USED FOR REDRESSING ANY DISTURBED SURFACES.
- 5. ALL DISTURBED SURFACES ON SITE, EXCEPT THOSE SET ASIDE FOR ROADWAYS AND FOOTPATHS SHALL BE DRESSED WITH IMPORTED FILL AND REVEGETATED TO THE SATISFACTION OF THE COUNCIL'S DEVELOPMENT ENGINEER
- 6. ALL EXISTING SERVICES TO BE LOCATED ON SITE PRIOR TO THE COMMENCEMENT OF WORKS.
- 7. ALL LEVELS TO BE CONFIRMED ON SITE PRIOR TO COMMENCEMENT OF WORKS.
- 8. ALL CONNECTIONS TO EXISTING STORMWATER MAINS TO BE CARRIED OUT BY COUNCIL AT DEVELOPERS COST UNLESS APPROVED OTHERWISE.
- 9. GENERAL MATERIALS, INSTALLATION AND TESTING SHALL COMPLY WITH TASMANIAN MUNICIPAL STANDARDS PART 4.
- 10. EXCAVATED AND IMPORTED MATERIAL USED AS FILL TO BE APPROVED BY ENGINEER PRIOR TO INSTALLATION.
- 11. ANY DEPARTURES FROM THE DESIGN DRAWINGS ARE TO BE AT THE WRITTEN APPROVAL OF THE ENGINEER AND APPROVAL FROM THE AUTHORITY. CHANGES INCLUDES CONFLICTS WITH EXISTING SERVICES.
- 12. UNLESS NOTED OTHERWISE, THESE NOTES SHALL APPLY TO ALL DRAWINGS IN THE SET
- 13. BATTERS:
  - MAX EMBANKMENT SLOPE 1:3.0
  - MAX CUTTING SLOPE 1:2.0 (LOOSE ROCK)
  - 1:3.0 (SOIL)

APPROVALS:

- 1. THE CONTRACTOR IS RESPONSIBLE FOR ENSURING THAT A VALID BUILDING AND PLUMBING PERMIT IS IN PLACE FOR THE WORK AND THAT THE BUILDING SURVEYOR IS NOTIFIED OF ALL SITE INSPECTION REQUESTS.
- 2. THE APPLICANT SHALL NOT COMMENCE CIVIL CONSTRUCTION WORKS WITHIN A ROAD RESERVE UNTIL THE FOLLOWING REQUIREMENTS ARE MET:
- 3. A PERMIT TO CARRY OUT WORKS WITHIN A COUNCIL ROAD RESERVATION HAS BEEN ISSUED BY THE COUNCIL AND THE ASSOCIATED FEE PAYMENT MADE.
- 4. TRAFFIC MANAGEMENT AND PEDESTRIAN PLAN HAS BEEN PRODUCED AND FOLLOWED IN ACCORDANCE WITH DEPARTMENT OF INFRASTRUCTURE, ENERGY AND RESOURCES TRAFFIC CONTROL AT WORK SITES' CODE OF PRACTICE.

GENERAL HYDRAULICS NOTES:

- 1. DURING CONSTRUCTION ANY OPEN PIPES TO BE SEALED TEMPORARILY DURING WORKS TO PREVENT ENTRY OF FOREIGN MATTER
- 2. CONCEAL ALL PIPEWORK IN DUCTS, CEILING SPACES, WALL CAVITIES UNLESS OTHERWISE NOTED
- 3. CONFIRM ALL INVERT LEVELS PRIOR TO EXCAVATION.
- 4. THE LOCATION OF EXISTING SERVICES SHOULD BE CONFIRMED ONSITE INCLUDING: MAINS WATER, GAS, TELECOMMUNICATIONS, POWER, SEWER STORMWATER.
- 5. ALL PIPEWORK UNDER TRAFFICABLE AREAS TO BE BACKFILLED TO FULL DEPTH WITH DIER CLASS A 19MM FCR COMPACTED TO AS3798.
- 6. FOR CLASS H AND E SITES, JOINTS IN PLUMBING SHALL BE ARTICULATED WITHIN 3M OF THE BUILDING UNDER CONSTRUCTION TO ACCOMMODATE GROUND MOVEMENT WITHOUT LEAKAGE.
- 7. ALL PIPEWORK SHALL BE ADEQUATELY SUPPORTED. SUPPORT SHALL ALLOW FOR EXPANSION AND BE FITTED AT THE TIME OF PIPE INSTALLATION
- 8. WHERE PIPEWORK PENETRATES FIRE RATED WALL OR FLOORS A FIRE STOP COLLAR SHALL BE INSTALLED

SEWER NOTES:

- 1. ALL WORKS TO BE CARRIED OUT IN ACCORDANCE WITH WSAA SEWERAGE CODE OF AUSTRALIA WSA 02-2014-3.1 MRWA EDITION V2.0, TASWATERS SUPPLEMENT TO THIS CODE, AS3500.2.2003 AND TO THE SATISFACTION OF TASWATER'S DEVELOPMENT ENGINEER.
- 2. ALL EXISTING SERVICES TO BE LOCATED ON SITE PRIOR TO THE COMMENCEMENT OF WORKS.
- 3. ALL CONNECTIONS TO EXISTING MAINS TO BE CARRIED OUT BY TASWATER'S APPROVED CONTRACTOR AT DEVELOPERS COST UNLESS APPROVED OTHERWISE.
- 4. GENERAL MATERIALS, INSTALLATION & TESTING SHALL COMPLY WITH WSAA SEWERAGE CODE OF AUSTRALIA WSA 02-2014-3.1 MRWA EDITION V2.0, TASWATERS SUPPLEMENT TO THIS CODE, AS3500.2.2003 AND TO THE SATISFACTION OF TASWATER'S DEVELOPMENT ENGINEER.
- 5. ALL DROPS MUST BE INTERNAL AND IN ACCORDANCE WITH MRWA S-311.
- 6. ALL PIPE WORK UNDER TRAFFICABLE AREAS, INCLUDING DRIVEWAYS, IS TO BE BACKFILLED WITH FCR.
- 7. LOT CONNECTIONS SHALL BE DN100 UPVC U.N.O. AS PER MRWA S-302 AND BRING INSPECTION OPENING TO SURFACE INSIDE LOT BOUNDARY.
- 8. ALL SEWER MAINS TO BE PIPE CLASS S8.
- 9. PIPEWORK SHALL BE PRESSURE TESTED PROGRESSIVELY DURING INSTALLATION TO ENSURE ABSENCE OF LEAKS.
- 10. ALL PIPEWORK SHALL BE INSTALLED AS CLOSE AS PRACTICABLE TO THE UNDERSIDE OF FLOORS.

STORMWATER NOTES:

- 1. ALL WORKS TO BE CARRIED OUT IN ACCORDANCE WITH COUNCIL MUNICIPAL STANDARDS, AS3500 AND IPWEA (TAS) MUNICIPAL STANDARD DRAWINGS AND SPECIFICATIONS WHERE APPLICABLE AND TO THE SATISFACTION OF COUNCIL'S MUNICIPAL ENGINEER
- 2. ALL EXISTING SERVICES TO BE LOCATED ON SITE PRIOR TO THE COMMENCEMENT OF WORKS. ALL CONNECTIONS TO EXISTING MAINS TO BE CARRIED OUT BY COUNCIL AT DEVELOPERS COST UNLESS APPROVED OTHERWISE
- 3. GENERAL MATERIALS, INSTALLATION & TESTING SHALL COMPLY WITH TASMANIAN MUNICIPAL STANDARDS PART 4. PROVIDE 600mm MIN COVER TO ALL SERVICES.
- 4. ALL PIPE WORK UNDER TRAFFICABLE AREAS INCLUDING DRIVEWAYS IS TO BE FILLED WITH FCR.
- 5. LOT CONNECTIONS SHALL BE DN150 UPVC UNO MINOR CLASS S8 TO BE CLASS S84. PIPE UNDER ROADS TO BE CLASS S8.
- 6. ALL MAINTENANCE HOLES DEEPER THAN 1m FROM FINISHED SURFACE LEVEL TO MAINTENANCE HOLE BASE TO BE FITTED WITH APPROVED STEP IRONS.
- 7. IPWEA STANDARD DRAWINGS REFERENCED ARE THE MOST RECENT DRAWING SET UNO.

DISCLAIMER

ENGINEERING NOTES ARE INTENDED FOR USE AS A GUIDE TO RELEVANT CODES, REGULATIONS AND STANDARDS FOR THE BUILDER OR CONTRACTOR DURING THE CONSTRUCTION PROCESS, THEY SHALL NOT REPLACE THEM IN ANY WAY. THESE NOTES ARE NOT SITE SPECIFIC AND SHALL NOT BE USED TO CONTRAVENE APPROVED PLANS OR TO SPECIFY ANY UNAPPROVED WORKS.

WATER NOTES:

- 1. ALL WORKS TO BE CARRIED OUT IN ACCORDANCE WITH WSAA WATER SUPPLY CODE OF AUSTRALIA WSA 03-2011-3.1 AND TO THE SATISFACTION OF TASWATERS DEVELOPMENT ENGINEER.
- 2. SUPPLEMENT TO THIS CODE AND TO THE SATISFACTION OF TASWATERS DEVELOPMENT ENGINEER.
- 3. ALL EXISTING SERVICES TO BE LOCATED ON SITE PRIOR TO THE COMMENCEMENT OF WORK.
- 4. ALL CONNECTIONS TO EXISTING MAINS TO BE CARRIED OUT BY TASWATER AT DEVELOPERS COST UNLESS APPROVED OTHERWISE.
- 5. GENERAL MATERIALS INSTALLATION AND TESTING SHALL COMPLY WITH WSA 03-2011-3.1 AND TASWATER APPROVED PRODUCTS CATALOGUE.
- 6. WATER MAIN TO BE oPVC SERIES 2 CLASS 16 OR APPROVED EQUIVALENT, WITH RODS AND CONNECTIONS BEING POLY PN16 PE100.
- 7. THRUST BLOCKS SHALL BE INSTALLED AT ALL TEES, BLANK ENDS, VALVES, FIRE HYDRANTS, REDUCERS AND BENDS GREATER THAN 5'.
- 8. INDIVIDUAL LOT CONNECTIONS TO BE MIN DN25 ID20 PN16 POLY UNO.
- 9. DEVELOPER TO MAKE APPLICATION TO TASWATER FOR THE SUPPLY OF 20mm WATER METER AND BOX. PRIOR TO COMMENCEMENT OF WORKS ONSITE. METER TO BE INSTALLED BY PLUMBING CONTRACTOR.
- 10. ALL ISOLATION VALVES SHALL BE INSTALLED IN ACCESSIBLE LOCATIONS. VALVES LOCATED IN WALLS OR DUCTS SHALL BE FITTED WITH APPROVED ACCESS COVERS.
- 11. INTERNAL PLUMBING SHALL BE CONSTRUCTED IN ACCORDANCE WITH AS3500 PARTS 1, 2 & 3 AND THE TASMANIAN PLUMBING CODE
- 12. THE PLUMBER SHALL ARRANGE FOR ALL INSPECTIONS AND PRESSURE TESTING REQUIRED BY TASWATER OR THE LOCAL AUTHORITY PRIOR TO CONCEALMENT.
- 13. ALL STOP VALVES TO BE CLOCKWISE CLOSING.
- 14. PROVIDE C.I. VALVE BOX COVERS TO ALL VALVES AND FIRE PLUG.
- 15. STOP VALVES AND FIRE PLUGS SHALL BE MARKED IN ACCORDANCE WITH THE IPWEA FIRE HYDRANT GUIDELINES: TASMANIA DIVISION.
- 16. FIRE PLUGS AND VALVE POSITIONS TO BE MARKED ON KERB BACKS WITH HIMARK CONCRETE PAINT.
- 17. PROVIDE ELECTROMAGNETIC METAL IMPREGATED TAPE IN ALL NON METALLIC PIPE TRENCHES. ENSURE TAPE TERMINATIONS ARE ACCESSIBLE.
- 18. ALL PROPERTY CONNECTIONS SHALL BE CONSTRUCTED IN ACCORDANCE WITH MRWA-W-110 AND MRWA-W-111 AND TASWATER STANDARD DRAWING TW-SD-W-20 SERIES. THEY SHALL BE DN25 (ID20) HDPE PE100 SDR11 PN16 PIPE
- 19. ALL FITTINGS TO BE F & E.
- 20. FIRE PLUGS TO HAVE 100mm RISERS WITH SPRING TYPE PLUGS.
- 21. TASWATER TO WITNESS PRESSURE TEST TO 1200kPa PRIOR TO BACKFILL AT JOINTS.
- 22. MAIN TO BE DISINFECTED PRIOR TO CONNECTION TO THE RETICULATION NETWORK. REFER TO WSA CODE FOR DETAILS.
- 23. PLACEMENT OF WATER MAINS FILL REQUIRES THE CONTRACTOR TO PROVIDE DOCUMENTARY EVIDENCE INCLUDING: THE COMPOSITION OF FILL MATERIAL, VERIFYING THAT IT CONTAINS NO ORGANIC OR OTHER MATERIALS THAT DECOMPOSE OR OTHERWISE LEAD TO LONG TERM SETTLEMENT.

ROAD NOTES:

- 1. MINIMUM SUB BASE THICKNESS TO BE 200mm.
- 2. PRIOR TO PLACEMENT OF SUB BASE COURSE, PAVEMENT CUT IS TO BE ROLLED AND TESTED FOR CBR VALUES BY METHOD APPROVED BY THE SUPERINTENDENT. WHERE THE CBR VALUES ARE LESS THAN 5 WITHIN THE FIRST 200mm THEN ADDITIONAL TESTS WILL BE REQUIRED TO ALLOW SUFFICIENT DESIGN ALTERATIONS TO THE SUB BASE.
- 3. PAVEMENT DESIGN BASED ON A CBR VALUE OF 3-4%.
- 4. ROAD MARKINGS AND SIGNS AS PER AS1742.
- 5. IF THE CBR VALUE IS LESS THAN 5 AT ANY DEPTH GREATER THAN 200mm THEN THE SUB BASE IS TO BE INCREASED GENERALLY ACCORDING TO THE FOLLOWING TABLE & CONSULT ENGINEER:

CBR VALUES:

DESIGN:

- 5-12 AS PER PAVEMENT DETAIL
- 4 ADVISE & CONSULT ENGINEER. TYPICALLY INCREASE SUB BASE TO 400mm THICK (SUBGRADE REPLACEMENT)
- 4 ADVISE & CONSULT ENGINEER. SPECIAL PAVEMENT DESIGN TO BE SPECIFIED.

DRIVEWAY NOTES:

- 1. EXCAVATED AND IMPORTED MATERIAL USED AS FILL IS TO BE APPROVED BY ENGINEER PRIOR TO INSTALLATION.
- 2. FILL MATERIAL SHALL BE WELL GRADED AND FREE OF BOULDERS OR COBBLES EXCEEDING 150mm IN DIAMETER UNLESS APPROVED OTHERWISE
- 3. FILL REQUIRED TO SUPPORT DRIVEWAYS INCLUDING FILL IN EMBANKMENTS THAT SUPPORT DRIVEWAYS SHALL BE INSTALLED IN ACCORDANCE WITH THE FOLLOWING REQUIREMENTS:
  - 4. TOP SOIL AND ORGANIC MATTER SHALL BE STRIPPED TO A MINIMUM OF 100mm.
  - 5. THE SUB GRADE SHALL BE CHECKED FOR A MINIMUM BEARING CAPACITY OF 50 kPa.
  - 6. FILL IN EMBANKMENTS SHALL BE KEYED 150mm INTO NATURAL GROUND.
  - 7. THE FILL SHALL BE COMPACTED IN HORIZONTAL LAYERS OF NOT MORE THAN 200mm.
  - 8. EACH LAYER SHALL BE COMPACTED TO A MINIMUM DENSITY RATIO OF 95%, IT IS THE BUILDERS RESPONSIBILITY TO ENSURE THAT THIS IS ACHIEVED.
  - 9. WHERE THE ABOVE REQUIREMENTS CANNOT BE ACHIEVED THE ENGINEER SHALL BE CONSULTED AND THE FORMATION SHALL BE PROOF ROLLED (UNDER SUPERVISION OF THE ENGINEER) TO DEMONSTRATE COMPACTION PRIOR TO THE PLACEMENT OF BASE OR SUB-BASE COURSES.
  - 10. UNREINFORCED CONCRETE KERBS AND CHANNELS SHALL HAVE TROWELLED JOINTS AT NOT MORE THAN 3.0m CRS

CONTROLLED FILL:

- 1. CONTROLLED FILL SHALL BE LAID IN STRICT ACCORDANCE WITH AS2870 AND AS3798 REQUIREMENTS. THE FOLLOWING METHOD IS APPROVED:
- 2. FILL MATERIAL SHALL BE WELL GRADED FCR OR SITE ROCK REVIEWED DURING EXCAVATION.
- 3. THE SUB GRADE SHALL BE CHECKED FOR BEARING CAPACITY WHICH IS A MINIMUM OF 50kPa FOR SLABS AND A MINIMUM OF 100kPa FOR FOOTINGS.
- 4. THE FILL SHALL BE COMPACTED IN HORIZONTAL LAYERS OF NOT MORE THAN 150mm
- 5. THE FILL SHALL BE COMPACTED TO A MINIMUM DENSITY RATIO OF 95% FOR RESIDENTIAL APPLICATIONS. IT IS THE BUILDERS RESPONSIBILITY TO ENSURE THAT THIS LEVEL OF COMPACTION IS ACHIEVED. IMPORTED MATERIAL, CONTRARY TO THE ABOVE SPECIFICATION, INTENDED FOR USE AS STRUCTURAL FILL SHALL BE APPROVED IN WRITING BY THE ENGINEER PRIOR TO USE.

CONCRETE:

- 1. CONCRETE SHALL BE NOT LESS THAN N25 GRADE, WITH 20mm NOMINAL MAXIMUM AGGREGATE SIZE, SLUMP SHALL BE SELECTED TO SUIT THE CONSTRUCTION CONDITIONS. UNLESS NOTED OTHERWISE THE MINIMUM APPROPRIATE SPECIFICATIONS FROM AS3600 AND AS2870 SHALL BE ADOPTED.
- 2. SAWN CONTROL JOINTS SHALL BE CONSTRUCTED AS SOON AS POSSIBLE WITHOUT RAVELING THE JOINT, GENERALLY THIS SHALL BE WITHIN 24 HOURS.
- 3. CONCRETE SHALL BE CURED FOR A MINIMUM OF 7 DAYS USING CURRENT BEST PRACTICE METHODS. SPRAY APPLIED CURING COMPOUNDS ARE GENERALLY NOT DEEMED SATISFACTORY AS SOLE CURING METHOD.
- 4. CONCRETE SHALL BE MECHANICALLY VIBRATED U.N.O.
- 5. ADDITIONAL WATER SHALL NOT BE ADDED TO THE CONCRETE ON SITE UNLESS SIGNED BY THE DRIVER AND APPROVED BY THE SUPPLIER.

NOTES

- GENERAL
  - TEMPORARY DRAINAGE CONTROL FLOW SHOULD BE DIVERTED AROUND THE WORK SITE WHERE POSSIBLE.
  - ALL DRAINAGE, EROSION AND SEDIMENT CONTROLS TO BE INSTALLED AND BE OPERATIONAL BEFORE COMMENCING UP-SLOPE EARTHWORKS.
  - ALL CONTROL MEASURES TO BE INSPECTED AT LEAST WEEKLY AND AFTER SIGNIFICANT RUNOFF PRODUCING STORMS.
  - CONTROL MEASURES MAY BE REMOVED WHEN ON-SITE EROSION IS CONTROLLED AND 70% PERMANENT SOIL COVERAGE IS OBTAINED OVER ALL UPSTREAM DISTURBED LAND.
  - IN AREAS WHERE RUNOFF TURBIDITY IS TO BE CONTROLLED, EXPOSED SURFACES TO BE EITHER MULCHED, COVERED WITH EROSION CONTROL BLANKETS OR TURFED IF EARTHWORKS ARE EXPECTED TO BE DELAYED FOR MORE THAN 14 DAYS.
  - STRAW BALE SEDIMENT TRAPS ARE A SECONDARY OPTION WHICH GENERALLY SHOULD NOT BE USED IF OTHER OPTIONS ARE AVAILABLE.
- SEDIMENT FENCE
  - NOT TO BE LOCATED IN AREAS OF CONCENTRATED FLOW.
  - NORMALLY LOCATED ALONG THE CONTOUR WITH A MAXIMUM CATCHMENT AREA 0.6HA PER 100M LENGTH OF FENCE.
  - WOVEN FABRICS ARE PREFERRED, NON-WOVEN FABRICS MAY BE USED ON SMALL WORK SITES, I.E. OPERATIONAL PERIOD LESS THAN 6 MONTHS OR ON SITE WHERE SIGNIFICANT SEDIMENT RUNOFF IS NOT EXPECTED.
  - FENCES ARE REQUIRED 2M MIN FROM TOE OF CUT OR FILL BATTERS, WHERE NOT PRACTICAL ON FENCE CAN BE AT THE TOE WITH A SECOND FENCE 1M MIN AWAY. FENCE SHOULD NOT BE LOCATED PARALLEL WITH TOE IF CONCENTRATION OF FLOW WILL OCCUR BEHIND THE FENCE.
- IT IS THE RESPONSIBILITY OF THE DEVELOPER TO INSTALL, MAINTAIN AND (UPON COMPLETION) REMOVE ALL SEDIMENT CONTROL MEASURES.
- PROVIDE TEMPORARY CONNECTION FROM DOWNPIPES TO STORMWATER DRAIN IMMEDIATELY FOLLOWING COMPLETION OF ROOF CLADDING, FASCIA AND GUTTER INSTALLATION. PERMANENT DOWNPIPE CONNECTION TO BE INSTALLED AT APPROPRIATE TIME OF EXTENSION CONSTRUCTION.
- ALL DIMENSIONS IN MILLIMETRES UNLESS INDICATED OTHERWISE.
- SWMP TO BE ESTABLISHED AND INSPECTED BY A COUNCIL OFFICER PRIOR TO COMMENCEMENT OF WORKS ON SITE.
- THIS PLAN HAS BEEN PREPARED IN ACCORDANCE WITH NRM SOUTH SOIL AND WATER MANAGEMENT OF CONSTRUCTION SITES - GUIDELINES AND TASMANIAN STANDARD DRAWINGS (TSD-SW28).

JSA reference: 18E02-36

Dear Ben,

**RE: 1-5 RYDE STREET, NORTH HOBART – NORTH HOBART OVAL**

**APPLICATION NO. PLN-18-738**

JSA Consulting Engineers have prepared a response to the request for information from Council dated 6<sup>th</sup> of November 2018 regarding the proposed new Kiosk and Media Box at North Hobart Oval.

The following points have been addressed:

**Sw 1** *A concept servicing plan to demonstrate how stormwater from the proposed development will be disposed of via gravity to public stormwater infrastructure with sufficient receiving capacity or to a Council approved system. Clearly distinguish between existing and proposed, and private vs public.*

**Response:**

Drawings C01 through H04 in the attached drawing set show the new proposed stormwater solution being a DN150 PVC connection, connected to the existing stormwater infrastructure. There is no additional loading on the existing pit being connected to.

**INFSw 1** *A scaled and dimensioned site plan demonstrating the following:*

- 1. The location of the DN225 public stormwater pipe on the property.*
- 2. The location of the proposed development in relation to the stormwater pipe.*
- 3. The location of the proposed footings from the development in relation to the stormwater pipe*

**Response:**

Drawings C01 and C02 detail the existing DN225. We are unable to confirm the size as the pipe is 3/4's full with gravel and mud.

Drawing C04 shows the new development in relation to the existing pipe and Manholes.

As it is proposed to make the existing stormwater infrastructure redundant in this location there is no need for footing relationship or zone of influence documentation.

**INFSw 2** If the developer intends to remove or realign the current stormwater pipe, please provide CCTV with associated site stormwater plan demonstrating the following:

1. CCTV footage and supporting documents showing the condition, any connections and location of downstream connection to public infrastructure.
2. A site plan showing size, location and depth including all incoming connection of the stormwater main.

**Response:**

Please see the attached report on the current stormwater pipe condition and connections.

The existing pipe and manholes should be made redundant as part of these works. The current condition and debris in the pipe make further investigation of this assent unachievable.

**PCL1** A construction and environmental management plan to ensure the excavated soil and associated contaminants do not spread to areas where ecological screening levels are applicable in accordance with the recommendations by EM&C in the Preliminary Environmental Site Assessment (PSEA) Report 1 5 Ryde Street, North Hobart, Tasmania dated 26 August 2018.

**Response:**

Drawing C05 in the attached set outlines a detailed soil and water management plan for works to site.

Please contact Michael Stanojevic on 6224 5625 or [michael@jsa.com.au](mailto:michael@jsa.com.au) if you require any further information.

Yours sincerely,

Michael Stanojevic

**Senior Engineering Technician**

|                    |              |  |

Site investigations on existing stormwater services completed to proposed development area.

All inlet pipes to Manhole 1 are redundant except for one connected to the existing kiosk and are DN100 earthenware.

The supposed DN225 between Manhole 1 and 2 can not be CCTV inspected due to debris in the pipe. The pipe is 3/4 full of mud and gravels. The exit pipe of Manhole 2 can not be CCTV inspected as this pipe is also full of gravel and mud.

It is recommended that the development have new sewer and stormwater connections as proposed in the planning approval drawings and the existing stormwater inspected as part of this report be made redundant.

## 1. INTRODUCTION

Environmental Management & Consulting Pty Ltd (EM&C) were engaged by North Hobart Football Club (NHFC) to prepare a Construction Environmental Management Plan (CEMP) for their proposed Kiosk Upgrade project, located at 1-5 Ryde Street, North Hobart, Tasmania (the 'site'). The location of the site within the suburb of North Hobart and state of Tasmania is shown on attached Figure 1.

This CEMP is to be read in conjunction with the Preliminary Environmental Assessment Report (The PSEA), prepared by EM&C for the NHFC [26 August 2018], Included as Appendix A.

### 1.1. OBJECTIVE

The objective of this CEMP is to provide NHFC's appointed Contractor with procedures to manage the environmental hazards and risks associated with excavation and backfilling works to ensure the protection of human health and the environment. The scope of the works addressed by this CEMP is identified in the Section 1.2 below.

### 1.2. SCOPE OF CIVIL WORKS

This CEMP addresses the following proposed NHFC Kiosk Upgrade work elements:

- Excavation of approximately 189m<sup>2</sup> to a depth of 51.49m RL - Assumed by EM&C to be equivalent with Australian Height Datum (AHD)
- Backfill of excavated material, over an area of 187m<sup>2</sup> to a height of 51.49
- Offsite disposal of contaminated soil unsuitable for onsite reuse

These depths may change to some degree to make allowances for structural components, such as concrete slabs, floor joists etc.

A cut and fill diagram is contained within the design documentation, included within Appendix B, Specifically drawing: NHO\_K 003.

This CEMP is limited to the above identified excavation and backfill scope of the kiosk building upgrade program and does not apply to any other potential work program at this site.

## 2. ROLES AND RESPONSIBILITIES

Project roles and responsibilities for implementation of this CEMP are identified in the table below. Note that responsibilities may be combined where parties take on multiple roles.

**Table 2.1 Roles and Responsibilities**

| Role                     | Identified Responsibilities  |
|--------------------------|--|
| Principal Contractor     | <p>Overarching responsibility for ensuring legal compliance with implementation and completion of construction works. Responsible for:</p> <ul style="list-style-type: none"> <li>Communicating with project stakeholders, including: <ul style="list-style-type: none"> <li>Site Owner.</li> <li>EPA Tasmania.</li> <li>Local Council.</li> <li>Adjacent Property Owners.</li> <li>Utility Owners.</li> </ul> </li> <li>Investigation of environmental incidents (with Civil Works Contractor)</li> <li>Oversight of the appointed Civil Contractor – to insure implementation and compliance with the CEMP.</li> <li>Appointment of the Environmental Consultant</li> </ul>  |
| Civil Works Contractor   | <p>Implementing the requirements outlined in this CEMP, including:</p> <ul style="list-style-type: none"> <li>Compliance with regulatory, legal and other identified CEMP requirements pertaining to the redevelopment works.</li> <li>Inspecting and maintaining plant and equipment in accordance with industry standards, guidelines and regulations.</li> <li>Management of all soil removed during excavation or imported to site, including: <ul style="list-style-type: none"> <li>Controls to mitigate the generation of dust,</li> <li>Sediment run-off;</li> <li>Unwanted odour;</li> <li>Decontamination of mobile plant and equipment to avoid off-site spread of soil;</li> <li>Reuse of excavated soil onsite; and</li> <li>Removal, transport and off-site disposal of soil removed from the site in accordance with Tasmanian Waste Management Regulations.</li> </ul> </li> <li>Management or the disposal of any wastewater generated during the project in accordance with Tasmanian Waste Regulations and in accordance with the requirements of Council (for discharge to storm water) or TasWater (for discharge to Sewer).</li> <li>CEMP compliance reporting to the Principal Contractor.</li> <li>Immediately reporting any unexpected contamination finds to the Environmental Consultant. This may include, but is not limited to: <ul style="list-style-type: none"> <li>Odourous soil, smelling like hydrocarbons (oils, petrol diesel etc.), methane, degraded organic matter (similar to swamps) or other identifiable chemicals</li> <li>Obviously stained soil, usually identified by non-natural colours</li> <li>Identified contaminants buried within the soil indicating previous hard waste disposal (batteries, tyres, drums etc.)</li> <li>Identification or possible identification of asbestos or asbestos containing materials (ACM)</li> </ul> </li> </ul> |
| Environmental Consultant | <p>Provide advice and technical support to the appointed Civil Contractor, including:</p> <ul style="list-style-type: none"> <li>Responding to notification of unexpected contamination finds.</li> <li>Perform additional soil assessment of ex situ soil stockpiles to determine suitability for offsite disposal if required.</li> </ul> <p>Provide advice and technical support to the Principal Contractor, including:</p> <ul style="list-style-type: none"> <li>Provision of advice to the Principal Contractor on compliance with the CEMP where necessary or when required.</li> <li>Provision of all Environmental Assessment reports to the Principal Contractor</li> </ul>   |

### 3. LEGAL AND REGULATORY REQUIREMENTS

The following environmental, legal, statutory and guideline documents need to be adhered to for all works undertaken as part of the works program. Note:

- Other requirements will apply, and these should be addressed by the Principal Contractor through their own Construction Management Plan
- Some of the documents listed below may only be partially or potentially relevant to the proposed work scope

**Table 3.1 Legal and Regulatory Requirements**

| Jurisdiction | Reference                      | Description  |

|          | Draft Model Codes of Practice | No Identified Relevant Requirements   |

#### 4. ENVIRONMENTAL MANAGEMENT PLANS

A number of environmental management plans, which include numerous controls and procedures, are presented within this section to provide guidance to the appointed Civil Works Contractor during the completion of the scope of works identified in Section 1.2:

- Excavation of approximately 189m<sup>2</sup> to a depth of 51.49m RL - Assumed by EM&C to be equivalent with Australian Height Datum (AHD)
- Backfill of excavated material, over an area of 187m<sup>2</sup> to a height of 51.49
- Offsite disposal of contaminated soil unsuitable for onsite reuse

It is incumbent upon the appointed Civil Contractor to adhere to not only the controls and procedures presented within this CEMP, but also with all relevant legal and regulatory requirements identified in Section 3 and any additional requirements, which might be supplied by Council as part of the planning approval process.

These management plans are presented to be a minimum standard to be adhered to, but are not exhaustive in their requirements. The appointed Principal Contractor is to work with the Civil Works Contractor in ensuring the goals of the plans are met, which may include the implementation of additional controls not mentioned within this document.

It should be noted that some overlap will exist with management plans. In this instance, it is important to apply the appropriate controls to manage the risks associated with each environmental hazard.

#### 4.1. ENVIRONMENTAL EMERGENCY RESPONSE MANAGEMENT PLAN

This Environmental Emergency Response Plan should be viewed as complementary to the appointed Principle Contractor's Project Health & Safety Plan and any identified Emergency Response Procedures within this plan.

Environmental incidents on the site, which would require potential emergency response would relate to a spill of a hazardous liquid or material at the site, which may contaminate soils, enter the stormwater system, exposed utility trenches and potentially impact local waterways. For spills on land, the following shall be undertaken:

- Identify source of spill and control the spill source when safe to do so.
- Identify area of spill and clear area of all personnel.
- Notify Principal Contractor of spill.
- Where possible, utilise spill kits available to protect drains/pits and absorb / contain spills and/or construct an earthen bund to contain spill using earth moving equipment available on site.
- Prevent migration of contaminants from site into stormwater or sewerage systems.
- Contractor to coordinate the pumping of liquid waste out of the containment structure and disposal to a licensed waste facility. If spilt material is non-liquid, the Civil Contractor shall coordinate the excavation and removal of the hazardous material to a secure area.
- Consultant shall assess the location of the environmental incident for potential loss to ground and advise the appointed Civil Contractor on required control or remediation measures.
- Assess the severity of the spill and potential impact on surrounding premises and if required, notify the regulator and/or fire brigade of the incidents.

**Table 4.1a Local Emergency Services**

| Service                   | Phone Number | Address                 |
|---------------------------|--------------|-------------------------|
| Police                    | 13 14 44     | Liverpool Street Hobart |
| Fire Brigade              | 000          |                         |
| Poison Information Centre | 131 126      | NSW                     |

**Table 4.1b. Regulatory Agencies**

| Agency                 | Contact             | Phone Number |
|------------------------|---------------------|--------------|
| EPA                    | Enquiries (TAS)     | 03 6233 6518 |
| Work Safe / Work Cover | Enquiries (TAS)     | 1300 555 727 |
| Stormwater & Roads     | Hobart City Council | 03 6238 2711 |
| Sewer                  | TasWater            | 13 69 92     |

#### 4.2. UNDERGROUND SERVICE PROTECTION MANAGEMENT PLAN

**Objective:**

To ensure underground services are protected not only from damage, but also the spread of contamination emanating from the works area, during the completion of Civil Works.

**Procedure:**

The Civil Contractor shall undertake a survey of all underground services and below ground assets prior to breaking ground. The process of pre-ground clearance shall be:

- Review of company construction plans;
- Dial Before You Dig (DBYD) search enquiry.
- Consultation with any utility company with a critical asset identified on the DBYD enquiry.
- Engagement of a trained service locator to identify and physically mark out located services.
- Services should be marked onsite using a combination, where appropriate, of colour coded paint and marker pegs/flags. Marker colours should be consistent with the relevant Australian Standard.
- Determine the type of service encountered (eg power, water supply, drainage etc.) and relevant details such as voltage in the case of power, composition (pvc, asbestos cement etc) and burial type (direct buried, encased etc). Note this information may not always be at hand.
- Ensure that drawings are current and arrange replacement plans should the supplied plans be out of date.
- Update safe work method statements (SWMS) where required to reflect identified services
- Consult with workers to ensure identified services have been effectively communicated to relevant staff. Ensure workers are aware of any changes to SWMS.
- When working alongside services to be retained, it may be required to positively identify underground assets prior to mechanical excavation. Positive identification of services should be conducted by non-destructive methods such as non-destructive drilling.
- Conduct a risk assessment, incorporating all reasonable controls that may be implemented to reduce the risk of contacting power lines in doing the planned task.
- Service approach distances must be adhered to. If workers are unsure what this distance is, clarity should be sought from the asset owner.

#### 4.3. CONTAMINATED SOIL/WATER MANAGEMENT PLAN

**Objective:**

To minimise the risk posed by potentially contaminated soil or water contaminants to onsite workers during the proposed development.

**Procedure:**

The Civils Works Contractor shall undertake a risk assessment/ JSA to determine the need for additional soil or groundwater testing to be undertaken during the works program to ensure workers are not exposed to an unacceptable level of risk from direct contact (which includes dermal contact, incidental oral ingestion and dust inhalation) with contamination.

The following contaminants may be present at the site in the form of contaminated soil or water, at concentrations above background levels:

- TPH (Petroleum Hydrocarbons/Fuel)
  - Due to the identified site history
- PAH (Polycyclic Aromatic Hydrocarbons)
  - Due to the identified site history, and PAHs identified during the PESA

**The previously completed PESA concluded that based on the samples taken - the assessed soil did not contain contaminants at a concentration above what is prescribed as acceptable for intrusive maintenance workers.**

As a matter of precaution, the following controls should be implemented:

- Where possible, avoid personally handling onsite soil or water, even when wearing personal protective equipment (PPE)
- Use mechanical aids to handle soil and water, for example:
  - Using trowels rather than hands to scrap small quantities of soil away
  - Use excavators for large quantities of soil
  - Use pumps to move water in preference to dunking buckets into water bodies
- Wear task specific PPE. The type will be selected by the Civil Works Contractor, however the following should be considered when selecting appropriate PPE.
  - When there is potential for hands to come into contact with onsite water (such as water that has been sitting within an excavation) waterproof/resistant gloves should be selected in preference to cut resistant gloves.
  - Chemical resistant gloves should be used when handling chemicals, rather than purely water resistant gloves
  - Safety glasses should be worn where there is a chance for splashes to workers. Face shields may be required in certain circumstances

It should be noted however that unexpected contamination finds may occur, in which case the subsequent processes should apply. Some examples of observations requiring further assessment include:

- Observation of free phase petroleum products
- Observation of leaking chemical containers within the work area
- Observation of either confirmed or suspected asbestos, or asbestos containing material (ACM)
- Spill of chemicals used onsite, causing the chemical to become exposed to the atmosphere, soil or water
- Observation of a fuel/chemical odour in soil or groundwater within the works area

Should an unexpected contamination find occur, the Environmental Consultant should be contacted immediately.

For the purpose of environmental sample collection, confined spaces are not to be entered. Where necessary samples shall be collected removed with either the aid of hand augers with extendable bars or with the assistance of an excavator or other mobile plant.

Should further assessment occur identifying that contamination is present at concentrations exceeding what is deemed to be acceptable within the NEPM as advised by the Environmental Consultant, further controls may be needed and a risk assessment should be performed to identify and document these requirements.

#### 4.4. CONTAMINATED VAPOUR/AIR MANAGEMENT PLAN

**Objective:**

To minimise the risk posed by potentially contaminated vapours/airborne contaminants to workers and surrounding properties.

**Procedure:**

The Civils Works Contractor shall undertake a risk assessment/ JSA to determine the need for atmospheric monitoring; or if the risk assessment cannot readily define a risk score rating, Health and Safety Monitoring programs may be required.

The following contaminants may be present at the site in vapour/particulate form, at concentrations above background levels:

- TPH (Petroleum Hydrocarbons/Fuel)
  - Due to the identified site history
- PAH (Polycyclic Aromatic Hydrocarbons)
  - Due to the identified site history, and PAHs identified during the PESA
- Fibrous asbestos cement fragments
  - Due to the identified site history

Other airborne contaminants may be present and should be considered by the Civil Works Contractor.

The material to be encountered during the project has contamination levels **not anticipated to cause adverse effects to human health provided that standard precautionary measures are taken in the handling of these materials**. The main pathways of contaminants entering the body are through inhalation, digestion and absorption so through implementing good work practices, the potential for contact with these is minimal.

Lower Explosive Limit (LEL) monitoring is **not required** to be undertaken as part of this project, based on the level of volatile organic compounds identified within the PESA.

It should be noted however that unexpected contamination finds may occur, in which case the subsequent processes should apply. Some examples of contamination requiring vapour assessment include:

- Observation of free phase petroleum products
- Observation of leaking chemical containers within the work area
- Observation of either confirmed or suspected asbestos, or asbestos containing material (ACM)
- Spill of chemicals used onsite, causing the chemical to become exposed to the atmosphere
- Observation of a fuel/chemical odour in soil or groundwater within the works area

Should an unexpected contamination find occur, the Environmental Consultant should be contacted immediately. The following action levels and response criteria are presented with appropriate control measures. Monitoring is to be conducted continuously in the designated work area. Action level exceedances are to be recorded.

For the purpose of environmental sample collection, confined spaces are not to be entered. Where necessary samples shall be collected removed with either the aid of hand augers with extendable bars or with the assistance of an excavator or other mobile plant.

**Table 4.4.1 Vapour Action Levels**

| Meter/ Action Limit   | Location                 | Duration      | Action   |
|---|--------------------------|---------------|--|
| LEL Meter - <5 % of lower explosive limit (LEL)                               | Ambient air in work area | Instantaneous | Continue monitoring.   |
| LEL Meter - >5 % of LEL   | Ambient air in work area | Instantaneous | Stop work; move upwind while vapours dissipate. Investigate source if safe to do so. If elevated levels remain, evacuate upwind and notify the principal contractor. |
| PID - >50ppm  | Ambient air in work area | Instantaneous | Stop Work and notify the principal contractor. Unsafe conditions may be present which need additional safety control in place before recommencing work.              |
| LEL Meter:<br><18% Oxygen<br>Carbon Monoxide 30ppm<br>Hydrogen Sulphide 10ppm | Excavation/<br>Pits      | Instantaneous | No entry into pit. Atmosphere is unsafe. If these readings are also in the ambient air in the work zone evacuate upwind and notify the principal contractor.         |

Should asbestos containing materials be identified at the site, the Environmental Consultant is to be contacted immediately. Strict adherence with regulatory guidelines will be required to ensure that no asbestos fibres are released into the atmosphere. Onsite workers are to be alerted to the presence of ACM.

Air quality monitoring for asbestos fibres will be undertaken at the boundaries of works being conducted (or as determined by the Occupational Hygienist engaged by the Environmental Consultant to conduct the monitoring) during the asbestos removal works. Monitoring locations will be dependent on the site activities and environmental conditions.

#### 4.5. DUST AND ODOUR MANAGEMENT PLAN

**Objective:**

The objective is to minimise dust and/or offensive odours originating from site activities, including wind-blown and traffic generated dust.

**Procedure:**

The Civil Works Contractor shall ensure adequate controls are in place to mitigate against the generation of airborne dust and odour. The application of control methods is to be at the discretion of the Civil Works Contractor, however should the following scenarios occur, further controls must be implemented to achieve the management plan objective:

- Significant quantities of visible dust blowing from the work area, into an area where it may be considered a nuisance
- Receipt of a complaint from a nearby land user, which may include residents, occupants or pedestrians (temporary occupiers).

Dust and odour control will be achieved by applying one or more of the following actions as deemed appropriate by the Civil Works Contractor, or mandated by the satisfaction of either of the two trigger scenarios listed above:

- Application of water to soils during excavation and stockpiling activities to suppress the emission of dust from the work zone.
- Works generating the dust emissions will cease, so that emissions of visible dust cease.
- Covering stockpiles with plastics sheets and weights if wind conditions direct dust and odour off-site, or if offensive odours presents a nuisance to site workers.
- Applying odour suppressants to stockpiles and exposed soils in excavations if offensive odours continue to migrate off-site.
- Asphalt and concrete paved areas will be maintained for as long as reasonably practical during demolition and recycling works to minimise the extent of exposed soil, facilitating the generation of dust both on and off site.
- Unsealed haul roads (if applicable) will be appropriately sealed to prevent dust generation.
- Enforce speed limits for vehicles onsite
- Equipment will be operated in a proper, efficient and correct manner which includes proper maintenance in order to minimise exhaust emissions.
- Odour emissions from the site which could adversely affect air quality or the amenity of the local area are to be monitored. Should monitoring warrant further mitigation measures, an odour misting system will be utilised for spraying of odour suppressants along the perimeter of the works zone or site perimeter to minimise potential odours associated with the works.
- Deploying odouriser by hand along the perimeter of the site to mask odours.
- The areas exposed during demolition (dust or odour generating) at any one time will be minimised wherever possible by undertakings works in a localised progressive manner over the site; and
- Weather forecasts will be checked daily to program works for the following day.
- Erection of dust screens along the perimeter of the work area, or in some instances along the site perimeter.
- Covering soils in haulage trucks prior to leaving the site to reduce dust and offensive odours impacting upon the surrounding environment and the receiving landfill facility.

If the control measures identified in this procedure are not successful in preventing offensive levels of odour or dust leaving the site, fieldworks will cease until the levels reduce to acceptable levels, or until more effective mitigation measures can be implemented.

#### 4.6. SEDIMENT AND RUNOFF MANAGEMENT PLAN

**Objective:**

To minimise soil erosion leading to sediment leaving the controlled work area through run-off.

**Procedure:**

Sediment may be generated on site by the erosion of exposed areas (such as excavations) and stockpiles. The Civil Works Contractor shall ensure migration of sediment outside of the work area is prevented.

The following mitigation measures are provided as guidance to Civil Contractor. Should any turbid water be identified to be leaving the work area, one, or a combination of these mitigation measures will be mandatory to ensure the management plan objective is achieved:

- Identification of the construction activities that could cause soil erosion or discharge sediment or water pollutants from the site.
- Identification of all storm water drains and pits on site and the assessment of required sediment controls.
- Maintain existing site boundary stormwater channels where possible to capture stormwater and silt runoff before it can enter adjacent roads, drains or off-site water bodies.
- Existing storm water infrastructure (down piping, shallow drains) will be maintained until removed as part of demolition or remediation works. Where there are former services linking to these areas that cannot be removed, they will either be capped off, or allowed to drain with appropriate sediment controls such as geo fabric, silt fences, sandbags, hay bales and silt traps (whatever is appropriate).
- Installation of silt fencing on the down gradient site boundaries where surface rainfall run-off occurs.
- Fencing is to be installed before excavation works commence and are to be routinely inspected (at a rate determined by the Civil Works Contractor) and following significant rainfall events (over 10mm rainfall within 24 hours).
- Areas of bare surfaces will be minimised during construction and stabilised as soon as practicable.
- Establishment of bunds (e.g. hay bales) where stockpiling of soil is required. Plastic sheets (minimum 200µm thickness) should be used as a base for the stockpile bund in unpaved areas to prevent contaminants leaching into the subsurface.
- Covering soil stockpiles with plastic sheets.
- Construction vehicles will use sealed roads wherever possible to prevent any loss of load, whether dust, liquid or soils.
- All vehicles tyres to be clean before exiting the site.
- Reinstatement of surface cover materials at the completion of project (either landscaping or hard surfaces) to remove areas of unsealed & uncovered ground.
  - This will depend to a large degree on the proposed finished ground surface planned.

Examples of sediment control options for kerb and gutter systems and stockpile management are presented below:

**em&c**  
ENVIRONMENTAL MANAGEMENT & CONSULTING PTY LTD

**4.7. NOISE MANAGEMENT PLAN****Objective:**

The objective is to control onsite noise as to comply with regulatory noise limits.

**Procedure:**

The Civil Works Contractor shall ensure compliance with regulatory standards along with Council noise restrictions and limited site work hours in the table below and any additional stipulated requirements of Council.

**Noise Exclusion Times within TAS**

|                             |                            |
|-----------------------------|----------------------------|
| Monday to Friday            | Before 7am and after 6pm.  |
| Saturday                    | Before 9am and after 6pm.  |
| Sunday & Statutory Holidays | Before 10am and after 6pm. |

The following work practices are recommended to be employed at the discretion of the Civil Works Contractor. Should a complaint be received, one or more of the following control measures become mandatory.

- Where possible, all site noise sources will have a maximum operating noise level of 85db (A).
- The conditions of exhaust systems on the excavators and other heavy machinery will be quantitatively assessed to ensure that they are operating efficiently.
- If generators or pumps or other noisy equipment are required for use on the site, they will be properly shrouded to reduce emitted noise levels. It is noted that some equipment will likely be required to be operated continuously.
- An Environmental Complaints Register will be maintained to ensure that any concerns of local residents and members of the public are recorded and addressed.
- Concerns over noise generation will be communicated to all site personnel and sub-contractors during site inductions.

In the event that noise complaints are received, works will cease and the appointed Civil Works Contractor or Environmental Consultant will notify the Principal Contractor. The source of the noise leading to the complaint will be investigated and methodologies reviewed to mitigate the nuisance to local residents.

#### 4.8. VIBRATION MANAGEMENT PLAN

**Objective:**

Vibration generated from site activities to be controlled so as to avoid damage to on off-site buildings and structures.

**Procedure:**

A dilapidation survey of site buildings and surrounding off-site buildings to be undertaken by the appointed Civil Works Contractor at the discretion of the Principal Contractor before commencement of civil works.

If use of vibration is necessary to complete excavation backfilling, some minor vibration to surrounding properties should be expected. The following control measures should be considered by the Civil Works Contractor:

- Monitoring of vibration at boundary monitoring points for the potential for off-site vibration to cause structural damage.
- If potential exist for vibrations to cause damage to off-site buildings, works shall cease and appointed Civil Works Contractor and Principal Contractor shall review construction methodologies to mitigate this risk to an acceptable level.
- Any works which may cause excessive vibration (such as hammering or compaction) will be restricted as much as possible against neighboring properties.

In the event that vibration/damage complaints are received, works will cease and the appointed Civil Works Contractor or Environmental Consultant will notify the Principal Contractor. The source of the vibration leading to the complaint will be investigated and methodologies reviewed to mitigate the nuisance or damage to local receptors.

#### 4.9. SOLID AND LIQUID WASTE MANAGEMENT PLAN

##### **Objectives:**

Ensure the waste management hierarchy is utilised to optimise environmental outcomes associated with waste management. All solid and liquid waste to be both managed and disposed of off-site in accordance with Tasmanian Waste Management Regulations.

##### **Procedure:**

The Civil Works Contractor must make decisions on waste management for both solid and liquid waste should they arise. In this situation, the Civil Works Contractor shall consider the hierarchy of waste control, adopting preferred methods before seeking alternative methods such as the least preferred options. The process is described below.

**The Waste Hierarchy Picture,** Source: NSW EPA, Waste Avoidance and Recovery Strategy.

Previous investigations at the site are detailed within the PESA report. The investigation identified that certain materials need to be handled, stored and in some instances disposed of in a particular manner. There is also potential for additional waste streams to be generated during the proposed work scope, and should be managed accordingly. Table 4.9.1 and 4.9.2 (on following page) detail the management options available to the Civil Works Contractor.

**Table 4.9.1 Identified Solid and Liquid Waste Summary Options**

| Waste Stream   | Waste Management Options   |
|--|--|
| Excavated soil situated below the building footprint, identified within Attached Figure 2 as the red hatched area. | <ol style="list-style-type: none"> <li>1. Avoid unrequired excavation.</li> <li>2. The material is suitable for onsite reuse within the area proposed for 'fill' within drawing number NHO_K 003 (Appendix B), which is to be a covered terrace area, and contained within a blockwork retaining wall. This area is also identified within attached Figure 2 as a purple shaded area. <ol style="list-style-type: none"> <li>a. This conclusion is made on the basis that ecological screening levels are not applicable, due to the absence of ecological receptors within this area.</li> </ol> </li> <li>3. <u>The material is unsuitable for reuse anywhere onsite where ecological screening levels apply</u>, which are unsealed areas at a depth of less than 2 meters below ground surface, which is representative of root and habitation zones of many flora and fauna species. Examples of such areas unsuitable for reuse of excavated material includes (but is not limited to): <ol style="list-style-type: none"> <li>a. Grassed areas;</li> <li>b. Garden beds; and</li> <li>c. Other unsealed areas</li> </ol> </li> <li>4. Should the above options not be possible, the material will need to be disposed of offsite to a licensed landfill. The concentration of benzo(a)pyrene within the soil would presently see this material classified as Contaminated Soil/Level 3 under the Tasmanian waste classification guidelines IB105 if removed from the site. <ol style="list-style-type: none"> <li>a. Should the excavated material be removed from site, the soil is to be handled in accordance with Tasmanian Soil Disposal Guidelines<sup>10</sup>.</li> <li>b. Such a course of action will require obtaining approvals from the Tasmanian EPA and the receiving landfill which may take approximately two – three weeks. During this time, the soil is to be stockpiled in accordance with the management plans included within this CEMP document.</li> </ol> </li> </ol> |
| Demolished Concrete footings, asphalt including minor steel reinforcement  | <ol style="list-style-type: none"> <li>1. Minimise area surface demolition to reduce volume of waste stream.</li> <li>2. If concrete is stained and odorous, consider cleaning surface to increase disposal options.</li> <li>3. Explore recycling or repurposing opportunities.</li> <li>4. Dispose to landfill if no other viable options.</li> </ol>  |

**Table 4.9.2 Potential Project Waste Stream Management**

| Waste Stream                        | Waste Management Options  |
|-------------------------------------|---|
| Asbestos Containing Material (ACMs) | <ol style="list-style-type: none"> <li>1. Asbestos Containing Material (ACMs) have not been identified at the site to the knowledge of EM&amp;C, however all demolitions project should be prepared to manage ACMs to ensure worker and public safety is maintained.</li> <li>2. Further advice on 'How to Manage and Control Asbestos in the Workplace' is provide at the Safe Work Australia web page <a href="https://www.safeworkaustralia.gov.au/system/files/documents/1810/model-cop-how-to-manage-and-control-asbestos-in-the-workplace_0.pdf">https://www.safeworkaustralia.gov.au/system/files/documents/1810/model-cop-how-to-manage-and-control-asbestos-in-the-workplace_0.pdf</a></li> <li>3. Any project generated ACM waste stream shall be managed in accordance with the Tasmanian Waste Management Regulations and in accordance with WorkSafe Tasmania guidelines.</li> </ol> |

#### 4.10. EXCAVATION DEWATERING MANAGEMENT PLAN

**Objectives:**

Ensure any water encountered in and removed from excavations is managed correctly and does not migrate from the works zone into an area where it could cause environmental harm or nuisance.

**Procedure:**

During intrusive investigations during the PESA, **no shallow groundwater was encountered, indicating the presence of groundwater accumulating within the excavation is low.** Rainfall falling directly into the excavation, or from surface water runoff may accumulate within the excavation.

Utilising the hierarchy of waste management listed in section 4.9 above, the following process should be followed:

1. Onsite reuse as dust suppression (pending suitability)
2. Off-site disposal:
  - a. Via licensed waste management contractor, or
  - b. Discharged to Sewer with the prior consent of TasWater; or
  - c. Discharged to Stormwater with the prior consent of local council.

Should offsite disposal, either to a utility or a waste contractor be required, the Civil Works Contractor must contact the Environmental Consultant to determine which disposal options may be available based on the water quality. The process in determining the applicability of disposal options may take hours to several weeks, depending on the water quality encountered. The Civil Works Contractor in consultation with the Environmental Consultant shall obtain prior approval from the receiving authority (either TasWater or local council) prior to the discharge of any water removed from excavation area.

To reduce the volume of water entering open excavation from rainfall run-off events, consideration shall be given to backfilling all open excavation as soon as possible. Where excavations cannot be quickly backfilled, efforts should be made to divert surface water run-off away or around the open excavation.

Where water is to be removed from site by a licensed waste disposal contractor, the process of removal shall be documented. This includes the details of the water disposal contractor, the volume and date of water removed, details of any completed water analysis, details of the receiving water treatment facility for licensed disposal facility. Disposal dockets shall be retained for waste tracking purposes.

#### 4.11. IMPORTED FILL MANAGEMENT PLAN

**Objectives:**

Material imported to the site for the purpose of filling excavations shall be suitable for site's existing commercial/industrial land use as defined by the National Environment Protection (Assessment of Site Contamination) Amendment Measure 2013 and should also conform to the 'fill material' standard defined within the EPA Tasmania Information Bulletin 105 '*Classification and Management of Contaminated Soil For Disposal*', Nov 2012.

**Procedure:**

To address the objective, imported fill material shall be either:

- Certified as virgin quarry source material (VQSM) and shall be free of debris or waste inclusion, and shall also be free of contamination.
- Subject to approval by the Client and Principal Contractor, Material certified by an EIANZ Certified Environmental Practitioner (CEnvP) Contaminated Site Specialist (CS) or a Contaminated Site Auditor recognised by the Director of the Tasmanian EPA, as:
  - 'Fill material' in accordance EPA Tasmania Information Bulletin 105 '*Classification and Management of Contaminated Soil For Disposal*', Nov 2012, and
  - Within the current and intended land use criteria as defined by the National Environment Protection (Assessment of Site Contamination) Amendment Measure 2013
- Records of fill material certification (in either of the scenarios listed above) shall be supplied to the Principal Contractor.

The Principal Contractor shall be notified if imported fill material does not conform to the above requirements. This material shall be deemed unsuitable for use on site and must be removed from site. Depending on the level of material contamination, there may also be a statutory requirement to notify Council and the EPA.

**4.12. EXCAVATION REINSTATEMENT MANAGEMENT PLAN*****Objectives:***

Excavation reinstatement to meet the specified requirement(s) of the Principal Contractor.

***Procedure:***

At the completion of each days work, the Civil Works Contractor shall ensure the area of exposed excavation is made safe to prevent public entering the excavation and reduce the risk of excavation face collapse, which has potential to cause injury and damage to buildings.

At the project completion the excavation is to be reinstated to the specified requirement(s) of the Principal Contractor.

#### 4.13. TRAFFIC MANAGEMENT PLAN

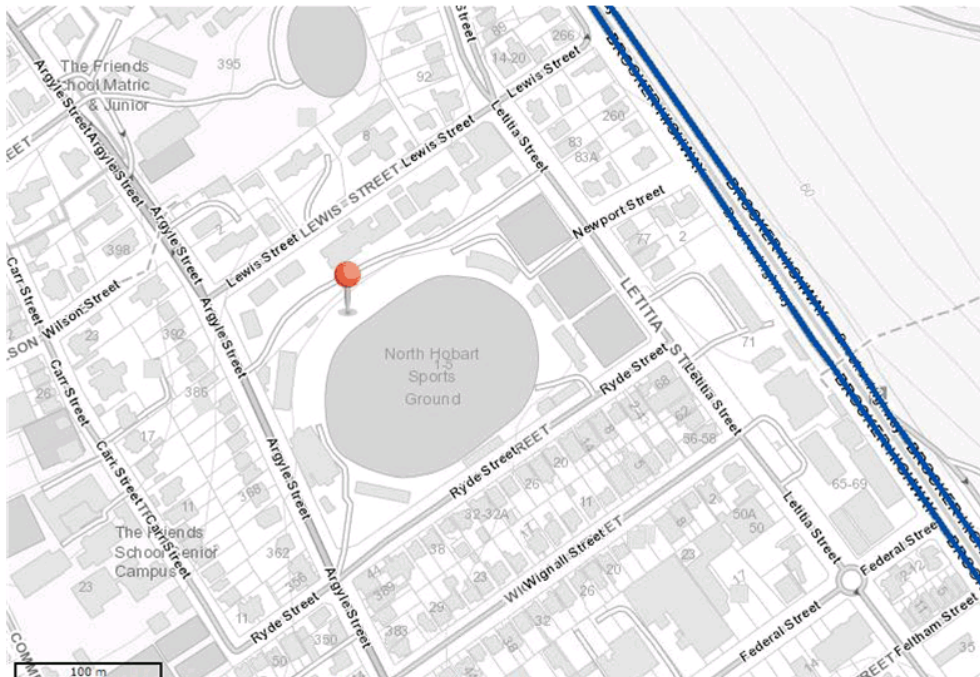

##### **Objectives:**

Minimise the impact of heavy vehicle traffic movements on local roads, surrounding residents, the community and businesses.

##### **Procedure:**

The Civil Works Contractor shall have a Traffic Control Plan in place for the movement of heavy vehicles in and out of the site in order to meet the management objective. The development of a Traffic Control Plan may indicate the requirement to engage a suitably qualified professional to develop a Traffic Management Plan for consideration by the road network owner.

Adjacent road ownership is indicated in the below image with grey representing local council ownership, dark blue representing State owned infrastructure (Source: TheList).

The following steps should be considered to mitigate the impacts that associated traffic movements will have on nearby receptors:

- All transport vehicles to have proper noise attenuation and to be maintained in good order.
- Construction traffic should comply with construction noise limits and construction times to minimise noise impact on residents.
- Queuing will be forbidden in local streets. Truck movements will be staggered to prevent queuing occurring.

- Vehicle and machinery movements during works will be restricted to designated areas within the site; these areas will change during demolition and remediation works as required by work progress.
- Heavy and light vehicles will be separated by designated onsite parking for light vehicles, and restricting the use of unnecessary light vehicles around heavy vehicle movements.
- Oversize truck movements (predominantly floats) will only occur during approved hours and will not operate during peak traffic curfews.
- Traffic will be confined to maintain site tracks and roads.
- All vehicles will be restricted to the onsite speed limit of 20 km/hr.
- Adequate off-road parking will be provided for construction vehicles and construction workforce vehicles.
- Adequate room will be provided for vehicles to manoeuvre on the site.
- All heavy vehicles on site will have fitted, and will maintained, reversing lights and reversing alarms for onsite safety.
- In accordance with Section 4.5 Dust and Odour Management Plan, vehicles transporting material to and from the construction site will be covered immediately after loading (prior to traversing public roads) to prevent windblown dust emissions and spillages.
- In the event of a spillage of materials from construction vehicles, spilled material will be removed as soon as practicable within the working day of the spillage.

The Civil Works Contractor will be responsible for ensure the above conditions are met, working in conjunction with any sub-contractors they may engage. Should a safety or environmental incident occur, the Civil Works Contractor should:

- Stop the vehicle/personnel involved in the incident immediately (or as appropriate), operate warning lights and warn other drivers to slow down;
- Clear the spill in the event of a spillage – engaging appropriate safety standards as relevant to the event;
- In the event of a complaint or failure to comply with this plan, the Civil Works Contractor will investigate the complaint promptly and initiate appropriate action to reduce impact as per guidelines in this CEMP:
  - Undertake an investigation to determine the cause;
  - Undertake monitoring if required;
  - Modify transportation practices as necessary to reduce the duration or level of impact; and
  - Report the results of the investigation the client.

#### 4.14. PLANT AND VEHICLE DECONTAMINATION

**Objectives:** Prevent soil and other contaminants being spread from the work area into the surrounding environment

**Procedure:**

The Civil Works Contractor shall be responsible for ensuring earthmoving plant, vehicles and equipment, which comes into contact with contaminated, or potentially contaminated material shall be inspected for adhered soil build up. Where necessary, dirty plant, equipment and vehicles shall be cleaned before leaving the site.

Common areas on moving plant, equipment and vehicles for the build-up of soil contaminants may be:

- Tyre treads
- Plant tracks
- Wheel hubs
- Plant attachments such as buckets or compactor heads
- Air filters
- Body panels

Vehicle egress pathways from the site shall be periodically inspected and swept free of identified contaminated soil.

#### 4.15. SITE AMENITY

**Objectives:**

Maintain the general amenity of the site and surrounding area during and following the completion of the project

**Procedure:**

The site shall be maintained by the Civil Works Contractor to an acceptable standard to both the Principal Contractor and the general public. The following guidance steps comprise the site amenity procedure:

- Maintain site perimeter fencing in good condition without holes to prevent unauthorised access to the site.
- Construct soil stockpiles away from adjoining residential/commercial properties and do not exceed the height of site fences.
- Limit the extent of excavations and duration of time they are open as far as is reasonably practicable to achieve project objectives but maintain the site amenity.
- Keep solid waste piles tidy, away from site frontages and remove the waste from the site as soon as practicable.
- Remove litter, long grass and other debris frequently.
- Implement dust, odour, noise and vibration controls described in the sections above.
- At the completion of the project ensure the site is level with no wastes remaining on-site and no odorous soils at the surface that could prolong odour nuisance to the public.

**4.16. CULTURAL HERITAGE MANAGEMENT PLAN****Objectives:**

To prevent disturbance to damage to areas of cultural or natural heritage value

**Procedure:**

The Civil Works Contractor is to determine prior to the start of intrusive works the presence of:

- Heritage overlays within the Council's planning scheme; and
- Aboriginal relics or apparent risk of impacting Aboriginal relics.

Should a search of the relevant databases indicate the presence of heritage impacts on the intended work scope, the Civil Works Contractor is to ensure:

- All personnel will attend a site induction that includes identification of heritage issues and requirements prior to the commencement of works (and/or the commencement of individual contracts).
- An exclusion zone and fencing will be installed around identified heritage items.
- If suspected indigenous or non-indigenous culturally significant material is found during works, work within 50 m must stop immediately, steps taken to prevent further disturbance, and the client notified, who will obtain expert advice from an appropriate qualified professional.
- Where culturally significant items are found on site, exclusion zones are to be established and clearly marked with tape, fencing or pegs.
- Only after written confirmation is given by the Principal Contractor in consultation with the relevant government agency, shall work recommence in the area.

In the event of non-compliance with this sub-plan the following corrective actions shall be taken:

- An investigation shall be undertaken to determine the cause;
- Work processes and practices shall be modified as necessary;
- Affected personnel shall undergo additional cultural heritage awareness training.

**4.17. FLORA AND FAUNA MANAGEMENT PLAN*****Objectives:***

To minimise the impact of the works plan to native flora and fauna, and to minimize the spread of noxious weeds.

***Procedure:***

Prior to the start of works, the Civil contractor is to determine if, at risk populations are present within the works area. Should such a population be identified, the following should be considered by the Civil Works Contractor

- Establish protected areas, to control the impact of works on at risk populations,
- Define access tracks to avoid at risk populations and mark these appropriately, and
- Implement sediment controls such as listed within Section 4.6.

Should any native fauna be found to be injured at the works site, the Civil Works Contractor is to contact a local animal rescue centre for advice.

## 5. STATEMENT OF LIMITATIONS

This report has been prepared in accordance with the scope of services described in the contract or agreement between Environmental Management & Consulting Pty Ltd (EM&C) and the Client. The report relies upon data, surveys, measurements and results taken at or under the particular times and conditions specified herein. Any findings, conclusions or recommendations only apply to the aforementioned circumstances and no greater reliance should be assumed or drawn by the Client. Furthermore, the report has been prepared solely for use by the Client and EM&C accepts no responsibility for its use by other parties. The client agrees that EM&C's report or associated correspondence will not be used or reproduced in full or in part for promotional purposes and cannot be used or relied upon in any prospectus or offering.

No warranties express or implied are made. Subject to the Scope of Work, EM&C's assessment is limited strictly to identifying typical environmental conditions associated with the subject property and does not include evaluation of the structural conditions of any buildings on the subject property or any other issues. Additionally unless otherwise stated EM&C did not conduct soil, air, wastewater or other matrix analyses including asbestos or perform contaminated sampling of any kind. Nor did EM&C investigate any waste material from the property that may have been disposed of off the site, nor related waste management practices.

The results of this assessment are based upon site inspection conducted by EM&C personnel, information from interviews with people who have knowledge of site conditions and information provided by regulatory agencies. All conclusions and recommendations regarding the property are the professional opinions of the EM&C personnel involved with the project, subject to the qualifications made above.

While normal assessments of data reliability have been made, EM&C assumes no responsibility or liability for errors in any data obtained from regulatory agencies, statements from sources outside of EM&C, or developments resulting from situations outside the scope of this project.

EM&C is not engaged in environmental auditing and /or reporting of any kind for the purpose of advertising sales promoting, or endorsement of any clients' interests, including raising investment capital, recommending investment decisions, or other publicity purposes. EM&C assumes no responsibility or liability for errors in any data obtained from regulatory agencies, statements from sources outside of EM&C, or developments resulting from situations outside the scope of this project.

Information relating to soil, groundwater, waste, air or other matrix conditions in this document is considered to be accurate at the date of issue. Surface, subsurface and atmospheric conditions can vary across a particular site or region, which cannot be wholly defined by investigation. As a result, it is unlikely that the results and estimations presented in this report will represent the extremes of conditions within the site that may exist. Subsurface conditions including contaminant concentrations can change in a limited period of time and typically have a high level of spatial heterogeneity.

From a technical perspective, there is a high degree of uncertainty associated with the assessment of subsurface, aquatic and atmospheric environments. They are prone to be heterogeneous, complex environments, in which small subsurface features or changes in geologic conditions or other environmental anomalies can have substantial impact on water, air and chemical movement.

Major uncertainties can also occur with source characterization assessment of chemical fate and transport in the environment, assessment of exposure risks and health effects, and remedial action performance. These factors make uncertainty an inherent feature of potentially impacted sites. Technical uncertainties are characteristically several orders of magnitude greater at impacted sites than for other kinds of projects.

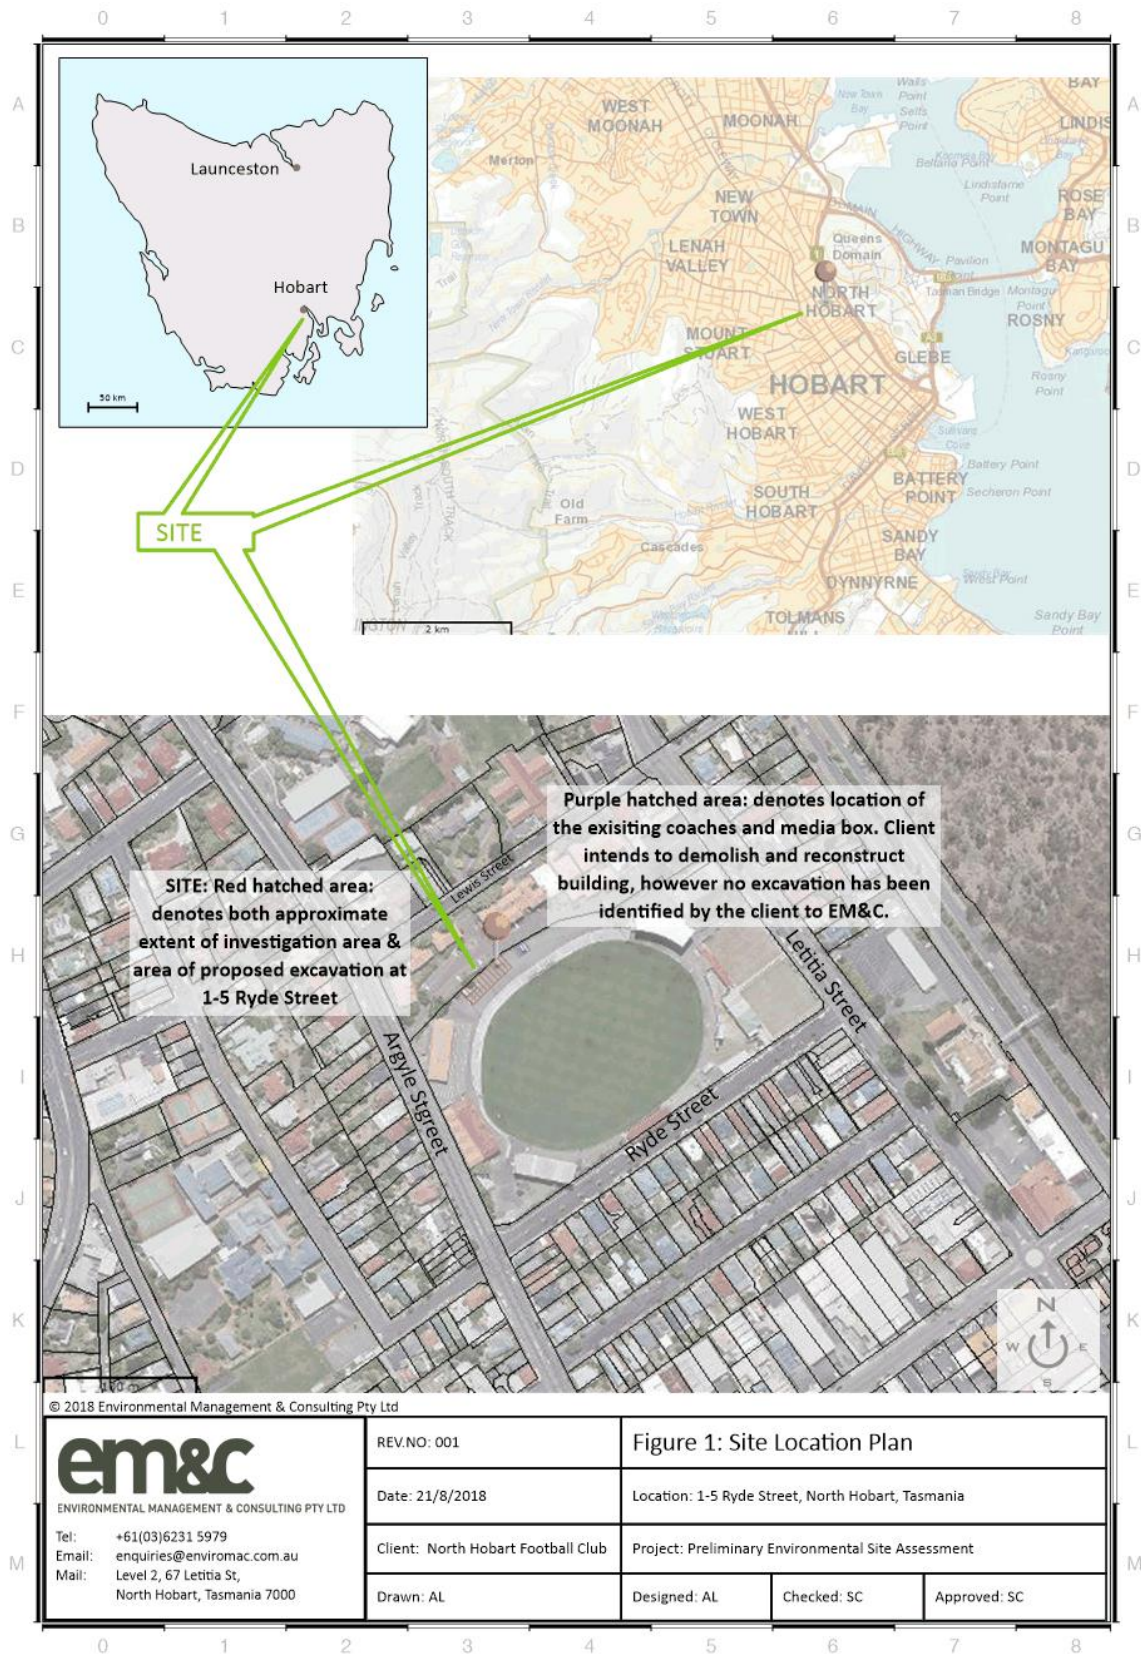

EM&C's professional opinions are based upon its professional judgment, experience, and training. These opinions are also based upon data derived from the limited testing and analysis described in this report. It is possible that additional testing and analysis might produce different results and/or different opinions or other opinions. EM&C has limited its investigation(s) to the scope agreed upon with its client. EM&C believes that its opinions are reasonably supported by the testing and analysis that has been undertaken (if any), and that those opinions have been developed according to the professional standard of care for the environmental consulting profession in this area at this time. Other opinions and interpretations may be possible. That standard of care may change and new methods and practices of exploration, testing and analysis may develop in the future, which might produce different results.

EM&C is not in the business of providing legal advice.

## 1. INTRODUCTION

This Preliminary Environmental Site Assessment (PESA) report has been prepared by Environmental Management & Consulting Pty Ltd (EM&C) to enable the Hobart City Council (HCC) to assess the proposed development for 1-5 Ryde Street, North Hobart (the 'site') against the provisions of the Potentially Contaminated Land Code (PCLC) – E2.6.2 of the Hobart Interim Planning Scheme 2015. The location of the site within the suburb of North Hobart and state of Tasmania is shown on attached Figure 1.

A copy of the architectural drawings for the proposed development have been provided to EM&C for consideration and are included for reference within Appendix A. In summary, the proposed development for a 'kiosk upgrade' is for the demolition and re-construction of a kiosk building, which will include a commercial kitchen, cool room, wet bar and outdoor partially covered terrace area. The combined excavation area is expected to be approximately 189m<sup>2</sup> and the expected infill area is expected to be approximately 187m<sup>2</sup>. An additional area within the site, the existing coaches and media box is proposed to be demolished, and replaced with a new building, retaining the original building purpose.

EM&C have designed this assessment based on the supplied cut and fill plan provided by Smeekes Drafting Pty Ltd (Drawing number NHO\_K 003, included in Appendix A). During the proposed development, the planned excavation is confined to the proposed kiosk upgrade area, to the exclusion of the coaches and media box. As a result, the soil assessment area has been confined to the kiosk area accordingly. This approach is justified based on the purpose of the Potentially Contaminated Land Code (PCLC) provided within the Hobart Interim Planning Scheme 2015 as to:

*Ensure that use or development of potentially contaminated land does not adversely impact on human health or the environment.*

The area of proposed disturbance is shown in red hatched shading on attached Figure 1 and 2 and is also the area of investigation by this PESA report.

## 2. OBJECTIVE

This PESA has been designed to address the requirements provided within the PCLC, to determine if the proposed development *works involving excavation of potentially contaminated land... [will] ...adversely impact on health and the environment.*<sup>1</sup>

The objectives of the completed PESA were to determine:

- Whether any site contamination presents a risk to workers involved in redevelopment of the site, or future users of the site, as a result of proposed excavation of the site.
- Whether any site contamination presents an environmental risk from excavation conducted during redevelopment of the site.

---

<sup>1</sup> PCLC E2.6.2, Hobart Interim Planning Scheme 2015

- Whether any specific remediation and/or protection measures are required to ensure the proposed excavation does not adversely impact human health or the environment before excavation commences.
- If offsite disposal of soil is required, classify the soil within the definitions provided within the Tasmanian EPA publication *Information Bulletin No. 105 Classification and Management of Contaminated Soil for Disposal*.

### 3. APPLICATION OF WORSCOPE TO PLANNING SCHEME

This assessment seeks to assess the condition of the site against the performance criteria supplied within the planning scheme, along with HCCs anticipated request for such an assessment.

The proposed excavation at the site triggers the application of the Potentially Contaminated Land Code. Section E2 of the HCC Interim Planning Scheme 2015 identifies where the PCLC applies:

#### E2.2.1

This Code applies to:

- (a) a use, on potentially contaminated land, that is a sensitive<sup>2</sup> use, or a use listed in a use class in Table E2.2.1 and is one of the uses specified as a qualification; or
- (b) development on potentially contaminated land.

Development is further defined within Section E2.6 to include either subdivision or excavation. The extent of excavation required to trigger the application of the PCLC through development is limited by Section E2.4.4, to only apply when the area of land disturbed by the development exceeds one square meter.

The code defines potentially contaminated land within Part E2.3.1:

...land that is, or adjoins land that the applicant or the planning authority:

- a. Knows to have been used for a potentially contaminating activity by reference to: -
  - i. A notice issued in accordance with Part 5A of the *Environmental Management and Pollution Control Act 1994*; or
  - ii. A previous permit; or
- b. Ought reasonably to have known was used for a potentially contaminating activity.

A list of potentially contaminating activities is provided within the planning scheme within Table E2.2.

The requirement for assessment was triggered by:

---

<sup>2</sup> Sensitive means a residential use or a use involving the presence of people for extended periods except in the course of their employment, such as in a caravan park, childcare centre, dwelling, hospital or school. *Hobart Interim Planning Scheme 2015 - Administration*

- The proposed area of excavation is estimated to be approximately 189m<sup>2</sup> for the construction of a new kiosk building (area of disturbance shown on attached Figures 1 and 2).
- The identification by HCC of the following potentially contaminating activities occurring on the neighboring site, located at 373 Argyle Street, North Hobart. A copy of correspondence with Hobart City Council is included within Appendix B.
  - Brick manufacture – the property was once known as ‘Brickfield’ and operated as a brick kiln from 1816 until approximately 1850<sup>3</sup>.
    - The use of kilns on the Brickfield site to fire bricks satisfies the requirements of defining the site as potentially contaminated land under the PCLC.
    - Records recovered, and included within Appendix B, from the National Library of Australia (TROVE)<sup>4</sup> have confirmed the location of the ‘Brickfield’ site. Maps dating from 1836 and 1849 indicate that both 393 Argyle Street and the Site are situated within the area identified as Brickfields.
    - Based on the recovered maps, it appears as though the Brickfields property extended from Argyle to Letitia street (west to east) and present day Wignall and Lewis Streets (south to north), meaning that the potentially contaminating activity identified by HCC not only occurred on 393 Argyle Street, but also the Site (1-5 Ryde Street).
  - Landfilling operations – the property was used as a landfill for an unspecified duration.<sup>5</sup>
    - The use of a site as a landfill satisfies the requirements of defining the site as potentially contaminated under the PCLC.
  - Dangerous goods registration forms received from the Department of Justice are included within Appendix B. The records indicate that dangerous goods were kept at the site, however the dangerous goods appear to have been restricted to bottled liquified petroleum gas, and therefore do not pose a significant risk of contamination to the site.
  - Records (included within Appendix B) received from the Tasmanian Environmental Protection Authority (EPA) have identified that they have no records relating to contamination or potentially contaminating activities being carried out on the site. The Property Information Request (PIR) carried out by the Tasmanian EPA identified:
    - Several underground storage tanks (USTs) have been registered within a 150m radius of the site. These tanks are located at:
      - 27-29 Federal Street (1963-1985)

---

<sup>3</sup> See email correspondence with HCC within Appendix B. Years of operation was communicated to EM&C over the phone following the emailed response.

<sup>4</sup> Maps provided within Appendix B.

<sup>5</sup> See correspondence with HCC contained within Appendix B.

- 31 Federal Street (1972-1986)
  - 37-41 Federal Street (1986)
  - 49a-53 Federal Street (1974-1977)
  - 396 Argyle Street, Units 1 & 2 (1972-1984)
- None of these sites share a property boundary with 1-5 Ryde Street, and therefore do not trigger the provisions of the PCLC, however, EM&C consider the property located at 396 Argyle Street may have potentially contributed to onsite contamination (if found) due to its position up topographical, and potentially hydrological gradient of the investigation area.

#### 4. ASSESSMENT FRAMEWORK

The assessment work scope and sampling and quality analysis plan was developed in accordance with *The National Environment Protection (Assessment of Site Contamination) Measure (NEPM) 1999 (2013 Amendment)*. This NEPM document has been adopted by the Tasmanian government as State Policy and can reasonably be referenced as the standard(s) of the EPA.

#### 5. SITE DESCRIPTION/SETTING

##### 5.1. Site Identification Information

## 5.2. Land Use

Table 5.2.1 Site Land Use Information

|                       |   |
|-----------------------|---|
| Current Land Use      | The property as a whole has a current 'recreational/public open space' land use however the specific investigation area would be classified as a commercial/industrial land use based on the definitions provided within Schedule B7 of the NEPM. The site contains a large grassed sports field surrounded by asphalt and concrete standing room viewing areas. There are multiple grandstands onsite. The investigation area sits within an area currently covered by asphalt and the current kiosk building. |
| Current Site Zoning   | The site is zoned '18.0 Recreation' under the Hobart Interim Planning Scheme, 2015.   |
| Surrounding Land Uses | <ul style="list-style-type: none"> <li>The property to the north, 393 Argyle street is operated as a hotel, with multi-level accommodation including ground floor apartments</li> <li>To the west across Argyle street, to the south across Ryde Street and to the east across Letitia Street lie low density residential dwellings.</li> </ul>   |
| Site Area             | The area of the site is approximately 35,070m <sup>2</sup> based on measurements provided within the Smeekes Drafting Plan NHO_K 001 (Appendix A)   |

**Figure 5.2.** Local Area Land Zoning: The blue circle shows the area within a 100m radius of the approximate investigation area within the Site. Source: [www.thelist.tas.gov.au](http://www.thelist.tas.gov.au). (August 2018). An explanation of the shading is provided within Table 5.2.2 below.

Table 5.2.2 Land Zoning Legend

| Zoning Fill   | Zoning ID | Zoning Description                                      |
|---|-----------|---|
|  | 11.0      | Inner Residential (Hobart Interim Planning Scheme 2015) |
|  | 18.0      | Recreation (Hobart Interim Planning Scheme 2015)        |
|  | 24.0      | Light Industrial (Hobart Interim Planning Scheme 2015)  |
|  | 28.0      | Utilities (Hobart Interim Planning Scheme 2015)         |
|  | 19.0      | Open Space (Hobart Interim Planning Scheme 2015)        |

### 5.3. Topography & Hydrology

Mapped regional topography is shown below in Figure 5.3 and shows the general topography in the area falls to the south east towards the Hobart CBD. The elevation of the investigation area within the site is approximately 52mAHD, based on the survey contours provided within the Smeekes Drafting Plan NHO\_K 003 (Appendix A). This value appears to be consistent with the topographic contours available from TheList (provided in Figure 5.3 below).

The nearest year-round surface water body down hydraulic gradient of the site is Hobart Rivulet, situated approximately 1.8km to the southwest of the site.

At this location, the rivulet would likely be classified as a marine ecosystem, as it is likely sitting within the tidal influence of the Derwent Estuary, located approximately 600m further downstream.

**Figure 5.3.** Local Area Topography: The blue circle shows the area within a 100m radius of the approximate investigation area within the Site. Source: [www.thelist.tas.gov.au](http://www.thelist.tas.gov.au). (August 2018).

#### 5.4. Geology

The site is situated in a shallow valley in between Jurassic aged dolerite outcrops to the northeast (The Glebe and Queens Domain) and the southwest (Knocklofty). The site is surrounded predominantly by Triassic aged sand and silt stones with mapped interbedded yellow brown or grey carbonaceous siltstone, mudstone and thin to thick-bedded quartz-rich lithic arkosic sandstone, below the investigation area.

Quaternary sediments lie to the southeast of the Site, following the low point of the valley further towards the southeast, following the path of where the Brooker Highway now lies towards the Wapping confluence with the Hobart Rivulet.

The following mapped geologies are present, and depicted within Figure 5.4 below (source: [www.thelist.tas.gov.au](http://www.thelist.tas.gov.au) accessed August 2018).

- **Q:** Undifferentiated Quaternary sediments.
- **Qa:** Alluvial gravel, sand and clay.
- **Qhmm:** Man made deposits
- **Tcbd:** Poorly sorted boulder to pebble grade deposits with boulders up to 3 m length, clasts generally dominantly of dolerite with traces to rarely dominant amounts of Upper Parmeener mudstone and other rocks and less commonly Lower Parmeener rocks.
- **Jd:** Dolerite and related rocks
- **R:** Undifferentiated Triassic fluviolacustrine sequences of sandstone, siltstone and mudstone.
- **Rv:** Undifferentiated volcanoclastic, quartz-rich lithic and quartzose sandstone, siltstone, mudstone, carbonaceous beds and coal seams.
- **Rqph:** Freshwater predominantly cross-bedded quartzose to feldspathic sandstone commonly with overturned cross-bedding, subordinate siltstone with sparse plant and vertebrate fossils (Knocklofty Formation).
- **Rvcg:** Thickly- to thinly-bedded volcanic lithic sandstone, siltstone, mudstone and coal seams, fossil plants on some horizons (Newtown Coal Measures).
- **Rvcq:** Interbedded cross-bedded white quartzose sandstone, quartz-rich lithic sandstone, siltstone and mudstone; Hobart area- upper interval with much dark grey carbonaceous mudstone, thin lenticular coal seams and fossil plants in places
- **Rvvf:** interbedded yellow brown or grey carbonaceous siltstone, mudstone and thin to thick-bedded quartz-rich lithic arkosic sandstone

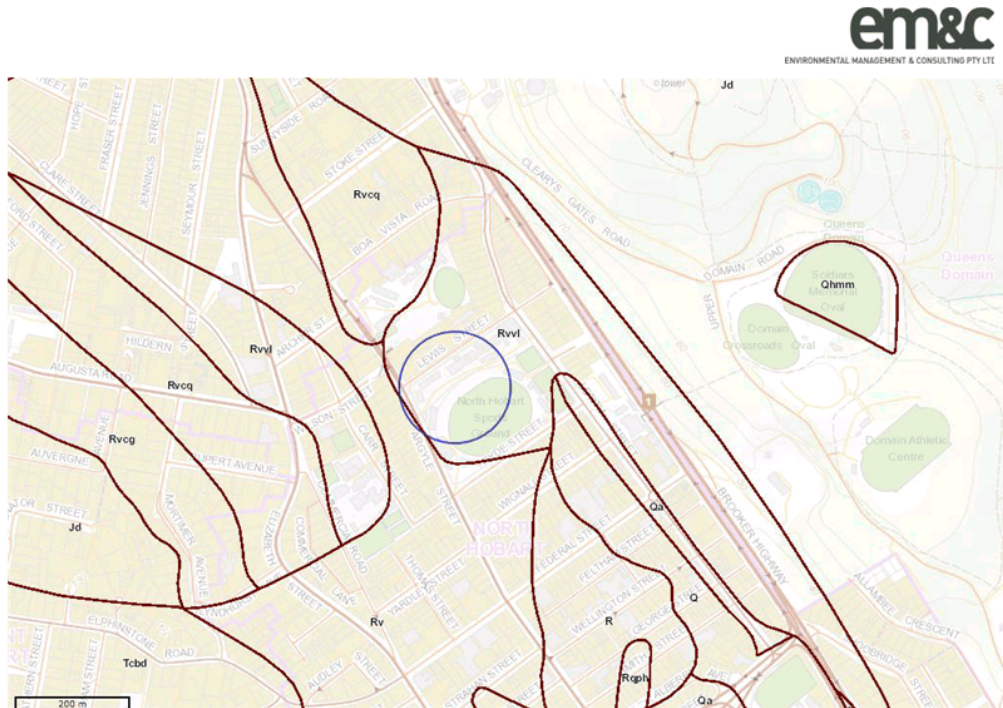

Figure 5.4 Local Area Geology, Source: [www.thelist.tas.gov.au](http://www.thelist.tas.gov.au) (August 2018)

The site's shallow geology/soil horizons were encountered and logged as follows:

|                 |   |
|-----------------|---|
| 0.0 to 0.18mBGS | Asphalt   |
| 0.18 to 0.3mBGS | Fine Crushed Rock Fill, logged as medium sandy, very coarse SAND with medium gravel |
| 0.3 to 0.6mBGS  | Silty medium SAND with clay.  |
| 0.6 to 1.4mBGS  | Very coarse sandy coarse SAND with fine gravel.                                     |

At a depth of 0.5-0.7mBGS within SB2, the soil profile appeared to be comprised of light friable charcoal fragments within a matrix of ash.

### 5.5. Hydrogeology

EM&C completed a search of Water Resources Tasmania's (WRT) Groundwater Information Access Portal (GIAP) in August 2018. This search identified no local groundwater bores within 500m of the site. A screenshot of the search is provided within Appendix F (Ref: wrt.tas.gov.au, 2018).

## 6. SAMPLING AND ANALYSIS QUALITY PLAN

This Sampling and Analysis Quality Plan (SAQP) aims to provide sufficient supporting data to determine the contamination and waste categorisation status of the site and excavated material, relative to the nominated assessment criteria. It also aims to present all data with an acceptable level of confidence. The project SAQP is summarised in the table below. The location PESA sample locations are shown on attached Figure 2, Sample Location Plan.

Table 6.0 Sampling and Analysis Quality Plan Summary

|   |   |
|---|---|
| Objective of assessment                   | <p>To assess the area identified for excavation/ground disturbance works for evidence of soil contamination, which may determine if the development will adversely impact on human health or the environment. Should such a finding be found, identify any specific remediation and/or protections measures required to be implemented before excavation commences.</p> <p>If offsite disposal of soil is required, classify the soil within the definitions provided within the Tasmanian EPA publication <i>Information Bulletin No. 105 Classification and Management of Contaminated Soil for Disposal</i>.</p>       |
| Quality Control samples to be collected   | <p>For soil media:</p> <ul style="list-style-type: none"> <li>1 duplicate per 20 samples provided to laboratory.</li> <li>1 equipment rinsate per 20 samples.</li> <li>1 laboratory prepared trip blank per day sampling.</li> </ul> <p>For Soil Vapour:</p> <ul style="list-style-type: none"> <li>1 duplicate per 20 samples provided to laboratory.</li> </ul>   |
| Media to be sampled                       | Soil and sub surface soil vapour.   |
| Analytes to be tested for primary samples | <p><b>Soil:</b> Total hydrocarbons, reported as TRH and TPH fractions, benzene, toluene, ethylbenzene, xylenes, naphthalene (BTEXN), Tasmanian IB105 regulatory suite (metals, cyanide, PCBs, OC pesticides, phenols and PAHs).</p> <p><b>Soil Vapour:</b> NEPM Suite: Total Recoverable Hydrocarbon (F1&amp;F2 Fractions), BTEXN + Vinyl Chloride, PCE, TCE, TCA, cis-1,2- Dichloroethene.</p>   |
| Number of samples                         | <p><b>Soil:</b> Five soil bores (SB1 – SB5) to be completed with laboratory analysis of 11 discrete soil samples.</p> <p>Sample density chosen to allow for in-situ soil classification for disposal at a density of &gt; 1/25m<sup>3</sup>) within shallow profile, along with sufficient samples of the soil which will be retained onsite, below the planned excavation extent of 51.49mAHD.</p> <p>Each soil bore to be screened for Volatile Organic Compounds ('VOC') as a minimum of every third of a meter.</p> <p><b>Soil Vapour:</b> Soil vapour sampled using an installed soil vapour implant SV1_0.8-1.0</p> |
| Sampling methods                          | <p><b>Soil:</b> Samples for analysis to be taken from a clean decontaminated hand auger (rinsate blanks to confirm decontamination process). Where other methods of sampling are employed to obtain a sample, the method of collection should be clearly noted along with the sample results.</p> <p><b>Soil Vapour:</b> Sample for analysis to be collected in new, sterile tedlar bags.</p>   |

|                                   |  |
|-----------------------------------|--|
| Field Screening                   | <p><b>Soil:</b> Screening for VOCs at a minimum of each metre using a photo ionisation detector (PID).</p> <p><b>Soil Vapour:</b> Screening for commonly encountered soil gases during the purging of soil vapour sample point prior to sample collection. Gases to be screened for include methane, carbon dioxide, oxygen, methane LEL, and VOCs.</p>  |
| Laboratory to be used             | <b>NATA accredited laboratory:</b> ALS Environmental   |
| Relevant Risk Assessment Criteria | <p>Environmental Management and Pollution Control Act 1994 (EMPCA)</p> <p>The National Environment Protection (Assessment of Site Contamination) Amendment Measure 2013 (NEPM). The NEPM is state policy in Tasmania for the assessment of site contamination.</p> <p><i>CRC Care (2011)</i>, Health Screening Levels for Petroleum Hydrocarbons in Soil and Groundwater. Technical Report No. 10, Part 2: Application Document.</p> <p>CRC Care (2013), Petroleum hydrocarbon vapour intrusion assessment: Australian guidance, Technical Report No.23, CRC for Contamination Assessment and Remediation of the Environment, Adelaide, Australia.</p> <p>Tasmanian EPA Information Bulletin 105 Classification and Management of Contaminated Soil for Disposal, November 2012.</p> |

## 7. ASSESSMENT CRITERIA

The adopted environmental assessment criteria are detailed in Table 7.0 below.

Table 7.0 Adopted Site Assessment Soil and Soil Vapour (where relevant) Investigation Levels

|                        | Criteria   | Land Use Scenario                           | Relevant for Assessment | Application   |
|------------------------|--|---|-------------------------|---|
| ALL SOIL & SOIL VAPOUR | Health Based Investigation Levels  |   |                         |   |
|                        | Health Investigation Levels  | HIL A                                       | No                      | Not applicable: No residential land use   |
|                        |  | HIL B                                       | No                      |   |
|                        |  | HIL C                                       | No                      | Site would broadly be construed as public open space, however the land use setting for a commercial/industrial receptor is more appropriate due to the potential exposure scenario.   |
|                        |  | HIL D                                       | Yes                     | Assessment locations have been selected to lie below the planned Kiosk building. Occupiers of this space can broadly be defined as commercial/industrial receptors  |
|                        | Health Screening Levels for Vapour Intrusion   | HSL A & HSL B                               | No                      | Not applicable: as above  |
|                        |  | HSL C                                       | No                      |   |
|                        |  | HSL D                                       | Yes                     | Assessment locations have been selected to lie below the planned Kiosk building. Occupiers of this space can broadly be defined as commercial/industrial receptors  |
|                        |  | IMW   | Yes                     | It has been identified that intrusive maintenance works could foreseeably occur at the site within the investigation area. This screening level will also be appropriate for assessing the risk posed to construction workers during the proposed development excavation. |
|                        | Health Screening Levels for Direct Contact   | HSL A                                       | No                      | Not applicable: As above. No soil within the investigation area will remain unsealed following construction.  |
|                        |  | HSL B                                       | No                      |   |
|                        |  | HSL C                                       | No                      |   |
|                        |  | HSL D                                       | No                      |   |
|                        |  | IMW   | Yes                     | It has been identified that intrusive maintenance works could foreseeably occur at the site within the investigation area. This screening level will also be appropriate for assessing the risk posed to construction workers during the proposed development excavation. |
|                        | Ecology Based Investigation Levels   |   |                         |   |
|                        | Ecological Investigation and Screening Levels  | Areas of ecological significance            | No                      | Not applicable. No identified ecological receptor within assessment area.   |
|                        |  | Urban residential and public open space     | No                      |   |
|                        |  | Commercial and industrial                   | No                      |   |
|                        | Management Limits and Aesthetic Investigation Levels                                       |   |                         |   |
|                        | Soil Management Limits for Petroleum Hydrocarbons  | Residential, parkland and public open space | No                      | Not applicable.   |
|                        |  | Commercial and industrial                   | Yes                     | Considered due to on-going commercial use.  |
|                        | Aesthetic Considerations   | All   | No                      | Not applicable.   |
| SOIL ABOVE 51.5mAHD    | Tasmanian Waste Guidelines Classification and Management of Contaminated Soil for Disposal |   |                         |   |
|                        | Controlled Waste Disposal Criteria   | -   | Yes                     | In-situ soil currently situated above 51.49mAHD has been identified for removal within Drawing NHO_K 003. To determine the suitability for offsite disposal and to categorise the waste, the soil should be assessed against the Controlled Waste Disposal Criteria.      |

## 8. ESA WORKSCOPE

The following work scope was completed to meet the assessment objective.

### 8.1.1. Soil Assessment

Mobilisation of two EM&C Environmental Consultants to site on 7 and 10 September 2018 to drill five soil bores, designated SB1 to SB5. All drilling locations are shown on attached Figure 2. The completed work scope comprised of:

- Logging of soil profile during and the field screening of soil samples collected from each completed soil bore at regular depth intervals and changes in soil type for the presence of VOCs using a photo ionisation detector (PID).
- The collection and laboratory analysis of eleven primary soil samples:
  - Screening and collection of samples at changes in soil type, areas of visible staining and diverse relative depths.
  - Of the eleven soil samples collected, six primary samples were taken from soil located above 51.49mAHD (which is proposed to be excavated), with the remaining five primary samples taken below this depth, intending to be reflective of in-situ conditions following the proposed development.
  - In order to identify hot spots, samples destined for analysis were selected based on where the level of contamination was expected to be the most significant.
  - The collection and laboratory analysis of the following field QA/QC sample:
    - One blind duplicate sample designated QCP\_7/9/18, a duplicate of SB1\_0.2-0.3.
  - Collection of samples into sterile glass jars and placement of these jars into a chilled and insulated esky.
  - Transportation of samples to a NATA-accredited laboratory for analysis of the schedule listed within the Sampling and Analysis Quality Plan (Section 6 above).
- The collection and analysis of additional QA/QA samples, an equipment rinsate blank and a trip blank soil sample.

#### 8.1.2. Sub Slab Soil Vapour Assessment

During the soil assessment stage conducted on 10 September 2018, one soil vapour sample point was installed to a depth of 0.8-1.0 meter below current ground surface. The sample point will reflect soil vapour conditions at 51.2-51.4mAHD, which will be located 0.09-0.29m below the proposed finished ground level. Sample locations are provided on attached Figure 2. The completed installation and sampling program comprised:

- Installation of one soil vapour sample point
- The purging and field monitoring of the composition of the soil gas profile including the recording of the concentration of the following compounds:
  - Methane;
  - Oxygen;
  - Carbon dioxide;
  - LEL% (methane); and
  - Volatile organic compounds.
- The collection and laboratory analysis of soil vapour from the previously installed sample point (SV1\_0.8-1.0).
  - Collection of soil vapour sample using a graduated syringe and storage of sample within a new/sterile tedlar bag.
  - The collection and laboratory analysis of the following field QA/QC sample:
    - One blind duplicate sample designated QCP\_11/9/18.
      - Upon receipt of the sample QCP\_11/9/18, the laboratory reported to EM&C that the tedlar bag had leaked during transit, making analysis not possible.
  - Transportation of samples to a NATA-accredited laboratory for analysis of the schedule listed within the Sampling and Analysis Quality Plan (Section 6 above).

## 9. RESULTS

The following section presents field observations, measurements and laboratory results. Laboratory results have been presented relative to:

- NEPM Tier 1 assessment criteria for identified potential receptors at the site.
- *Tasmanian EPA Information Bulletin 105 Classification and Management of Contaminated Soil for Disposal, November 2012* criteria for potential offsite disposal categorisation.

'Sand' has been selected conservatively as the soil texture group<sup>6</sup> most representative of the site's confining geology. Assessment drill logs are included within Appendix E.

Due to the proposed development involving the excavation of soil, EM&C have adjusted the sample depth for assessment purposes to reflect the post development sample depth when assessing against screening criteria.

### 9.1. Soil Field Observations

No detectable concentrations of VOCs were detected through the screening of collected soil samples using a PID.

### 9.2. Soil Analytical Results v Commercial Land Use Criteria

Summarised soil sample results assessing Contaminants of Potential Concern (COPC) are presented below and in attached Table 1. Laboratory certificates of analysis are included within Appendix C.

- No exceedance of the NEPM Health Investigation Levels for a 'commercial/industrial' land use (HIL D).
- No exceedance of the NEPM Health Screening Levels (HSLs) for a 'commercial/industrial' land use (HSL D).
- No exceedance of CRC CARE intrusive maintenance worker (IMW) HSLs for either direct contact or vapour intrusion were found.
- No exceedance of the NEPM Soil Management Limits for 'commercial and industrial' land use.

---

<sup>6</sup> Reference to soil texture groups as defined by United States Department of Agriculture (USDA)

### 9.3. Soil Analytical Results v TAS Soil Disposal Guidelines (IB105)

Summarised soil sample results of samples situated above the extent of the proposed excavation cutting, assessing COPCs against the Tasmanian Soil Disposal Guidelines<sup>7</sup> is provided within attached Table 2. A laboratory prepared comparative analytical report of the same samples is included within Appendix C.

- The following samples exceeded the maximum allowable total concentration for Low Level Contaminated Soil/Level 2 for benzo(a)pyrene (2.0mg/kg)
  - SB1\_0.2-0.3 (3.0mg/kg)
  - SB2\_0.2-0.3 (2.2mg/kg)
  - SB5\_0.3-0.4 (2.7mg/kg)

Based on the above exceedances of Level 2 criteria, under the Tasmanian Soil Disposal Guidelines<sup>8</sup> the soil identified for excavation and disposal can be classified as Contaminated Soil/Level 3.

### 9.4. Soil Vapour Results

Summarised soil vapour sample results assessing Contaminants of Potential Concern (COPC) are presented below and in attached Table 3. Laboratory certificates of analysis are included within Appendix C.

- No exceedance of the NEPM Health Screening Levels (HSLs) for a 'commercial/industrial' land use (HSL D) were identified.
- No exceedance of CRC CARE intrusive maintenance worker (IMW) HSLs vapour intrusion were found.

### 9.5. QA/QC Results

Field QA/QC analytical results are presented in attached Tables 4a and 4b. Copies of the NATA endorsed laboratory reports, including internal QA/QC results and chain-of-custody documentation for the primary laboratory are included within Appendix C.

The findings of the projects precision, accuracy, representativeness, comparability and completeness data quality indicators (DQIs) are summarised within this section. In addition a DQI checklist has been attached in Appendix D. Additionally, CRC CARE Checklists L and K are included within Appendix G.

#### 9.5.1. Comparability

- An appropriately experienced person - in accordance with EM&C's Assessment Procedure detailed within the SAQP outlined in Section 6, collected all samples.
- The laboratory used was NATA-accredited for the requested analytes and provided documented methods of analysis.

---

<sup>7</sup> Information Bulletin 105: Classification and Management of Contaminated Soil for Disposal (v3 2018)

<sup>8</sup> Information Bulletin 105: Classification and Management of Contaminated Soil for Disposal (v3 2018)

**9.5.2. Precision**

Assessment of quality control data revealed:

- Soil field duplicates reported COPC concentrations within the assessment relative percentage difference (RPD) criteria<sup>9</sup> for all duplicate samples taken.
- The soil vapour field duplicate of SV1\_0.8-1.0 leaked during transit to the laboratory, and therefore was not analysed.
- Non-conformity was observed within the following laboratory standards, calibration blanks and verifications. Internal Quality Control (QCI) reports are supplied within Appendix C

**9.5.3. Accuracy**

All field equipment was calibrated prior to use. See calibration certificates provided within Appendix E.

**9.5.4. Representativeness**

- All media identified in the project's SAQP in Section 6 have been sampled.
- All samples were put into containers provided by a NATA-accredited laboratory, stored in a chilled esky (soil) and transported to each laboratory within holding times. See Appendix C for laboratory sample receipt notices.
- Target analytes were not detected in trip blank or equipment rinsate blank samples.
- No inconsistencies were identified within the method of sample collection.
- No inconsistencies have been identified in laboratory methods.

**9.5.5. Completeness**

- All samples locations have been sampled in accordance with the SAQP.
- All samples were sent to each laboratory within technical holding times and with accurately completed documentation.
- EM&C considers the collected dataset sufficiently complete to be relied upon to support the assessments data quality objectives.

---

<sup>9</sup> Which is calculated based on the primary result, relative to the primary laboratory LOR

## 10. CONCLUSIONS

At the completion of the Preliminary Environmental Site Assessment (PESA), undertaken to make an assessment of the proposed development, and subject to the assessment scope and statement of limitations (Section 11), EM&C conclude that:

- The assessed level of site contamination does **not** pose an unacceptable level of risk to workers involved in redevelopment of the site, or to future users of the site, as a result of proposed excavation.
- The assessed level of site contamination does **not** pose an unacceptable level of risk to the environment from the proposed excavation, due to an absence of ecological receptors within the assessment area.
- Assessment of the material identified for excavation above 51.49mAHD has found:
  - The material is suitable for onsite reuse within the area proposed for 'fill' within drawing number NHO\_K 003, which is to be a covered terrace area, and contained within a blockwork retaining wall (Appendix A). This area is also identified within attached Figure 2 as a purple shaded area.
    - This conclusion is made on the basis that ecological screening levels are not applicable, due to the absence of ecological receptors within this area.
  - The material is unsuitable for reuse anywhere onsite where ecological screening levels apply, which are unsealed areas at a depth of less than 2 meters below ground surface, which is representative of root and habitation zones of many flora and fauna species. Examples of such areas unsuitable for reuse of excavated material includes (but is not limited to):
    - Grassed areas;
    - Garden beds; and
    - Other unsealed areas
  - The concentration of benzo(a)pyrene within the soil would presently see this material classified as Contaminated Soil/Level 3 under the Tasmanian waste classification guidelines IB105 if removed from the site.
  - Should the excavated material be removed from site, the soil is to be handled in accordance with Tasmanian Soil Disposal Guidelines<sup>10</sup>.

EM&C recommend the following remediation/protection measures are implemented before excavation commences:

- A construction and environmental management plan should be prepared to ensure the excavated soil and associated contaminants do not spread to areas where ecological screening levels are applicable.

---

<sup>10</sup> Information Bulletin 105: Classification and Management of Contaminated Soil for Disposal (v3 2018)

With reference to the Potentially Contaminated Land Code of the Hobart Interim Planning Scheme 2015, clause E2.6.2 Excavation (b), the completed preliminary environmental site assessment has established, based on the plans provided:

- The planned 'excavation **does not adversely impact on human health or the environment**'; and
- '**specific remediation and protection measures**' are required to be implemented before excavation commences'

The report conclusions are made against both the existing and proposed future land use, as identified within the drafting plans (Appendix A). Further assessment may be required if a change to a more sensitive land use is proposed or the environmental condition of other areas of the site need to be assessed.

## 11. STATEMENT OF LIMITATIONS

This report has been prepared in accordance with the scope of services described in the contract or agreement between Environmental Management & Consulting Pty Ltd (EM&C) and the Client. The report relies upon data, surveys, measurements and results taken at or under the particular times and conditions specified herein. Any findings, conclusions or recommendations only apply to the aforementioned circumstances and no greater reliance should be assumed or drawn by the Client. Furthermore, the report has been prepared solely for use by the Client and EM&C accepts no responsibility for its use by other parties. The client agrees that EM&C's report or associated correspondence will not be used or reproduced in full or in part for promotional purposes and cannot be used or relied upon in any prospectus or offering.

No warranties express or implied are made. Subject to the Scope of Work, EM&C's assessment is limited strictly to identifying typical environmental conditions associated with the subject property and does not include evaluation of the structural conditions of any buildings on the subject property or any other issues. Additionally unless otherwise stated EM&C did not conduct soil, air, wastewater or other matrix analyses including asbestos or perform contaminated sampling of any kind. Nor did EM&C investigate any waste material from the property that may have been disposed of off the site, nor related waste management practices.

The results of this assessment are based upon site inspection conducted by EM&C personnel, information from interviews with people who have knowledge of site conditions and information provided by regulatory agencies. All conclusions and recommendations regarding the property are the professional opinions of the EM&C personnel involved with the project, subject to the qualifications made above.

While normal assessments of data reliability have been made, EM&C assumes no responsibility or liability for errors in any data obtained from regulatory agencies, statements from sources outside of EM&C, or developments resulting from situations outside the scope of this project.

EM&C is not engaged in environmental auditing and/or reporting of any kind for the purpose of advertising sales promoting, or endorsement of any clients' interests, including raising investment capital, recommending investment decisions, or other publicity purposes. EM&C assumes no responsibility or liability for errors in any data obtained from regulatory agencies, statements from sources outside of EM&C, or developments resulting from situations outside the scope of this project.

Information relating to soil, groundwater, waste, air or other matrix conditions in this document is considered to be accurate at the date of issue. Surface, subsurface and atmospheric conditions can vary across a particular site or region, which cannot be wholly defined by investigation. As a result, it is unlikely that the results and estimations presented in this report will represent the extremes of conditions within the site that may exist. Subsurface conditions including contaminant concentrations can change in a limited period of time and typically have a high level of spatial heterogeneity.

From a technical perspective, there is a high degree of uncertainty associated with the assessment of subsurface, aquatic and atmospheric environments. They are prone to be heterogeneous, complex environments, in which small subsurface features or changes in geologic conditions or other environmental anomalies can have substantial impact on water, air and chemical movement.

Major uncertainties can also occur with source characterization assessment of chemical fate and transport in the environment, assessment of exposure risks and health effects, and remedial action performance. These factors make uncertainty an inherent feature of potentially impacted sites. Technical uncertainties are characteristically several orders of magnitude greater at impacted sites than for other kinds of projects.

EM&C's professional opinions are based upon its professional judgment, experience, and training. These opinions are also based upon data derived from the limited testing and analysis described in this report. It is possible that additional testing and analysis might produce different results and/or different opinions or other opinions. EM&C has limited its investigation(s) to the scope agreed upon with its client. EM&C believes that its opinions are reasonably supported by the testing and analysis that has been undertaken (if any), and that those opinions have been developed according to the professional standard of care for the environmental consulting profession in this area at this time. Other opinions and interpretations may be possible. That standard of care may change and new methods and practices of exploration, testing and analysis may develop in the future, which might produce different results.

EM&C is not in the business of providing legal advice.

**Tables Notes:**

- Assessment criteria are obtained from National Environment Protection (Assessment of Site Contamination) Amendment Measure 2013 (NEPC, 1999).
- Assessment criteria are obtained from CRC CARE Technical Report no. 10: Health screening levels for petroleum hydrocarbons in soil and groundwater (Friebel & Nadebaum 2011).
- ESL criteria have been established for protection of plant root zones and are applicable in non-arid areas for assessment of soil within the 0- 2mBGS depth range.
- Laboratory analysis of naphthalene is conducted using two separate methods, EP080: extracting sample for volatiles and EP075(SIM)B: extracting sample for semi-volatiles. The naphthalene concentration from EP080 is used for F2 calculation.
- HIL is based on the 8 carcinogenic PAHs and their TEFs (potency relative to B[a]P adopted by CME 2008 (refer Schedule B7)). The B[a]P TEQ is calculated by multiplying the concentration of each carcinogenic PAH in the sample by its B[a]P TEF and summing these products. TEQs have been calculated using half of the LOR result, where <LOR was reported.
- Sample point RLs have been estimated based on the ground surface contour plan provided within Drawing NHO\_K\_003
- sample depth is based on post development sample depth. For all samles within the zone planned for excavation, EM&C has conservatively assumed a screening depth of 0-1m with a SAND confining geology

"-" denotes analyte not tested by laboratory, or no criteria available.

Bold values are concentrations reported above laboratory limit of reporting

Highlighted values exceed nominated investigation criteria.

**Table Abbreviations**

NEPM: National Environment Protection (Assessment of Site Contamination) Amendment Measure 2013  
 CRC CARE: Cooperative Research Centre for Contamination Assessment and Remediation of the Environment  
 HSL: Health Screening Level

HIL: Health Investigation Level  
 ESL: Environmental Screening Level  
 EIL: Environmental Investigation Level  
 IMW: Intrusive Maintenance Worker  
 PID: Photo-ionisation Detection

**Tables Notes:**

1) Assessment criteria are obtained Tasmanian EPA Information Bulletin 105 Classification and Management of Contaminated Soil for Disposal, 2018

2) Laboratory analysis of naphthalene is conducted using two separate methods, EPO80: extracting sample for volatiles and EPO75(SIM)B: extracting sample for semi-volatiles. The naphthalene concentration from EPO80 is used for F2 calculation.

"-" denotes analyte not tested by laboratory, or no criteria available.

Bold values are concentrations reported above laboratory limit of reporting

Highlighted values exceed nominated investigation criteria.

**Table Notes**

1) Assessment criteria are obtained from National Environment Protection (Assessment of Site Contamination) Amendment Measure 2013 (NEPC, 1999)

2) Assessment criteria for an Intrusive Maintenance Worker (IMW) are obtained from CRC CARE Technical Report no. 10: Health screening levels for petroleum hydrocarbons in soil and groundwater (Friebel & Nadebaum 2011)

3) Sample point RLs have been estimated based on the ground surface contour plan provided within Drawing NHO\_K 003

"-" denotes analyte not tested by laboratory, or no criteria available.

Highlighted values exceed nominated investigation criteria. Bold values are concentrations reported above laboratory limit of reporting

**Tables Notes:**

1) Laboratory analysis of naphthalene is conducted using two separate methods, EP080: extracting sample for volatiles and EP075(SIM)B: extracting sample for semi-volatiles. The naphthalene concentration from EP080 is used for F2 calculation.

"-" denotes analyte not tested by laboratory, or no criteria available.

Bold values are concentrations reported above laboratory limit of reporting

Highlighted values exceed nominated investigation criteria.

**QC- Acceptance Criteria**

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable, and have been adopted for this assessment:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

**Tables Notes:**

"-" denotes analyte not tested by laboratory, or no criteria available.

1) Helium shroud concentrations are measured via a calibrated handheld helium meter, reporting results in parts per million by volume. The  $\mu\text{g}/\text{m}^3$  equivalent concentration has been calculated for comparison against the reported concentration of helium within collected soil vapour samples. The formula used for calculation is:  $\mu\text{g}/\text{m}^3 = \text{ppmv} \times \text{atomic mass} \div 24.45 \times 1000$

2) Relative concentration is the concentration of helium found within the sample/sample train relative to the concentration found within the shroud during sample collection. Where the analysed concentration of helium was below the LOR, the LOR was used for comparison calculations.

3) CRC CARE provides guidance on the concentration of helium allowable during field leak testing (10% of the shroud concentration) however the document does not provide guidance on the acceptable levels within the collected sample.

4) California EPA Department of Toxic Substances Control provided guidance in July 2015 ([https://www.dtsc.ca.gov/SiteCleanup/upload/VI\\_ActiveSoilGasAdvisory\\_FINAL.pdf](https://www.dtsc.ca.gov/SiteCleanup/upload/VI_ActiveSoilGasAdvisory_FINAL.pdf)) advising a concentration of up to 5% of the helium concentration used within the shroud is acceptable within the collected sample.

5) QA/QC provided above consist of all QA/QC samples taken since prior reporting period

6) Laboratory analysis of naphthalene is conducted using two separate methods, EP080: extracting sample for volatiles and EP075(SIM)B: extracting sample for semi-volatiles. The naphthalene concentration from EP080 is used for F2 calculation.

"-" denotes analyte not tested by laboratory, or not relevant to QA/QC performance criteria being tested.

**Bold** values are concentrations reported above laboratory limit of reporting

*Italicised* values have been calculated based on field reported readings, taken from calibrated field instruments.

**Bold** values are concentrations reported above laboratory limit of reporting

Other Information required

Application is made in response to North Hobart Football Club's development application on potentially contaminated land. EM&C are acting on our behalf to investigate our site for contamination issues arising from any potentially contaminating activities that may have occurred either on our occupied property, or the neighboring property located at 393 Argyle Street. If you could please search your records for both our site and the neighboring property that would be greatly appreciated.

TASMANIA 7002

Dear Sir or Madam:

***DANGEROUS GOODS ACT 1998***

**LICENCE TO KEEP DANGEROUS GOODS**

**NORTH HOBART FOOTBALL CLUB INC., ARGYLE STREET, NORTH HOBART**

**SITE NUMBER: 2661**

This letter is to advise you that whilst we have received payment for the renewal of your licence to keep dangerous goods for the period of 01/07/2005 to 30/06/2006, we have not received your **completed** *Section 1 of the Declaration* on the *Notice for Payment* form. Without this form your licence cannot be processed and issued.

In order to assist you, please find enclosed *Section 1 of the Declaration* on the *Notice for Payment* form. Please ensure that you **complete and return** the form to this office **no later than Monday 23<sup>rd</sup> January 2006**.

If you are keeping dangerous goods above the exemption limits specified in Schedule 3 of the *Dangerous Goods (General) Regulations 1998* without a current licence you expose yourself to possible prosecution.

If you have any queries please do not hesitate to contact Leza Wardlaw on 6233 8353.

Thank you for your co-operation.

Yours faithfully

Keven J Williams

## Important Information

Declaration must be completed and returned with payment

Please note that this Notice for Payment is not a licence to keep dangerous goods. A licence will only be issued when payment for the amount shown on this Notice is made and an "Application for a Licence" form is completed and returned to Workplace Standards Tasmania. Failure to make this payment and return the completed form will mean that the site location referenced above is not licensed and therefore in breach of Regulation 9 of the Dangerous Goods (General) Regulations 1998. Please ensure that you make prompt payment so as not to expose yourself to possible prosecution. This fee is excluded from GST by a Determination by the Treasurer under Division 81 of the GST Act 1999.

Dear Sir/Madam

***DANGEROUS GOODS ACT 1998***  
**LICENCE TO KEEP DANGEROUS GOODS**  
**NORTH HOBART FOOTBALL CLUB INC, ARGYLE STREET, NORTH HOBART**  
**SITE No. 2661**

Thank you for the payment for the renewal of *Licence to Keep Dangerous Goods* for the above referenced site location for the period 01/07/2005 to 30/06/2006.

Unfortunately you overlooked completing Section 1 of the Declaration on the *Notice for Payment* form (original enclosed). Please arrange for this Section to be completed and return to Workplace Standards as this declaration is required for the licence to be processed and issued.

Yours faithfully

Daryl Gillie

## GUIDANCE NOTES FOR TERMS USED IN THIS APPLICATION FORM

Please read these notes before completing the *Application to Keep Dangerous Goods (Keeper's Licence)* form.

|                                |   |
|--------------------------------|---|
| <b>dangerous goods</b>         | any substance prescribed as dangerous goods, or a substance or article determined by Workplace Standards Tasmania (the Competent Authority) in accordance with the Regulations, to be dangerous goods   |
| <b>depot/site</b>              | any store, warehouse, premises or land used for storing dangerous goods   |
| <b>keeper's licence</b>        | a licence issued by Workplace Standards Tasmania to a licensee to keep or store dangerous goods at a particular depot/site  |
| <b>licence</b>                 | a keeper's licence in force under the <i>Dangerous Goods (General) Regulations 1998</i>   |
| <b>licensed depot</b>          | a depot in relation to which a licence is issued under the <i>Dangerous Goods (General) Regulations 1998</i>  |
| <b>licensee</b>                | the holder of a licence to keep dangerous goods. The licensee needs to be a legal entity, that is a company, or a natural person - someone who will assume responsibility for the dangerous goods at the depot to be licensed. The licensee does not need to be the occupier of the depot. The trading name of the business should not be entered here. |
| <b>licensee number</b>         | the licence number issued by Workplace Standards Tasmania to licensees  |
| <b>occupier of a depot</b>     | means the person who occupies the depot/site such as a manager, employer, a site owner or tenant. The occupier does not have to be the same person as the licensee.   |
| <b>Regulations</b>             | <i>Dangerous Goods (General) Regulations 1998</i> . The Regulations applicable to this application form are Regulations 9(5) and 10(1).   |
| <b>site number</b>             | the site number allocated to a specific depot/site, issued by Workplace Standards Tasmania  |
| <b>street address of depot</b> | street address of the depot/site where the dangerous goods will be kept. Please do not use a post office box number for the street address of the depot.  |

*DANGEROUS GOODS ACT 1998*

Dear Sir or Madam

**RE: Site Number 2661 - Argyle Street, North Hobart**

On or about 1 June 2000, an invoice was mailed to you for the renewal of your licence to keep dangerous goods up to the period ending 31 June 2001.

Workplace Standards Tasmania (WST) has no record of the payment of the licence fee, or receipt of notification in writing of any change in circumstances at the site that would indicate that you no longer have an obligation to be licensed.

Statement of account as at 31 August 2000 was forwarded to you during the first week of September 2000, to which WST still have no record of a response.

The circumstances that may have lead to no response from you could have included:-

1. You may have sold the premises, which is still operating with the dangerous goods storage as previously licensed. However, there may have been an oversight and change of ownership/transfer of ownership may not have been forwarded to WST.
2. The dangerous goods stored no longer exceed the licensable quantities listed in Schedule 3 of the [Dangerous Goods (General) Regulations 1998] ['Regulations'].
3. You may still own the site, but no longer operate a dangerous good storage facility. If this being the case you are required to notify WST and sign the appropriate statutory declaration. The declaration must state that the storage facility has been decommissioned and the site rehabilitated in accordance with the relevant Australian Standards or Code of Practice. A statutory declaration is enclosed. It should be noted that a dangerous goods facility which is no longer in use and not abandoned in the correct manner, is deemed to be an operative dangerous goods facility and requires licensing.

Offices: 30 Gordons Hill Road, Rosny Park Mail: PO Box 56, ROSNY PARK TAS 7018 or DX 70415 Hbt

- 2 -

Should you require further information on the abandonment of a dangerous goods storage site please contact WST.

4. You are still operating a dangerous goods storage facility that is subject to the licensing requirements of the *Dangerous Goods Act 1998* and Regulations, and have failed for whatever reason to renew the licence.

At present you are operating an unlicensed dangerous goods facility. This is in breach of sub-regulation 9(5) of the regulations, and carries a maximum penalty of 10 penalty units\*.

If WST does not receive renewal of the license or advice to reasons why a license is no longer required by 16 February 2001, officers of WST will visit your premises for the purpose of collecting evidence for forwarding to the Director for Public Prosecutions, with the recommendation that legal proceedings be initiated against you.

Please note, the granting of a licence to store dangerous goods:-

1. Places upon you the responsibility to ensure the storage facility is used and operated safely and that measures to deal with an emergency are in place and operational:-  
and
2. All staff receives the required and appropriate training in the safe operation of the facility and understands the required emergency procedures.

For further advice in relation to this matter please contact Workplace Standards Tasmania on 1300 366 322.

Yours faithfully

  
S J Hyam  
DELEGATE of the COMPETENT AUTHORITY

**Subject: RE: Potentially Contaminated Land Code - 1-5 Ryde Street, North Hobart**

From: Salter, Simone - To: alex@enviromac.com.au - Date: 30 August 2018 at 8:38 AM, Attachments: image001.jpg image002.jpg

---

Hi Alex

Our records indicate the following:

1. An old brickworks site on the property adjacent to and identified the contaminant as a landfill. The address is 393 Argyle Street, North Hobart that has been identified with above, the operation was in place between 1816-1850s.
2. At 44 Ryde Street we have listed, but a note to delete from the register.

I hope this helps.

Thanks  
Simone

Simone Salter | Senior Environmental Health Officer | Environmental Health

**To:** Records Unit <RecordsUnit@hobartcity.com.au>

**Cc:** Simon Chislett <simonc@enviromac.com.au>

**Subject:** Potentially Contaminated Land Code - 1-5 Ryde Street, North Hobart

Good Afternoon HCC.

**Att: Environmental Health Unit**

EM&C have been engaged by *The North Hobart Football Club* to provide an Environmental Site Assessment to support their upcoming an application for development on potentially contaminated land.

Our client intends to construct a new building along the northern edge of the North Hobart Oval, and have identified to us that either the land intended for development, or the surrounding land may be classified as *potentially contaminated* based on the definition supplied within the HCC interim planning scheme.

The land intended for development is:

NORTH HOBART OVAL & BOWLS CLUB' - 1-5 RYDE ST NORTH HOBART TAS 7000

PID: 2003969

Title reference 119922/1

As the land has been identified by our client to us as potentially contaminated land, can you please disclose the activities carried out on the land in question, or in the instance where the potentially contaminating activity occurred on a neighbouring parcel of land, can you please give me the address/PIDs/title numbers along with the relevant activities carried out, such as the ones listed in table E2.2 within the planning scheme.

The reason I'm after this information is because the historical industries that have caused the land to become contaminated in the first place will impact the nature of our assessment, as it will guide us to what contaminants we should be testing for.

As I understand it, local councils have access to an overlay of potentially contaminated sites within the list, is it possible for me to access this overlay, or could you please provide me a screenshot of the local area with the potentially contaminating activities or affected areas of land highlighted?

Happy to have a chat with you further over the phone if you like,

Many thanks  
Al

Alex Lovibond

Mr Alex Lovibond  
Environmental Management and Consulting  
Level 2, 67 Letitia Street  
NORTH HOBART TAS 7002

Dear Mr Lovibond

**PROPERTY INFORMATION REQUEST**

**1-5 Ryde Street, North Hobart  
PID 2003969**

On 29 August 2018, the Contaminated Sites Unit received your Property Information Request relating to the land referred to above ('the Site'). A search of relevant databases and records has been undertaken.

No records relating to contamination or potentially contaminating activities on the Site were found.

EPA Tasmania received enquiries regarding redevelopment of 31 Federal Street (2016) and 393 Argyle Street (1998); Hobart City Council may have records relevant to your enquiry.

WorkSafe Tasmania [WST] records indicate that dangerous goods have been stored in underground storage tanks [UST] at several properties with 150m of the boundaries of the Site

|                            |           |          |                |
|----------------------------|-----------|----------|----------------|
| • 27-29 Federal Street     | 1963-1985 | WST File | K204           |
| • 31 Federal Street        | 1972-1986 | WST file | H631           |
| • 37-41 Federal Street     | 1986      | WST File | IS67155 vol 14 |
| • 49a-53 Federal Street    | 1974-1977 | WST File | S534           |
| • 396 Argyle St (Unit 1&2) | 1972-1984 | WST File | R286           |

No other records relating to contamination or potentially contaminating activities at the Site or adjacent properties were found.

The search of records is restricted to those held by EPA Tasmania and includes records relating to: The *Environmental Management and Pollution Control (Underground Petroleum Storage Systems) Regulations 2010*; Industrial Sites (which are or have been regulated by EPA Tasmania); historical landfills; and contamination issues reported to the Contaminated Sites Unit. In addition, the Incidents and Complaints database and records relating to the historical storage of dangerous goods (as detailed below) are searched.

WorkSafe Tasmania (1300 366 322 or [wstinfo@justice.tas.gov.au](mailto:wstinfo@justice.tas.gov.au)) may have issued dangerous goods licences and/or may hold relevant records for the Site and adjoining properties. As the storage of dangerous goods/fuels is an environmentally relevant activity, you may wish to contact them for further information.

Please note that the dangerous goods licensing records referred to by EPA Tasmania are for sites with underground storage tanks that ceased holding Dangerous Goods Licences prior to 1993. WorkSafe Tasmania hold the records for these Licences after 1993.

EPA Tasmania does not hold records on all sites that are or may be contaminated. You should consider obtaining a site history to determine the likelihood of contamination. If contamination on the Site or an adjacent property is considered likely, further assessment by a competent environmental assessment practitioner is recommended. Site assessments should be conducted in accordance with the *National Environment Protection (Assessment of Site Contamination) Measure 1999*, National Environment Protection Council (or as varied). <http://epa.tas.gov.au/regulation/contaminated-sites/identification-and-assessment-of-contaminated-land/contaminated-site-assessment>

Please note since 1 July 2015, the Director has required all environmental site assessments and reports submitted to the Contaminated Sites Unit for consideration to be prepared by a person certified as a specialist contaminated sites consultant under a scheme approved by the Director. Effective 30 June 2018, the endorsed scheme is operated by Certified Environmental Practitioners (CEnvP): Consultants certified under this scheme are approved to use the seal **CEnvP Site Contamination**. <https://www.cenvp.org>.

Further details are available at <http://epa.tas.gov.au/regulation/contaminated-sites/identification-and-assessment-of-contaminated-land/engaging-a-contaminated-site-assessment-consultant>.

As local councils are able to issue Environment Protection Notices, Environmental Infringement Notices and record complaints, you may wish to contact them for additional information that may be relevant to the site. Further, if the Site has historically been subject to a permit under the *Land Use Planning and Approvals Act 1993*, the Council would have issued the permit.

Under the *Right to Information Act 2009* (RTI Act), you are entitled to apply for any records mentioned within this letter such as reports, letters, or other relevant documents. For further information on how the RTI process works and how to request information under the RTI Act please visit the Department of Primary Industries, Parks, Water and Environment website.

If you are purchasing a property, you should consider Part 5A of the *Environmental Management and Pollution Control Act 1994* (EMPCA) which defines and specifies requirements for managing contaminated sites. If there is reason to believe the site is, or is likely to be, contaminated there are certain requirements that you must meet (e.g. notification of a likely contaminated site to the Director, EPA as outlined in section 74B of the EMPCA).

Although all due care has been taken in the preparation of this letter, the Crown gives no warranty, express or implied, as to the accuracy or completeness of the information provided. The Crown and its servants or agents accept no responsibility for any loss or damage arising from reliance upon this letter, and any person relying on the letter does so at their own risk absolutely.

As you are aware, property searches incur a charge of \$237.00. An invoice is enclosed.

If you have any queries in relation to the matters above, please contact the Contaminated Sites Unit using the details at the head of this correspondence or refer to the EPA website at [www.epa.tas.gov.au](http://www.epa.tas.gov.au) and click on 'Regulation' to locate information on Underground Fuel Tanks and Contaminated Sites.

Yours sincerely

**Bruce Napier**

**General Comments**

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please direct any queries related to sample condition / numbering / breakages to Client Services.**
- Sample Disposal - Aqueous (3 weeks), Solid (2 months) from receipt of samples.
- **Analytical work for this work order will be conducted at ALS Springvale.**
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Issue Date : 11-Sep-2018  
 Page : 2 of 3  
 Work Order : EM1814532 Amendment 0  
 Client : ENVIRONMENTAL MANAGEMENT & CONSULTING P/L

### Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- No sample container / preservation non-compliance exists.

### Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Matrix: **SOIL**

| Laboratory sample ID | Client sampling date / time | Client sample ID | SOIL - E A055-103 Moisture Content | SOIL - EP075-TAS Benzo(a)pyrene - Waste Classification (TAS) | SOIL - P-201 TAS EPA 105 (no TBT) | SOIL - P-22 (Meb) minus PSD Soil Characterisation Suite (minus PSD) | SOIL - S-04 TR-HBTEXN | SOIL - S-26 8 metals/TR-HBTEXN/PAH |

### General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
^ = This result is computed from individual analyte detections at or above the level of reporting  
ø = ALS is not NATA accredited for these tests.  
~ = Indicates an estimated value.

- EP080: Poor duplicate precision observed for sample EM1814532-004. Confirm sample heterogeneity via re-extraction and re-analysis
- pH analysis is done under non-stirring condition.
- ALS is not NATA accredited for the analysis of Exchangeable Cations on Alkaline Soils when performed under ALS Method ED006.
- (EP071): (EM1814515\_004) Poor duplicate precision observed due to sample heterogeneity. Insufficient sample remains to confirm sample heterogeneity via re-extraction and re-analysis
- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1,2,3-cd)pyrene (0.1), Dibenz(a,h)anthracene (1.0), Benzo(g,h,i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.
- ED007 and ED008: When Exchangeable Al is reported from these methods, it should be noted that Rayment & Lyons (2011) suggests Exchange Acidity by 1M KCl - Method 15G1 (ED005) is a more suitable method for the determination of exchange acidity (H<sup>+</sup> + Al<sup>3+</sup>).

#### General Comments

This guideline comparison report **only** provides evaluation of total concentration data against upper limit thresholds for the 'Fill Material', 'Low Level Contaminated Soil', and 'Contaminated Soil' categories in Table 2 of EPA Tasmania Information Bulletin No. 105.

This guideline comparison report is **NOT** a soil classification report. Classification of soils requires consideration of a number of other factors including preliminary site investigation, sampling density and statistical calculations.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

This guideline comparison report only provides evaluation data where chemical parameters specifically listed within Table 2 of EPA Tasmania Information Bulletin No. 105 are analysed by ALS using the **P-20/1 package in full**. P-20/1 package does not include Tributyltin.

Red shading is applied where the result is equal to or greater than the guideline upper limit and/or equal to or lower than the guideline lower limit. Red shading is not applied to the 'Summary of Thresholds Reached or Exceeded'.

**For the 'Summary of Thresholds Reached or Exceeded' to accurately function, all samples must be analysed and included in the 'Analytical Results' section of the following report. Please verify that all required IDs are listed and analysed.**

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

### General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot  
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
 LOR = Limit of reporting  
 RPD = Relative Percentage Difference  
 # = Indicates failed QC

### Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

### Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

### Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

### Summary of Outliers

#### Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- NO Method Blank value outliers occur.
- NO Laboratory Control outliers occur.
- Duplicate outliers exist - please see following pages for full details.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, NO surrogate recovery outliers occur.

#### Outliers : Analysis Holding Time Compliance

- NO Analysis Holding Time Outliers exist.

#### Outliers : Frequency of Quality Control Samples

- NO Quality Control Sample Frequency Outliers exist.

### Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: ✖ = Holding time breach ; ✔ = Within holding time.

### Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

| Quality Control Sample Type                             |            | Count |         | Rate (%) |          | Evaluation | Quality Control Specification  |
|---|------------|-------|---------|----------|----------|------------|--------------------------------|
| Analytical Methods                                      | Method     | QC    | Regular | Actual   | Expected |            |                                |

### Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

| Analytical Methods                                      | Method  | Matrix | Method Descriptions   |
|---|---------|--------|---|
| pH in soil using a 0.01M CaCl <sub>2</sub> extract      | EA001   | SOIL   | In house: Referenced to Rayment and Lyons (2011) 4B3 (mod.) or 4B4 (mod.) 10 g of soil is mixed with 50 mL of 0.01M CaCl <sub>2</sub> and tumbled end over end for 1 hour. pH is measured from the continuous suspension. This method is compliant with NEPM (2013) Schedule B(3)   |
| Moisture Content  | EA055   | SOIL   | In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM (2013) Schedule B(3) Section 7.1 and Table 1 (14 day holding time).  |
| Exchangeable Cations on Alkaline Soils                  | * ED006 | SOIL   | In house: Referenced to Soil Survey Test Method C5. Soluble salts are removed from the sample prior to analysis. Cations are exchanged from the sample by contact with alcoholic ammonium chloride at pH 8.5. They are then quantitated in the final solution by ICPAES and reported as meq/100g of original soil.  |
| Exchangeable Cations                                    | ED007   | SOIL   | In house: Referenced to Rayment & Lyons (2011) Method 15A1. Cations are exchanged from the sample by contact with Ammonium Chloride. They are then quantitated in the final solution by ICPAES and reported as meq/100g of original soil. This method is compliant with NEPM (2013) Schedule B(3) (Method 301)  |
| Exchangeable Cations with pre-treatment                 | ED008   | SOIL   | In house: Referenced to Rayment & Higginson (2011) Method 15A2. Soluble salts are removed from the sample prior to analysis. Cations are exchanged from the sample by contact with Ammonium Chloride. They are then quantitated in the final solution by ICPAES and reported as meq/100g of original soil. This method is compliant with NEPM (2013) Schedule B(3) (Method 301)   |
| Total Metals by ICP-AES                                 | EG005T  | SOIL   | In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM (2013) Schedule B(3)  |
| Total Mercury by FIMS                                   | EG035T  | SOIL   | In house: Referenced to AS 3550, APHA 3112 Hg - B (Flow-injection (SnCl <sub>2</sub> ) (Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl <sub>2</sub> which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (2013) Schedule B(3)  |
| Hexavalent Chromium by Alkaline Digestion and DA Finish | EG048G  | SOIL   | In house: Referenced to USEPA SW846, Method 3060A. Hexavalent chromium is extracted by alkaline digestion. The digest is determined by photometrically by automatic discrete analyser, following pH adjustment. The instrument uses colour development using dephenylcarbazine. Each run of samples is measured against a five-point calibration curve. This method is compliant with NEPM (2013) Schedule B(3)   |
| Total Cyanide by Segmented Flow Analyser                | EK026SF | SOIL   | In house: Referenced to APHA 4500-CN C / ASTM D7511. Caustic leachates of soil samples are introduced into an automated segmented flow analyser. Complex bound cyanide is decomposed in a continuously flowing stream, at a pH of 3.8, by the effect of UV light. A UV-B lamp (312 nm) and a decomposition spiral of borosilicate glass are used to filter out UV light with a wavelength of less than 290 nm thus preventing the conversion of thiocyanate into cyanide. The hydrogen cyanide present at a pH of 3.8 is separated by gas dialysis. The hydrogen cyanide is then determined photometrically, based on the reaction of cyanide with chloramine-T to form cyanogen chloride. This then reacts with 4-pyridine carboxylic acid and 1,3-dimethylbarbituric acid to give a red colour which is measured at 600 nm. This method is compliant with NEPM (2013) Schedule B(3) |

| Analytical Methods                                       | Method     | Matrix | Method Descriptions  |
|--|------------|--------|--|
| Total Fluoride   | EK040T     | SOIL   | (In-house) Total fluoride is determined by ion specific electrode (ISE) in a solution obtained after a Sodium Carbonate / Potassium Carbonate fusion dissolution.  |
| Organic Matter   | EP004      | SOIL   | In house: Referenced to AS1289.4.1.1 - 1997. Dichromate oxidation method after Walkley and Black. This method is compliant with NEPM (2013) Schedule B(3).   |
| Polychlorinated Biphenyls (PCB)                          | EP066      | SOIL   | In house: Referenced to USEPA SW 846 - 8270D Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (2013) Schedule B(3) (Method 504)   |
| Pesticides by GCMS                                       | EP068      | SOIL   | In house: Referenced to USEPA SW 846 - 8270D Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM (2013) Schedule B(3) (Method 504,505)  |
| TRH - Semivolatile Fraction                              | EP071      | SOIL   | In house: Referenced to USEPA SW 846 - 8015A Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40. Compliant with NEPM amended 2013.  |
| PAH/Phenols (SIM)  | EP075(SIM) | SOIL   | In house: Referenced to USEPA SW 846 - 8270D. Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (2013) Schedule B(3) (Method 502 and 507)  |
| Benzo(a)pyrene- Waste Classification (TAS requirements)  | EP075-TAS  | SOIL   | In house: Referenced to USEPA SW 846 - 8270D Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM (2013) Schedule B(3) (Method 502)  |
| TRH Volatiles/BTEX                                       | EP080      | SOIL   | In house: Referenced to USEPA SW 846 - 8260B. Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. Compliant with NEPM amended 2013.  |
| TRH - Semivolatile Fraction                              | EP071      | WATER  | In house: Referenced to USEPA SW 846 - 8015A The sample extract is analysed by Capillary GC/FID and quantification is by comparison against an established 5 point calibration curve of n-Alkane standards. This method is compliant with the QC requirements of NEPM (2013) Schedule B(3)   |
| TRH Volatiles/BTEX                                       | EP080      | WATER  | In house: Referenced to USEPA SW 846 - 8260B Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. Alternatively, a sample is equilibrated in a headspace vial and a portion of the headspace determined by GCMS analysis. This method is compliant with the QC requirements of NEPM (2013) Schedule B(3) |
| Preparation Methods                                      | Method     | Matrix | Method Descriptions  |
| NaOH leach for CN in Soils                               | CN-PR      | SOIL   | In house: APHA 4500 CN. Samples are extracted by end-over-end tumbling with NaOH.  |
| pH in soil using a 0.01M CaCl <sub>2</sub> extract       | EA001-PR   | SOIL   | In house: Referenced to Rayment and Higginson 4B1, 10 g of soil is mixed with 50 mL of 0.01M CaCl <sub>2</sub> and tumbled end over end for 1 hour. pH is measured from the continuous suspension. This method is compliant with NEPM (2013) Schedule B(3) (Method 103)  |
| Exchangeable Cations Preparation Method (Alkaline Soils) | ED006PR    | SOIL   | In house: Referenced to Rayment and Lyons 2011 method 15C1.  |
| Exchangeable Cations Preparation Method                  | ED007PR    | SOIL   | In house: Referenced to Rayment & Higginson (1992) method 15A1. A 1M NH <sub>4</sub> Cl extraction by end over end tumbling at a ratio of 1:20. There is no pretreatment for soluble salts. Extracts can be run by ICP for cations.  |
| Alkaline digestion for Hexavalent Chromium               | EG048PR    | SOIL   | In house: Referenced to USEPA SW846, Method 3060A.   |
| Total Fluoride   | EK040T-PR  | SOIL   | In house: Samples are fused with Sodium Carbonate / Potassium Carbonate flux.  |

| Preparation Methods  | Method   | Matrix | Method Descriptions   |
|--|----------|--------|---|
| 1:5 solid / water leach following drying at 40°C           | EN34-AD  | SOIL   | 10 g of 40°C dried soil is mixed with 50 mL of reagent grade water and tumbled end over end for 1 hour. Water soluble salts are leached from the soil by the continuous suspension. Samples are settled and the water filtered off for analysis.  |
| Hot Block Digest for metals in soils sediments and sludges | EN69     | SOIL   | In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM (2013) Schedule B(3) (Method 202) |
| Organic Matter   | EP004-PR | SOIL   | In house: Referenced to AS1289.4.1.1 - 1997. Dichromate oxidation method after Walkley and Black. This method is compliant with NEPM (2013) Schedule B(3) (Method 105)  |
| Methanolic Extraction of Soils for Purge and Trap          | ORG16    | SOIL   | In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.   |
| Tumbler Extraction of Solids                               | ORG17    | SOIL   | In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.  |
| Tumbler Extraction of Solids - VIC EPA Screen              | ORG17-EM | SOIL   | In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.  |
| Separatory Funnel Extraction of Liquids                    | ORG14    | WATER  | In house: Referenced to USEPA SW 846 - 3510B 100 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using 60mL DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM (2013) Schedule B(3) . ALS default excludes sediment which may be resident in the container.                            |
| Volatiles Water Preparation                                | ORG16-W  | WATER  | A 5 mL aliquot or 5 mL of a diluted sample is added to a 40 mL VOC vial for sparging.   |

### Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Matrix: AIR

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

**Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.**

#### Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

### General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
^ = This result is computed from individual analyte detections at or above the level of reporting  
ø = ALS is not NATA accredited for these tests.  
~ = Indicates an estimated value.

- EP101: ALS quality procedures (QWI-EN/38) permit, for organic trace analysis, that the recoveries of 20% of target compounds may lie outside of established control limits as long as these remain within acceptable ranges defined within referenced USEPA methods.
  - EP101, EP103: Results reported in µg/m³ are calculated from PPBV results based on a temperature of 25°C and atmospheric pressure of 101.3 kPa.
  - CAN-001: Results for Pressure - As Received are measured under controlled conditions using calibrated laboratory gauges. These results are expressed as an Absolute Pressure. Equivalent gauge pressures may be calculated by subtracting the Pressure - Laboratory Atmosphere taken at the time of measurement.
  - CAN-001: Results for Pressure - Gauge as Received are obtained from uncalibrated field gauges and are indicative only. These results may not precisely match calibrated gauge readings and may vary from field measurements due to changes in temperature and pressure
  - EP104: Results reported in mg/m³ are calculated from Mol% results based on a temperature of 25°C and atmospheric pressure of 101.3 kPa
  - EP104: Sample canisters were received at sub-ambient pressures and required dilution in the laboratory prior to analysis. LOR values have been adjusted accordingly

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB), Laboratory Control Spike (LCS) and Laboratory Control Spike Duplicate (DCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) and Matrix Spike Duplicate (MSD) Report; Recovery and Acceptance Limits

### Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

### General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key :      Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot  
             CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
             LOR = Limit of reporting  
             RPD = Relative Percentage Difference  
             # = Indicates failed QC

### Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

### Method Blank (MB), Laboratory Control Spike (LCS) and Laboratory Control Spike Duplicate (DCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control terms Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (DCS) refers to certified reference materials, or known interference free matrices spiked with target analytes. The purpose of these QC parameters are to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS and DCS.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

### Summary of Outliers

#### Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- NO Method Blank value outliers occur.
- NO Duplicate outliers occur.
- NO Matrix Spike outliers occur.
- Laboratory Control outliers exist - please see following pages for full details.
- For all regular sample matrices, NO surrogate recovery outliers occur.

#### Outliers : Analysis Holding Time Compliance

- NO Analysis Holding Time Outliers exist.

#### Outliers : Frequency of Quality Control Samples

- Quality Control Sample Frequency Outliers exist - please see following pages for full details.

#### Outliers : Frequency of Quality Control Samples

Matrix: AIR

| Quality Control Sample Type            | Count |         | Rate (%) |          | Quality Control Specification  |
|--|-------|---------|----------|----------|--------------------------------|
| Method                                 | QC    | Regular | Actual   | Expected |                                |
| Duplicate Control Samples (DCS)        |       |         |          |          |                                |
| Permanent Gases and Light Hydrocarbons | 1     | 11      | 9.09     | 10.00    | NEPM 2013 B3 & ALS QC Standard |
| Laboratory Control Samples (LCS)       |       |         |          |          |                                |
| Permanent Gases and Light Hydrocarbons | 1     | 11      | 9.09     | 10.00    | NEPM 2013 B3 & ALS QC Standard |

#### Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: AIR

Evaluation: ✖ = Holding time breach ; ✔ = Within holding time.

| Method  | Sample Date | Extraction / Preparation |                    |            | Analysis      |                  |            |

### Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **AIR**

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

| Quality Control Sample Type                 |           | Count |         | Rate (%) |          |            | Quality Control Specification  |
|---|-----------|-------|---------|----------|----------|------------|--------------------------------|

### **Brief Method Summaries**

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

| Analytical Methods  | Method       | Matrix | Method Descriptions  |
|---|--------------|--------|--|
| VOCs in Air by USEPA TO15r - Extended Suite               | EP101-15X    | AIR    | In house: Referenced to USEPA TO15r Volatile Organic Compounds in Air by USEPA TO15. Extended Suite  |
| VOCs in Air by USEPA TO15r - Extended Suite (mass/volume) | EP101-15X-MV | AIR    | In house: Referenced to USEPA TO15r Volatile Organic Compounds in Air by USEPA TO15. Extended Suite (Calculated Concentration)   |
| Volatile TPH/TRH in Gaseous Samples                       | EP103-PC     | AIR    | Volatile TPH/TRH by GC-MS with Preconcentration and Thermal Desorption Injection Based on USEPA TO15, MassDEP APH (Rev1 2009) and TPH/NEPM Fractions (2013)  |
| Volatile TPH/TRH in Gaseous Samples (Calc Conc)           | EP103-PC-MV  | AIR    | Volatile TPH/TRH by GC-MS with Preconcentration and Thermal Desorption Injection Based on USEPA TO15, MassDEP APH (Rev1 2009) and TPH/NEPM Fractions (2013) Calculated from ppbv results based on given Temperature and Atmospheric Pressure and mid-range molecular weights |
| Permanent Gases and Light Hydrocarbons                    | EP104        | AIR    | Hydrocarbons, Carbon Dioxide and Carbon Monoxide by GC-FID-TCD. Gases by GC-TCD In house: Referenced to ASTM D1945 applied to Gases and Light Hydrocarbons (C1-C4) using capillary GC  |
| Permanent Gases and Light Hydrocarbons (mass/volume)      | EP104-MV     | AIR    | Permanent Gases and Light Hydrocarbons - Calculated as mass/volume concentration from percentage composition and given temperature and pressure.   |

| EM1814532   | No               | No          | Yes          | Yes           | No                 | No                    | No                                | 17/09/18          |
| <b>Matrix Spike:</b> EP075B: Polynuclear Aromatic Hydrocarbons - RPD exceeds LOR based limits. Calculated RPD limits: 0%-20%. Actual result 28.3%. This reported QSC breach considered minor and not significant enough to compromise the integrity of the specific batch ID.   |                  |             |              |               |                    |                       |                                   |                   |
| <b>Lab Duplicate:</b> EP080/071: Total Petroleum Hydrocarbons - RPD exceeds LOR based limits. Calculated RPD limits: 0%-50%. Actual result 95.4%. This intra lab QAQC result was taken from a sample not part of this assessments samples, but from an external sample analysed as part of the laboratory batch. This reported QSC breach considered minor and not significant enough to compromise the integrity of the specific batch ID.   |                  |             |              |               |                    |                       |                                   |                   |
| <b>Lab Duplicate:</b> Total Recoverable Hydrocarbons - NEPM 2013 fractions - RPD exceeds LOR based limits. Calculated RPD limits: 0%-50%. Actual result 61.0%. This intra lab QAQC result was taken from a sample not part of this assessments samples, but from an external sample analysed as part of the laboratory batch. This reported QSC breach considered minor and not significant enough to compromise the integrity of the specific batch ID.  |                  |             |              |               |                    |                       |                                   |                   |
| <b>Lab Duplicate:</b> EG005T: Total Metals by ICP-AES - MS recovery not determined, background level greater than or equal to 4x spike level. This reported QSC breach considered minor and not significant enough to compromise the integrity of the specific batch ID.  |                  |             |              |               |                    |                       |                                   |                   |
| EP071 and EP071-SV: Intra Lab Quality Control Sample Frequency Outliers exist. Not enough duplicate sample bottles provided for intra lab duplicate and/or QC matrix spike testing. This result may be due to standard laboratory practice of running samples through in grouped project 'analytical lots'. This practise may involve splitting EM&Cs submitted samples over multiple analytical lots. EM&C have no control over the number of intra lab duplicates in which their samples are analysed, other than providing additional sample bottles at the specified frequency (a practise that was observed in this instance). Even when this practice is observed, the splitting of EM&Cs sample bottles over multiple 'analytical lots' may result in a non compliance, due to a lack of frequency of quality control samples provided to the laboratory. This reported QSC breach considered minor and not significant enough to compromise the integrity of specific batch ID. |                  |             |              |               |                    |                       |                                   |                   |
| EN1805943   | No               | Yes         | No           | No            | No                 | No                    | Yes                               | 17/09/18          |
| <b>Lab Control:</b> EP101: VOCs by USEPA Method TO15r - Recovery greater than upper control limit. Calculated Limits: 79-120%. Actual Result 122%. This reported QSC breach considered minor and not significant enough to compromise the integrity of the specific batch ID.   |                  |             |              |               |                    |                       |                                   |                   |
| <b>Frequency of Intra Lab QC Samples:</b> Permanent Gases and Light Hydrocarbons - Intra Lab Quality Control Sample Frequency Outliers exist. Not enough duplicate sample bags provided for intra lab duplicate and/or QC matrix spike testing. This result may be due to standard laboratory practice of running samples through in grouped project 'analytical lots'. This practise may involve splitting EM&Cs submitted samples over multiple analytical lots. EM&C have no control over the number of intra lab duplicates in which their samples are analysed, other than providing additional sample bags at the specified frequency. Even when this practice is observed, the splitting of EM&Cs samples over multiple 'analytical lots' may result in a non compliance, due to a lack  |                  |             |              |               |                    |                       |                                   |                   |
| Accuracy (a quantitative measure of the closeness of the reported data to the true value)   |                  |             |              |               |                    |                       |                                   |                   |
|   |                  |             |              |               |                    | Yes                   | No                                | NA                |
| Was the field equipment calibrated?   |                  |             |              |               |                    |                       |                                   |                   |
| Comments: See Calibration Certificates Attached in Appendix E   |                  |             |              |               |                    |                       |                                   |                   |
| Have trip, field and rinsate samples been collected?  |                  |             |              |               |                    |                       |                                   |                   |
| Comments: Rinsate and trip blanks were utilised. A field blank sample was deemed to be unrequired by EM&C.  |                  |             |              |               |                    |                       |                                   |                   |

## Data Quality Indicators Checklist

| Representativeness (the confidence expressed qualitatively that are representative of each media type present on the site under investigation) |                                     |                                     |                                     |
|--|-------------------------------------|-------------------------------------|-------------------------------------|
|  | Yes                                 | No                                  | NA                                  |
| Has the appropriate media been sampled and analysed in accordance with the SAQP?   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |
| Comments:  |                                     |                                     |                                     |
| Has all media identified in the SAQP been sampled?   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |
| Comments:  |                                     |                                     |                                     |

## LEAK TESTING

## TEST ONE - Sample Point Permeability (using syringe)

| Time  | Initial air volume in syringe | Final air volume in syringe | Test Result | Comments                           |
|-------|-------------------------------|-----------------------------|-------------|------------------------------------|
| 11.52 | 60                            | 60.0                        |             |                                    |
| 11.53 | -                             | 60.0                        | PASS        | Point induced no measurable vacuum |

## TEST TWO - Sample Train Shut-In Test (using syringe and pressure gauge)

| Time  | In-line pressure (kPa) | Test Result | Comments           |
|-------|------------------------|-------------|--------------------|
| 11.54 | -56                    | FAIL        |                    |
| 11.55 | -56                    | PASS        | Train holds vacuum |

## TEST THREE - Helium Shroud (over soil vapour bore surface seal)

| Time  | Concentration in Shroud (ppm) | Concentration in Tedlar | Test results: |
|-------|-------------------------------|-------------------------|---------------|
| 12.08 | $9 \times 10^6$               | $0 \times 10^{-4}$      | PASS          |

Result is considered a pass if the concentration within the tedlar bag is less than 10% of the concentration within the shroud.

## Sample Point Purging

| Time       | Purge Rate (mL/min) | CH <sub>4</sub> (%) | CO <sub>2</sub> (%) | O <sub>2</sub> (%) | CO (%) | H <sub>2</sub> S (%) | LEL % (Methane) | PID * (Total Hydrocarbon) ppm | App. pressure kPa |
|------------|---------------------|---------------------|---------------------|--------------------|--------|----------------------|-----------------|-------------------------------|-------------------|
| 12.15/0.10 | 300 mL/min          | 0.0                 | 0.0                 | 21.0               | NG     | NG                   | 0.0             | 0.0                           | 0.0               |

## SAMPLING

|                                       |       |  |       |
|---------------------------------------|-------|--|-------|
| Time sampling begin:                  | 12.30 | Time sampling finished:                    | 13.06 |
| Initial pressure in suma canister(s): | NA    | Final pressure in suma canister(s):        | NA    |
| Primary Sample Suma canister ID:      | NA    | Duplicate / Split Sample suma canister ID: | NA    |
| Sampling Train ID:                    | NA    | Flow restrictor flow rate:                 | NA    |

\* Denotes field meter intake was connected to tail gas of purging meter and results should be interpreted with caution

Typical flow rate through GA5000 Landfill Gas Meter is 550mL/min

% Methane recorded by GA5000 Landfill Gas Meter considered unreliable in the presence of petroleum hydrocarbons

% LEL recorded by ImpactPRO (four gas meter) considered unreliable once the % of oxygen falls below 10%.

Flow rate during purging or sampling should not exceed 8inHg (27kPa) to prevent the desorption of petroleum hydrocarbons from soil (CRC CARE TR.23)

ENVIRONMENTAL MANAGEMENT &amp; CONSULTING PTY LTD

Checklist for Reviewing  
Soil Vapour Data

| Checklist for Reviewing Soil Vapour Data   |                                       |  |                   |
|--|---------------------------------------|--|-------------------|
| Report ID  | Report Description                    |  | Report Issue Date |
| EN1805943  | Soil Vapour Sampling - September 2018 |  | 17/09/18          |
|  | Acceptable                            | Acceptable, irregularities have been noted | Not acceptable    |
| <b>Sample Collection</b>   |                                       |  |                   |
|  |                                       |  | Yes No NA         |
| Active Soil Vapour Data  |                                       |  |                   |
| Did the probe rod have an internal inert tube (SS, Teflon, nylon)?   |                                       |  |                   |
| Comments: - Teflon   |                                       |  |                   |
| Was the probe reused? If so was it adequately decontaminated between samples?  |                                       |  |                   |
| Comments: - New stainless steel sample probes were used at the time of SV point installation.  |                                       |  |                   |
| Were at least 3 dead volumes of the probe purged?  |                                       |  |                   |
| Avoid excessive purging, unless field screening (O <sub>2</sub> , CO <sub>2</sub> , PID or FID and tracer gas) conducted to demonstrate absence of atmospheric air intrusion.  |                                       |  |                   |
| Comments: See field screening logs attached.   |                                       |  |                   |
| Did the field screening of PID, O <sub>2</sub> and CO <sub>2</sub> provide results consistent with those expected based on sample location (in relation to contamination), depth and soil type? Are the results consistent with the CSM (in particular parameters that relate to and support biodegradation processes)?  |                                       |  |                   |
| Comments: Results align with expectations  |                                       |  |                   |
| Were samples collected deep enough to minimise air infiltration?   |                                       |  |                   |
| Comments: -  |                                       |  |                   |
| Did it rain shortly before the sampling event?   |                                       |  |                   |
| Soil vapour sampling should be avoided following significant precipitation   |                                       |  |                   |
| Generally there is no consensus on how much rain can fall or how much time should elapse before taking samples. It depends on soil type, ground surface cover, amount of rain and previous soil moisture content. As a general guide sampling from wells in open ground (not beneath buildings or concrete pavement) should occur 3-7 days after 25mm rainfall has occurred within an approximate 24 hour time period. |                                       |  |                   |
| Comments: -  |                                       |  |                   |
| Was a reliable method used to ensure the absence of atmospheric air leakage?   |                                       |  |                   |
| Tracer compound used to demonstrate no leakage down or around probe and at all sample train fittings.  |                                       |  |                   |
| Comments: Helium tracer compound utilised and analysed during field leak detection procedures as well as within laboratory analysed samples. See Soil Vapour QA/QC table attached to report.   |                                       |  |                   |
| Were samples collected in appropriate containers for the chemicals of concern?   |                                       |  |                   |
| Comments: -  |                                       |  |                   |
| If canisters were used, was each canister certified clean or batch tested?   |                                       |  |                   |
| Comments: Tedlar bags used   |                                       |  |                   |
| Were dedicated flow controllers & sample trains used for each sample?  |                                       |  |                   |
| It is not recommended that flow controllers and sample trains are re-used. Cleaning of these components in the field has been shown to be ineffective and the re-use of such equipment can result in cross-contamination.  |                                       |  |                   |
| Comments: New sterile syringe used   |                                       |  |                   |

Checklist for Reviewing  
Soil Vapour Data

ENVIRONMENTAL MANAGEMENT &amp; CONSULTING PTY LTD

|  | Yes | No | NA |
|--|-----|----|----|
| <b>Were vacuum pumps used in the sample collection? If so, did the flow rate decrease because of resistance to flow?</b>   |     |    |    |
| Comments: -  |     |    |    |
| <b>Were excessive vacuums required to obtain a sample?</b>   |     |    |    |
| >100 inches of H <sub>2</sub> O (~8 inches of Hg) should be avoided  |     |    |    |
| Comments: -  |     |    |    |
| <b>Were samples collected upstream of the vacuum pump (where used)?</b>  |     |    |    |
| Comments: -  |     |    |    |
| <b>Was the sample flow rate through the sorbent tubes monitored and reported throughout the sampling period?</b>   |     |    |    |
| Comments: -  |     |    |    |
| <b>For canisters, were samples stored at ambient air temperature?</b>  |     |    |    |
| Comments: -  |     |    |    |
| <b>For sorbent tubes, were these stored and shipped at &lt;4°C</b>   |     |    |    |
| Comments: -  |     |    |    |
| <b>Were samples analysed within recommended holding times?</b>   |     |    |    |
| Comments: -  |     |    |    |
| Passive Soil Vapour Programs   |     |    |    |
| <b>Were method and trip blanks analysed?</b>   |     |    |    |
| Needed to show absence of contaminants from lab or transportation back and forth to site   |     |    |    |
| Comments: -  |     |    |    |
| <b>Were samplers left in the ground for consistent and sufficient time?</b>  |     |    |    |
| Generally a few days to 2 weeks (unless in an area with very high levels being sampled).   |     |    |    |
| Collected in same sequence as deployed   |     |    |    |
| Comments: -  |     |    |    |
| <b>Were duplicate samples collected and how do they compare?</b>   |     |    |    |
| Comments: Active sampling was conducted, however, the primary quality control duplicate leaked during transit to the laboratory meaning that it could not be analysed, see DQI checklist and QA/QC report                                |     |    |    |
| <b>Are data used appropriately?</b>  |     |    |    |
| For what purpose?  |     |    |    |
| Were active soil vapour samples collected for comparison?  |     |    |    |
| How well do passive and active samples compare?  |     |    |    |
| Comments: Active samples taken, therefore this question is irrelevant.   |     |    |    |
| <b>Could measured values be from infiltration of contaminated atmospheric air or from volatiles emitted from an overlying surface (e.g., asphalt, dirty soil)? (i.e. is there a chance of cross contamination from the environment?)</b> |     |    |    |
| Comments: -  |     |    |    |
| <b>Are relative concentrations of compounds detected consistent with expectations from other media (soil vapour, groundwater, bulk soil)?</b>  |     |    |    |
| Comments: -  |     |    |    |

Checklist for Reviewing  
Soil Vapour Data

ENVIRONMENTAL MANAGEMENT &amp; CONSULTING PTY LTD

|  | Yes | No | NA |
|--|-----|----|----|
| <b>Were the passive samplers stored and shipped at &lt;4°C</b>   |     |    |    |
| Comments: -  |     |    |    |
| <b>Were samples analysed within recommended holding times?</b>   |     |    |    |
| Comments: -  |     |    |    |
| <b>Sample Analysis</b>   |     |    |    |
| The following questions should be asked when examining the analysis of any type of soil vapour sample: active or passive.  |     |    |    |
| Active and Passive Soil Vapour Samples   |     |    |    |
| <b>What methods are being used? Can they detect the target compounds at the required levels of sensitivity?</b>  |     |    |    |
| Comments: EP101 N5G and EP104  |     |    |    |
| <b>Have the method required calibration standards been analysed?</b>   |     |    |    |
| Comments: -  |     |    |    |
| <b>Are the reported values within the documented calibration range of the instrument?</b>  |     |    |    |
| Comments: -  |     |    |    |
| <b>Are any compounds co-eluting?</b>   |     |    |    |
| <p>Comments: For GCMS analyses such as that carried out on these samples (EP101 codes), there are two situations and reporting protocols that may apply for co-eluting compounds, as follows;</p> <ol style="list-style-type: none"> <li>When 2 (or more) compounds co-elute and cannot be separated on the basis of their MS fragmentation ions, they are reported together, for example in this assessment "meta- &amp; para- Xylene" co-eluted and have been reported together.</li> <li>When 2 (or more) compounds co-elute and they can be separated on the basis of their MS fragmentation ions without interference effects, they are reported as the individual components. In this situation there is generally no need to comment and data quality is not impacted</li> </ol> <p>For GC-FID or GC-TCD analyses (such as the gas analysis EP104), only the first of these two examples apply, as there is no MS spectrum. Any compounds that co-elute for this analysis will be reported together, which in this case has not occurred.</p> |     |    |    |

Checklist for Reviewing  
Soil Vapour Data

ENVIRONMENTAL MANAGEMENT &amp; CONSULTING PTY LTD

|   |   | Yes                                 | No                                  | NA                                  |
|---|---|-------------------------------------|-------------------------------------|-------------------------------------|
| <b>Have the method required QA/QC samples been analysed (blanks, duplicates, etc.)</b>  |   |                                     |                                     |                                     |
| Laboratory Duplicates   | The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%. | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |
| Method Blank  | The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination.   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |
| Laboratory Control Spike  | The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |
| Matrix Spike  | The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |
| <b>Are the calibration standards within method required holding times and traceable to a certified source?</b>  |   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |
| Comments: See attached documentation  |   |                                     |                                     |                                     |
| <b>In what units are the data reported (<math>\mu\text{g/l}</math>, <math>\mu\text{g/m}^3</math>, ppbv, ppmv)?</b>  |   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |
| Comments: $\mu\text{g/m}^3$   |   |                                     |                                     |                                     |
| <b>For high concentrations, have large dilutions been performed and do these affect the interpretation of the results? (i.e. are the detection limits above the adopted screening values for the PHCs evaluated?)</b> |   | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| Comments: -   |   |                                     |                                     |                                     |
| <u>Passive Soil Vapour Samples</u>  |   |                                     |                                     |                                     |
| In addition to the analytical issues summarised above, the following issues should be examined with passive soil vapour samples:  |   |                                     |                                     |                                     |
| <b>How are the samples desorbed from the collector?</b>   |   | <input type="checkbox"/>            | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| Comments:   |   |                                     |                                     |                                     |
| <b>Is the desorption process quantitative and does it fractionate?</b>  |   | <input type="checkbox"/>            | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| Comments:   |   |                                     |                                     |                                     |
| <b>What units are the data reported in (mass etc.)?</b>   |   | <input type="checkbox"/>            | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| Comments:   |   |                                     |                                     |                                     |

## 1. INTRODUCTION

This Preliminary Environmental Site Assessment (PESA) report has been prepared by Environmental Management & Consulting Pty Ltd (EM&C) to enable the Hobart City Council (HCC) to assess the proposed development for 1-5 Ryde Street, North Hobart (the 'site') against the provisions of the Potentially Contaminated Land Code (PCLC) – E2.6.2 of the Hobart Interim Planning Scheme 2015. The location of the site within the suburb of North Hobart and state of Tasmania is shown on attached Figure 1.

A copy of the architectural drawings for the proposed development have been provided to EM&C for consideration and are included for reference within Appendix A. In summary, the proposed development for a 'kiosk upgrade' is for the demolition and re-construction of a kiosk building, which will include a commercial kitchen, cool room, wet bar and outdoor partially covered terrace area. The combined excavation area is expected to be approximately 189m<sup>2</sup> and the expected infill area is expected to be approximately 187m<sup>2</sup>. An additional area within the site, the existing coaches and media box is proposed to be demolished, and replaced with a new building, retaining the original building purpose.

EM&C have designed this assessment based on the supplied cut and fill plan provided by Smeekes Drafting Pty Ltd (Drawing number NHO\_K 003, included in Appendix A). During the proposed development, the planned excavation is confined to the proposed kiosk upgrade area, to the exclusion of the coaches and media box. As a result, the soil assessment area has been confined to the kiosk area accordingly. This approach is justified based on the purpose of the Potentially Contaminated Land Code (PCLC) provided within the Hobart Interim Planning Scheme 2015 as to:

*Ensure that use or development of potentially contaminated land does not adversely impact on human health or the environment.*

The area of proposed disturbance is shown in red hatched shading on attached Figure 1 and 2 and is also the area of investigation by this PESA report.

## 2. OBJECTIVE

This PESA has been designed to address the requirements provided within the PCLC, to determine if the proposed development *works involving excavation of potentially contaminated land... [will] ...adversely impact on health and the environment.*<sup>1</sup>

The objectives of the completed PESA were to determine:

- Whether any site contamination presents a risk to workers involved in redevelopment of the site, or future users of the site, as a result of proposed excavation of the site.
- Whether any site contamination presents an environmental risk from excavation conducted during redevelopment of the site.

---

<sup>1</sup> PCLC E2.6.2, Hobart Interim Planning Scheme 2015

- Whether any specific remediation and/or protection measures are required to ensure the proposed excavation does not adversely impact human health or the environment before excavation commences.
- If offsite disposal of soil is required, classify the soil within the definitions provided within the Tasmanian EPA publication *Information Bulletin No. 105 Classification and Management of Contaminated Soil for Disposal*.

### 3. APPLICATION OF WORSCOPE TO PLANNING SCHEME

This assessment seeks to assess the condition of the site against the performance criteria supplied within the planning scheme, along with HCCs anticipated request for such an assessment.

The proposed excavation at the site triggers the application of the Potentially Contaminated Land Code. Section E2 of the HCC Interim Planning Scheme 2015 identifies where the PCLC applies:

#### E2.2.1

This Code applies to:

- (a) a use, on potentially contaminated land, that is a sensitive<sup>2</sup> use, or a use listed in a use class in Table E2.2.1 and is one of the uses specified as a qualification; or
- (b) development on potentially contaminated land.

Development is further defined within Section E2.6 to include either subdivision or excavation. The extent of excavation required to trigger the application of the PCLC through development is limited by Section E2.4.4, to only apply when the area of land disturbed by the development exceeds one square meter.

The code defines potentially contaminated land within Part E2.3.1:

...land that is, or adjoins land that the applicant or the planning authority:

- a. Knows to have been used for a potentially contaminating activity by reference to: -
  - i. A notice issued in accordance with Part 5A of the *Environmental Management and Pollution Control Act 1994*; or
  - ii. A previous permit; or
- b. Ought reasonably to have known was used for a potentially contaminating activity.

A list of potentially contaminating activities is provided within the planning scheme within Table E2.2.

The requirement for assessment was triggered by:

---

<sup>2</sup> Sensitive means a residential use or a use involving the presence of people for extended periods except in the course of their employment, such as in a caravan park, childcare centre, dwelling, hospital or school. *Hobart Interim Planning Scheme 2015 - Administration*

- The proposed area of excavation is estimated to be approximately 189m<sup>2</sup> for the construction of a new kiosk building (area of disturbance shown on attached Figures 1 and 2).
- The identification by HCC of the following potentially contaminating activities occurring on the neighboring site, located at 373 Argyle Street, North Hobart. A copy of correspondence with Hobart City Council is included within Appendix B.
  - Brick manufacture – the property was once known as ‘Brickfield’ and operated as a brick kiln from 1816 until approximately 1850<sup>3</sup>.
    - The use of kilns on the Brickfield site to fire bricks satisfies the requirements of defining the site as potentially contaminated land under the PCLC.
    - Records recovered, and included within Appendix B, from the National Library of Australia (TROVE)<sup>4</sup> have confirmed the location of the ‘Brickfield’ site. Maps dating from 1836 and 1849 indicate that both 393 Argyle Street and the Site are situated within the area identified as Brickfields.
    - Based on the recovered maps, it appears as though the Brickfields property extended from Argyle to Letitia street (west to east) and present day Wignall and Lewis Streets (south to north), meaning that the potentially contaminating activity identified by HCC not only occurred on 393 Argyle Street, but also the Site (1-5 Ryde Street).
  - Landfilling operations – the property was used as a landfill for an unspecified duration.<sup>5</sup>
    - The use of a site as a landfill satisfies the requirements of defining the site as potentially contaminated under the PCLC.
  - Dangerous goods registration forms received from the Department of Justice are included within Appendix B. The records indicate that dangerous goods were kept at the site, however the dangerous goods appear to have been restricted to bottled liquified petroleum gas, and therefore do not pose a significant risk of contamination to the site.
  - Records (included within Appendix B) received from the Tasmanian Environmental Protection Authority (EPA) have identified that they have no records relating to contamination or potentially contaminating activities being carried out on the site. The Property Information Request (PIR) carried out by the Tasmanian EPA identified:
    - Several underground storage tanks (USTs) have been registered within a 150m radius of the site. These tanks are located at:
      - 27-29 Federal Street (1963-1985)

---

<sup>3</sup> See email correspondence with HCC within Appendix B. Years of operation was communicated to EM&C over the phone following the emailed response.

<sup>4</sup> Maps provided within Appendix B.

<sup>5</sup> See correspondence with HCC contained within Appendix B.

- 31 Federal Street (1972-1986)
  - 37-41 Federal Street (1986)
  - 49a-53 Federal Street (1974-1977)
  - 396 Argyle Street, Units 1 & 2 (1972-1984)
- None of these sites share a property boundary with 1-5 Ryde Street, and therefore do not trigger the provisions of the PCLC, however, EM&C consider the property located at 396 Argyle Street may have potentially contributed to onsite contamination (if found) due to its position up topographical, and potentially hydrological gradient of the investigation area.

#### 4. ASSESSMENT FRAMEWORK

The assessment work scope and sampling and quality analysis plan was developed in accordance with *The National Environment Protection (Assessment of Site Contamination) Measure (NEPM) 1999 (2013 Amendment)*. This NEPM document has been adopted by the Tasmanian government as State Policy and can reasonably be referenced as the standard(s) of the EPA.

#### 5. SITE DESCRIPTION/SETTING

##### 5.1. Site Identification Information

## 5.2. Land Use

Table 5.2.1 Site Land Use Information

|                       |   |
|-----------------------|---|
| Current Land Use      | The property as a whole has a current 'recreational/public open space' land use however the specific investigation area would be classified as a commercial/industrial land use based on the definitions provided within Schedule B7 of the NEPM. The site contains a large grassed sports field surrounded by asphalt and concrete standing room viewing areas. There are multiple grandstands onsite. The investigation area sits within an area currently covered by asphalt and the current kiosk building. |
| Current Site Zoning   | The site is zoned '18.0 Recreation' under the Hobart Interim Planning Scheme, 2015.   |
| Surrounding Land Uses | <ul style="list-style-type: none"> <li>The property to the north, 393 Argyle street is operated as a hotel, with multi-level accommodation including ground floor apartments</li> <li>To the west across Argyle street, to the south across Ryde Street and to the east across Letitia Street lie low density residential dwellings.</li> </ul>   |
| Site Area             | The area of the site is approximately 35,070m <sup>2</sup> based on measurements provided within the Smeekes Drafting Plan NHO_K 001 (Appendix A)   |

**Figure 5.2.** Local Area Land Zoning: The blue circle shows the area within a 100m radius of the approximate investigation area within the Site. Source: [www.thelist.tas.gov.au](http://www.thelist.tas.gov.au). (August 2018). An explanation of the shading is provided within Table 5.2.2 below.

Table 5.2.2 Land Zoning Legend

| Zoning Fill   | Zoning ID | Zoning Description                                      |
|---|-----------|---|
|  | 11.0      | Inner Residential (Hobart Interim Planning Scheme 2015) |
|  | 18.0      | Recreation (Hobart Interim Planning Scheme 2015)        |
|  | 24.0      | Light Industrial (Hobart Interim Planning Scheme 2015)  |
|  | 28.0      | Utilities (Hobart Interim Planning Scheme 2015)         |
|  | 19.0      | Open Space (Hobart Interim Planning Scheme 2015)        |

### 5.3. Topography & Hydrology

Mapped regional topography is shown below in Figure 5.3 and shows the general topography in the area falls to the south east towards the Hobart CBD. The elevation of the investigation area within the site is approximately 52mAHD, based on the survey contours provided within the Smeekes Drafting Plan NHO\_K 003 (Appendix A). This value appears to be consistent with the topographic contours available from TheList (provided in Figure 5.3 below).

The nearest year-round surface water body down hydraulic gradient of the site is Hobart Rivulet, situated approximately 1.8km to the southwest of the site.

At this location, the rivulet would likely be classified as a marine ecosystem, as it is likely sitting within the tidal influence of the Derwent Estuary, located approximately 600m further downstream.

**Figure 5.3.** Local Area Topography: The blue circle shows the area within a 100m radius of the approximate investigation area within the Site. Source: [www.thelist.tas.gov.au](http://www.thelist.tas.gov.au). (August 2018).

#### 5.4. Geology

The site is situated in a shallow valley in between Jurassic aged dolerite outcrops to the northeast (The Glebe and Queens Domain) and the southwest (Knocklofty). The site is surrounded predominantly by Triassic aged sand and silt stones with mapped interbedded yellow brown or grey carbonaceous siltstone, mudstone and thin to thick-bedded quartz-rich lithic arkosic sandstone, below the investigation area.

Quaternary sediments lie to the southeast of the Site, following the low point of the valley further towards the southeast, following the path of where the Brooker Highway now lies towards the Wapping confluence with the Hobart Rivulet.

The following mapped geologies are present, and depicted within Figure 5.4 below (source: [www.thelist.tas.gov.au](http://www.thelist.tas.gov.au) accessed August 2018).

- **Q:** Undifferentiated Quaternary sediments.
- **Qa:** Alluvial gravel, sand and clay.
- **Qhmm:** Man made deposits
- **Tcbd:** Poorly sorted boulder to pebble grade deposits with boulders up to 3 m length, clasts generally dominantly of dolerite with traces to rarely dominant amounts of Upper Parmeener mudstone and other rocks and less commonly Lower Parmeener rocks.
- **Jd:** Dolerite and related rocks
- **R:** Undifferentiated Triassic fluviolacustrine sequences of sandstone, siltstone and mudstone.
- **Rv:** Undifferentiated volcanoclastic, quartz-rich lithic and quartzose sandstone, siltstone, mudstone, carbonaceous beds and coal seams.
- **Rqph:** Freshwater predominantly cross-bedded quartzose to feldspathic sandstone commonly with overturned cross-bedding, subordinate siltstone with sparse plant and vertebrate fossils (Knocklofty Formation).
- **Rvcg:** Thickly- to thinly-bedded volcanic lithic sandstone, siltstone, mudstone and coal seams, fossil plants on some horizons (Newtown Coal Measures).
- **Rvcq:** Interbedded cross-bedded white quartzose sandstone, quartz-rich lithic sandstone, siltstone and mudstone; Hobart area- upper interval with much dark grey carbonaceous mudstone, thin lenticular coal seams and fossil plants in places
- **Rvvf:** interbedded yellow brown or grey carbonaceous siltstone, mudstone and thin to thick-bedded quartz-rich lithic arkosic sandstone

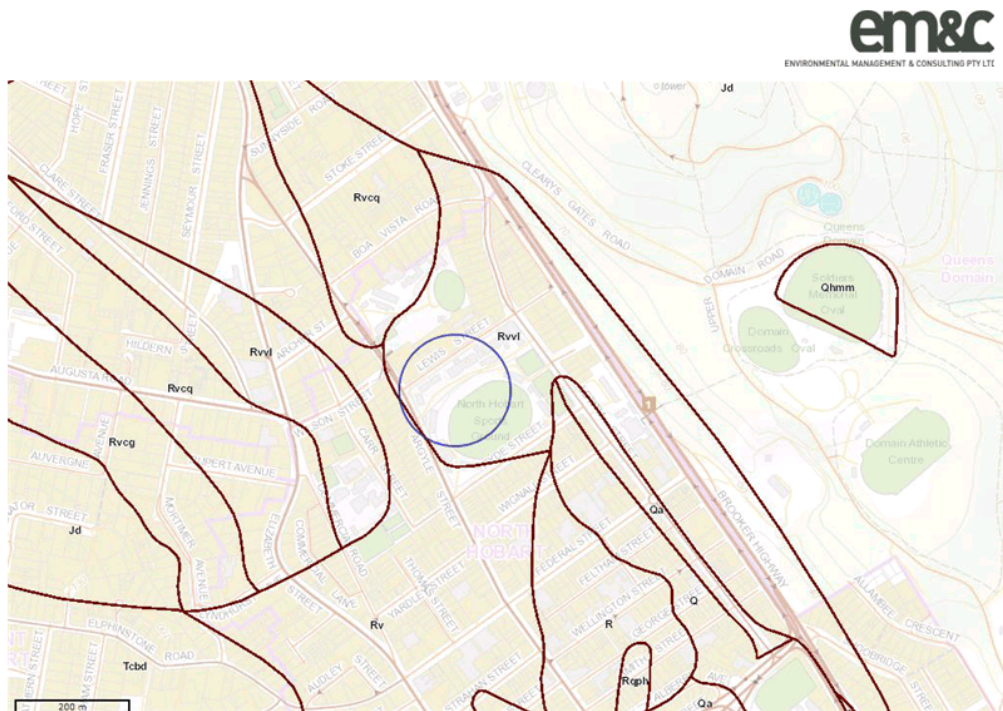

Figure 5.4 Local Area Geology, Source: [www.thelist.tas.gov.au](http://www.thelist.tas.gov.au) (August 2018)

The site's shallow geology/soil horizons were encountered and logged as follows:

|                 |   |
|-----------------|---|
| 0.0 to 0.18mBGS | Asphalt   |
| 0.18 to 0.3mBGS | Fine Crushed Rock Fill, logged as medium sandy, very coarse SAND with medium gravel |
| 0.3 to 0.6mBGS  | Silty medium SAND with clay.  |
| 0.6 to 1.4mBGS  | Very coarse sandy coarse SAND with fine gravel.                                     |

At a depth of 0.5-0.7mBGS within SB2, the soil profile appeared to be comprised of light friable charcoal fragments within a matrix of ash.

### 5.5. Hydrogeology

EM&C completed a search of Water Resources Tasmania's (WRT) Groundwater Information Access Portal (GIAP) in August 2018. This search identified no local groundwater bores within 500m of the site. A screenshot of the search is provided within Appendix F (Ref: wrt.tas.gov.au, 2018).

## 6. SAMPLING AND ANALYSIS QUALITY PLAN

This Sampling and Analysis Quality Plan (SAQP) aims to provide sufficient supporting data to determine the contamination and waste categorisation status of the site and excavated material, relative to the nominated assessment criteria. It also aims to present all data with an acceptable level of confidence. The project SAQP is summarised in the table below. The location PESA sample locations are shown on attached Figure 2, Sample Location Plan.

Table 6.0 Sampling and Analysis Quality Plan Summary

|  |   |
|--|---|
| <b>Objective of assessment</b>                   | <p>To assess the area identified for excavation/ground disturbance works for evidence of soil contamination, which may determine if the development will adversely impact on human health or the environment. Should such a finding be found, identify any specific remediation and/or protections measures required to be implemented before excavation commences.</p> <p>If offsite disposal of soil is required, classify the soil within the definitions provided within the Tasmanian EPA publication <i>Information Bulletin No. 105 Classification and Management of Contaminated Soil for Disposal</i>.</p>       |
| <b>Quality Control samples to be collected</b>   | <p>For soil media:</p> <ul style="list-style-type: none"> <li>• 1 duplicate per 20 samples provided to laboratory.</li> <li>• 1 equipment rinsate per 20 samples.</li> <li>• 1 laboratory prepared trip blank per day sampling.</li> </ul> <p>For Soil Vapour:</p> <ul style="list-style-type: none"> <li>• 1 duplicate per 20 samples provided to laboratory.</li> </ul>   |
| <b>Media to be sampled</b>                       | Soil and sub surface soil vapour.   |
| <b>Analytes to be tested for primary samples</b> | <p><b>Soil:</b> Total hydrocarbons, reported as TRH and TPH fractions, benzene, toluene, ethylbenzene, xylenes, naphthalene (BTEXN), Tasmanian IB105 regulatory suite (metals, cyanide, PCBs, OC pesticides, phenols and PAHs).</p> <p><b>Soil Vapour:</b> NEPM Suite: Total Recoverable Hydrocarbon (F1&amp;F2 Fractions), BTEXN + Vinyl Chloride, PCE, TCE, TCA, cis-1,2- Dichloroethene.</p>   |
| <b>Number of samples</b>                         | <p><b>Soil:</b> Five soil bores (SB1 – SB5) to be completed with laboratory analysis of 11 discrete soil samples.</p> <p>Sample density chosen to allow for in-situ soil classification for disposal at a density of &gt; 1/25m<sup>3</sup>) within shallow profile, along with sufficient samples of the soil which will be retained onsite, below the planned excavation extent of 51.49mAHD.</p> <p>Each soil bore to be screened for Volatile Organic Compounds ('VOC') as a minimum of every third of a meter.</p> <p><b>Soil Vapour:</b> Soil vapour sampled using an installed soil vapour implant SV1_0.8-1.0</p> |
| <b>Sampling methods</b>                          | <p><b>Soil:</b> Samples for analysis to be taken from a clean decontaminated hand auger (rinsate blanks to confirm decontamination process). Where other methods of sampling are employed to obtain a sample, the method of collection should be clearly noted along with the sample results.</p> <p><b>Soil Vapour:</b> Sample for analysis to be collected in new, sterile tedlar bags.</p>   |

|                                   |  |
|-----------------------------------|--|
| Field Screening                   | <p><b>Soil:</b> Screening for VOCs at a minimum of each metre using a photo ionisation detector (PID).</p> <p><b>Soil Vapour:</b> Screening for commonly encountered soil gases during the purging of soil vapour sample point prior to sample collection. Gases to be screened for include methane, carbon dioxide, oxygen, methane LEL, and VOCs.</p>  |
| Laboratory to be used             | <b>NATA accredited laboratory:</b> ALS Environmental   |
| Relevant Risk Assessment Criteria | <p>Environmental Management and Pollution Control Act 1994 (EMPCA)</p> <p>The National Environment Protection (Assessment of Site Contamination) Amendment Measure 2013 (NEPM). The NEPM is state policy in Tasmania for the assessment of site contamination.</p> <p><i>CRC Care (2011)</i>, Health Screening Levels for Petroleum Hydrocarbons in Soil and Groundwater. Technical Report No. 10, Part 2: Application Document.</p> <p>CRC Care (2013), Petroleum hydrocarbon vapour intrusion assessment: Australian guidance, Technical Report No.23, CRC for Contamination Assessment and Remediation of the Environment, Adelaide, Australia.</p> <p>Tasmanian EPA Information Bulletin 105 Classification and Management of Contaminated Soil for Disposal, November 2012.</p> |

## 7. ASSESSMENT CRITERIA

The adopted environmental assessment criteria are detailed in Table 7.0 below.

Table 7.0 Adopted Site Assessment Soil and Soil Vapour (where relevant) Investigation Levels

|                        | Criteria   | Land Use Scenario                           | Relevant for Assessment | Application   |
|------------------------|--|---|-------------------------|---|
| ALL SOIL & SOIL VAPOUR | Health Based Investigation Levels  |   |                         |   |
|                        | Health Investigation Levels  | HIL A                                       | No                      | Not applicable: No residential land use   |
|                        |  | HIL B                                       | No                      |   |
|                        |  | HIL C                                       | No                      | Site would broadly be construed as public open space, however the land use setting for a commercial/industrial receptor is more appropriate due to the potential exposure scenario.   |
|                        |  | HIL D                                       | Yes                     | Assessment locations have been selected to lie below the planned Kiosk building. Occupiers of this space can broadly be defined as commercial/industrial receptors  |
|                        | Health Screening Levels for Vapour Intrusion   | HSL A & HSL B                               | No                      | Not applicable: as above  |
|                        |  | HSL C                                       | No                      |   |
|                        |  | HSL D                                       | Yes                     | Assessment locations have been selected to lie below the planned Kiosk building. Occupiers of this space can broadly be defined as commercial/industrial receptors  |
|                        |  | IMW   | Yes                     | It has been identified that intrusive maintenance works could foreseeably occur at the site within the investigation area. This screening level will also be appropriate for assessing the risk posed to construction workers during the proposed development excavation. |
|                        | Health Screening Levels for Direct Contact   | HSL A                                       | No                      | Not applicable: As above. No soil within the investigation area will remain unsealed following construction.  |
|                        |  | HSL B                                       | No                      |   |
|                        |  | HSL C                                       | No                      |   |
|                        |  | HSL D                                       | No                      |   |
|                        |  | IMW   | Yes                     | It has been identified that intrusive maintenance works could foreseeably occur at the site within the investigation area. This screening level will also be appropriate for assessing the risk posed to construction workers during the proposed development excavation. |
|                        | Ecology Based Investigation Levels   |   |                         |   |
|                        | Ecological Investigation and Screening Levels  | Areas of ecological significance            | No                      | Not applicable. No identified ecological receptor within assessment area.   |
|                        |  | Urban residential and public open space     | No                      |   |
|                        |  | Commercial and industrial                   | No                      |   |
|                        | Management Limits and Aesthetic Investigation Levels                                       |   |                         |   |
|                        | Soil Management Limits for Petroleum Hydrocarbons  | Residential, parkland and public open space | No                      | Not applicable.   |
|                        |  | Commercial and industrial                   | Yes                     | Considered due to on-going commercial use.  |
|                        | Aesthetic Considerations   | All   | No                      | Not applicable.   |
| SOIL ABOVE 51.5mAHD    | Tasmanian Waste Guidelines Classification and Management of Contaminated Soil for Disposal |   |                         |   |
|                        | Controlled Waste Disposal Criteria   | -   | Yes                     | In-situ soil currently situated above 51.49mAHD has been identified for removal within Drawing NHO_K 003. To determine the suitability for offsite disposal and to categorise the waste, the soil should be assessed against the Controlled Waste Disposal Criteria.      |

## 8. ESA WORKSCOPE

The following work scope was completed to meet the assessment objective.

### 8.1.1. Soil Assessment

Mobilisation of two EM&C Environmental Consultants to site on 7 and 10 September 2018 to drill five soil bores, designated SB1 to SB5. All drilling locations are shown on attached Figure 2. The completed work scope comprised of:

- Logging of soil profile during and the field screening of soil samples collected from each completed soil bore at regular depth intervals and changes in soil type for the presence of VOCs using a photo ionisation detector (PID).
- The collection and laboratory analysis of eleven primary soil samples:
  - Screening and collection of samples at changes in soil type, areas of visible staining and diverse relative depths.
  - Of the eleven soil samples collected, six primary samples were taken from soil located above 51.49mAHD (which is proposed to be excavated), with the remaining five primary samples taken below this depth, intending to be reflective of in-situ conditions following the proposed development.
  - In order to identify hot spots, samples destined for analysis were selected based on where the level of contamination was expected to be the most significant.
  - The collection and laboratory analysis of the following field QA/QC sample:
    - One blind duplicate sample designated QCP\_7/9/18, a duplicate of SB1\_0.2-0.3.
  - Collection of samples into sterile glass jars and placement of these jars into a chilled and insulated esky.
  - Transportation of samples to a NATA-accredited laboratory for analysis of the schedule listed within the Sampling and Analysis Quality Plan (Section 6 above).
- The collection and analysis of additional QA/QA samples, an equipment rinsate blank and a trip blank soil sample.

#### 8.1.2. Sub Slab Soil Vapour Assessment

During the soil assessment stage conducted on 10 September 2018, one soil vapour sample point was installed to a depth of 0.8-1.0 meter below current ground surface. The sample point will reflect soil vapour conditions at 51.2-51.4mAHD, which will be located 0.09-0.29m below the proposed finished ground level. Sample locations are provided on attached Figure 2. The completed installation and sampling program comprised:

- Installation of one soil vapour sample point
- The purging and field monitoring of the composition of the soil gas profile including the recording of the concentration of the following compounds:
  - Methane;
  - Oxygen;
  - Carbon dioxide;
  - LEL% (methane); and
  - Volatile organic compounds.
- The collection and laboratory analysis of soil vapour from the previously installed sample point (SV1\_0.8-1.0).
  - Collection of soil vapour sample using a graduated syringe and storage of sample within a new/sterile tedlar bag.
  - The collection and laboratory analysis of the following field QA/QC sample:
    - One blind duplicate sample designated QCP\_11/9/18.
      - Upon receipt of the sample QCP\_11/9/18, the laboratory reported to EM&C that the tedlar bag had leaked during transit, making analysis not possible.
  - Transportation of samples to a NATA-accredited laboratory for analysis of the schedule listed within the Sampling and Analysis Quality Plan (Section 6 above).

## 9. RESULTS

The following section presents field observations, measurements and laboratory results. Laboratory results have been presented relative to:

- NEPM Tier 1 assessment criteria for identified potential receptors at the site.
- *Tasmanian EPA Information Bulletin 105 Classification and Management of Contaminated Soil for Disposal, November 2012* criteria for potential offsite disposal categorisation.

‘Sand’ has been selected conservatively as the soil texture group<sup>6</sup> most representative of the site’s confining geology. Assessment drill logs are included within Appendix E.

Due to the proposed development involving the excavation of soil, EM&C have adjusted the sample depth for assessment purposes to reflect the post development sample depth when assessing against screening criteria.

### 9.1. Soil Field Observations

No detectable concentrations of VOCs were detected through the screening of collected soil samples using a PID.

### 9.2. Soil Analytical Results v Commercial Land Use Criteria

Summarised soil sample results assessing Contaminants of Potential Concern (COPC) are presented below and in attached Table 1. Laboratory certificates of analysis are included within Appendix C.

- No exceedance of the NEPM Health Investigation Levels for a ‘commercial/industrial’ land use (HIL D).
- No exceedance of the NEPM Health Screening Levels (HSLs) for a ‘commercial/industrial’ land use (HSL D).
- No exceedance of CRC CARE intrusive maintenance worker (IMW) HSLs for either direct contact or vapour intrusion were found.
- No exceedance of the NEPM Soil Management Limits for ‘commercial and industrial’ land use.

---

<sup>6</sup> Reference to soil texture groups as defined by United States Department of Agriculture (USDA)

### 9.3. Soil Analytical Results v TAS Soil Disposal Guidelines (IB105)

Summarised soil sample results of samples situated above the extent of the proposed excavation cutting, assessing COPCs against the Tasmanian Soil Disposal Guidelines<sup>7</sup> is provided within attached Table 2. A laboratory prepared comparative analytical report of the same samples is included within Appendix C.

- The following samples exceeded the maximum allowable total concentration for Low Level Contaminated Soil/Level 2 for benzo(a)pyrene (2.0mg/kg)
  - SB1\_0.2-0.3 (3.0mg/kg)
  - SB2\_0.2-0.3 (2.2mg/kg)
  - SB5\_0.3-0.4 (2.7mg/kg)

Based on the above exceedances of Level 2 criteria, under the Tasmanian Soil Disposal Guidelines<sup>8</sup> the soil identified for excavation and disposal can be classified as Contaminated Soil/Level 3.

### 9.4. Soil Vapour Results

Summarised soil vapour sample results assessing Contaminants of Potential Concern (COPC) are presented below and in attached Table 3. Laboratory certificates of analysis are included within Appendix C.

- No exceedance of the NEPM Health Screening Levels (HSLs) for a 'commercial/industrial' land use (HSL D) were identified.
- No exceedance of CRC CARE intrusive maintenance worker (IMW) HSLs vapour intrusion were found.

### 9.5. QA/QC Results

Field QA/QC analytical results are presented in attached Tables 4a and 4b. Copies of the NATA endorsed laboratory reports, including internal QA/QC results and chain-of-custody documentation for the primary laboratory are included within Appendix C.

The findings of the projects precision, accuracy, representativeness, comparability and completeness data quality indicators (DQIs) are summarised within this section. In addition a DQI checklist has been attached in Appendix D. Additionally, CRC CARE Checklists L and K are included within Appendix G.

#### 9.5.1. Comparability

- An appropriately experienced person - in accordance with EM&C's Assessment Procedure detailed within the SAQP outlined in Section 6, collected all samples.
- The laboratory used was NATA-accredited for the requested analytes and provided documented methods of analysis.

---

<sup>7</sup> Information Bulletin 105: Classification and Management of Contaminated Soil for Disposal (v3 2018)

<sup>8</sup> Information Bulletin 105: Classification and Management of Contaminated Soil for Disposal (v3 2018)

**9.5.2. Precision**

Assessment of quality control data revealed:

- Soil field duplicates reported COPC concentrations within the assessment relative percentage difference (RPD) criteria<sup>9</sup> for all duplicate samples taken.
- The soil vapour field duplicate of SV1\_0.8-1.0 leaked during transit to the laboratory, and therefore was not analysed.
- Non-conformity was observed within the following laboratory standards, calibration blanks and verifications. Internal Quality Control (QCI) reports are supplied within Appendix C

**9.5.3. Accuracy**

All field equipment was calibrated prior to use. See calibration certificates provided within Appendix E.

**9.5.4. Representativeness**

- All media identified in the project's SAQP in Section 6 have been sampled.
- All samples were put into containers provided by a NATA-accredited laboratory, stored in a chilled esky (soil) and transported to each laboratory within holding times. See Appendix C for laboratory sample receipt notices.
- Target analytes were not detected in trip blank or equipment rinsate blank samples.
- No inconsistencies were identified within the method of sample collection.
- No inconsistencies have been identified in laboratory methods.

**9.5.5. Completeness**

- All samples locations have been sampled in accordance with the SAQP.
- All samples were sent to each laboratory within technical holding times and with accurately completed documentation.
- EM&C considers the collected dataset sufficiently complete to be relied upon to support the assessments data quality objectives.

---

<sup>9</sup> Which is calculated based on the primary result, relative to the primary laboratory LOR

## 10. CONCLUSIONS

At the completion of the Preliminary Environmental Site Assessment (PESA), undertaken to make an assessment of the proposed development, and subject to the assessment scope and statement of limitations (Section 11), EM&C conclude that:

- The assessed level of site contamination does **not** pose an unacceptable level of risk to workers involved in redevelopment of the site, or to future users of the site, as a result of proposed excavation.
- The assessed level of site contamination does **not** pose an unacceptable level of risk to the environment from the proposed excavation, due to an absence of ecological receptors within the assessment area.
- Assessment of the material identified for excavation above 51.49mAHD has found:
  - The material is suitable for onsite reuse within the area proposed for 'fill' within drawing number NHO\_K 003, which is to be a covered terrace area, and contained within a blockwork retaining wall (Appendix A). This area is also identified within attached Figure 2 as a purple shaded area.
    - This conclusion is made on the basis that ecological screening levels are not applicable, due to the absence of ecological receptors within this area.
  - The material is unsuitable for reuse anywhere onsite where ecological screening levels apply, which are unsealed areas at a depth of less than 2 meters below ground surface, which is representative of root and habitation zones of many flora and fauna species. Examples of such areas unsuitable for reuse of excavated material includes (but is not limited to):
    - Grassed areas;
    - Garden beds; and
    - Other unsealed areas
  - The concentration of benzo(a)pyrene within the soil would presently see this material classified as Contaminated Soil/Level 3 under the Tasmanian waste classification guidelines IB105 if removed from the site.
  - Should the excavated material be removed from site, the soil is to be handled in accordance with Tasmanian Soil Disposal Guidelines<sup>10</sup>.

EM&C recommend the following remediation/protection measures are implemented before excavation commences:

- A construction and environmental management plan should be prepared to ensure the excavated soil and associated contaminants do not spread to areas where ecological screening levels are applicable.

---

<sup>10</sup> Information Bulletin 105: Classification and Management of Contaminated Soil for Disposal (v3 2018)

With reference to the Potentially Contaminated Land Code of the Hobart Interim Planning Scheme 2015, clause E2.6.2 Excavation (b), the completed preliminary environmental site assessment has established, based on the plans provided:

- The planned 'excavation **does not adversely impact on human health or the environment**'; and
- '**specific remediation and protection measures**' are required to be implemented before excavation commences'

The report conclusions are made against both the existing and proposed future land use, as identified within the drafting plans (Appendix A). Further assessment may be required if a change to a more sensitive land use is proposed or the environmental condition of other areas of the site need to be assessed.

## 11. STATEMENT OF LIMITATIONS

This report has been prepared in accordance with the scope of services described in the contract or agreement between Environmental Management & Consulting Pty Ltd (EM&C) and the Client. The report relies upon data, surveys, measurements and results taken at or under the particular times and conditions specified herein. Any findings, conclusions or recommendations only apply to the aforementioned circumstances and no greater reliance should be assumed or drawn by the Client. Furthermore, the report has been prepared solely for use by the Client and EM&C accepts no responsibility for its use by other parties. The client agrees that EM&C's report or associated correspondence will not be used or reproduced in full or in part for promotional purposes and cannot be used or relied upon in any prospectus or offering.

No warranties express or implied are made. Subject to the Scope of Work, EM&C's assessment is limited strictly to identifying typical environmental conditions associated with the subject property and does not include evaluation of the structural conditions of any buildings on the subject property or any other issues. Additionally unless otherwise stated EM&C did not conduct soil, air, wastewater or other matrix analyses including asbestos or perform contaminated sampling of any kind. Nor did EM&C investigate any waste material from the property that may have been disposed of off the site, nor related waste management practices.

The results of this assessment are based upon site inspection conducted by EM&C personnel, information from interviews with people who have knowledge of site conditions and information provided by regulatory agencies. All conclusions and recommendations regarding the property are the professional opinions of the EM&C personnel involved with the project, subject to the qualifications made above.

While normal assessments of data reliability have been made, EM&C assumes no responsibility or liability for errors in any data obtained from regulatory agencies, statements from sources outside of EM&C, or developments resulting from situations outside the scope of this project.

EM&C is not engaged in environmental auditing and/or reporting of any kind for the purpose of advertising sales promoting, or endorsement of any clients' interests, including raising investment capital, recommending investment decisions, or other publicity purposes. EM&C assumes no responsibility or liability for errors in any data obtained from regulatory agencies, statements from sources outside of EM&C, or developments resulting from situations outside the scope of this project.

Information relating to soil, groundwater, waste, air or other matrix conditions in this document is considered to be accurate at the date of issue. Surface, subsurface and atmospheric conditions can vary across a particular site or region, which cannot be wholly defined by investigation. As a result, it is unlikely that the results and estimations presented in this report will represent the extremes of conditions within the site that may exist. Subsurface conditions including contaminant concentrations can change in a limited period of time and typically have a high level of spatial heterogeneity.

From a technical perspective, there is a high degree of uncertainty associated with the assessment of subsurface, aquatic and atmospheric environments. They are prone to be heterogeneous, complex environments, in which small subsurface features or changes in geologic conditions or other environmental anomalies can have substantial impact on water, air and chemical movement.

Major uncertainties can also occur with source characterization assessment of chemical fate and transport in the environment, assessment of exposure risks and health effects, and remedial action performance. These factors make uncertainty an inherent feature of potentially impacted sites. Technical uncertainties are characteristically several orders of magnitude greater at impacted sites than for other kinds of projects.

EM&C's professional opinions are based upon its professional judgment, experience, and training. These opinions are also based upon data derived from the limited testing and analysis described in this report. It is possible that additional testing and analysis might produce different results and/or different opinions or other opinions. EM&C has limited its investigation(s) to the scope agreed upon with its client. EM&C believes that its opinions are reasonably supported by the testing and analysis that has been undertaken (if any), and that those opinions have been developed according to the professional standard of care for the environmental consulting profession in this area at this time. Other opinions and interpretations may be possible. That standard of care may change and new methods and practices of exploration, testing and analysis may develop in the future, which might produce different results.

EM&C is not in the business of providing legal advice.

**Tables Notes:**

- Assessment criteria are obtained from National Environment Protection (Assessment of Site Contamination) Amendment Measure 2013 (NEPC, 1999).
- Assessment criteria are obtained from CRC CARE Technical Report no. 10: Health screening levels for petroleum hydrocarbons in soil and groundwater (Friebel & Nadebaum 2011).
- ESL criteria have been established for protection of plant root zones and are applicable in non-arid areas for assessment of soil within the 0- 2mBGS depth range.
- Laboratory analysis of naphthalene is conducted using two separate methods, EP080: extracting sample for volatiles and EP075(SIM)B: extracting sample for semi-volatiles. The naphthalene concentration from EP080 is used for F2 calculation.
- HIL is based on the 8 carcinogenic PAHs and their TEFs (potency relative to B[a]P adopted by CME 2008 (refer Schedule B7). The B[a]P TEQ is calculated by multiplying the concentration of each carcinogenic PAH in the sample by its B[a]P TEF and summing these products. TEQs have been calculated using half of the LOR result, where <LOR was reported.
- Sample point RLs have been estimated based on the ground surface contour plan provided within Drawing NHO\_K\_003
- sample depth is based on post development sample depth. For all samplings within the zone planned for excavation, EM&C has conservatively assumed a screening depth of 0-1m with a SAND confining geology

"-" denotes analyte not tested by laboratory, or no criteria available.

Bold values are concentrations reported above laboratory limit of reporting

Highlighted values exceed nominated investigation criteria.

**Table Abbreviations**

NEPM: National Environment Protection (Assessment of Site Contamination) Amendment Measure 2013  
 CRC CARE: Cooperative Research Centre for Contamination Assessment and Remediation of the Environment  
 HSL: Health Screening Level

HIL: Health Investigation Level  
 ESL: Environmental Screening Level  
 EIL: Environmental Investigation Level  
 IMW: Intrusive Maintenance Worker  
 PID: Photo-ionisation Detection

**Tables Notes:**

1) Assessment criteria are obtained Tasmanian EPA Information Bulletin 105 Classification and Management of Contaminated Soil for Disposal, 2018

2) Laboratory analysis of naphthalene is conducted using two separate methods, EPO80: extracting sample for volatiles and EPO75(SIM)B: extracting sample for semi-volatiles. The naphthalene concentration from EPO80 is used for F2 calculation.

"-" denotes analyte not tested by laboratory, or no criteria available.

Bold values are concentrations reported above laboratory limit of reporting

Highlighted values exceed nominated investigation criteria.

**Table Notes**

1) Assessment criteria are obtained from National Environment Protection (Assessment of Site Contamination) Amendment Measure 2013 (NEPC, 1999)

2) Assessment criteria for an Intrusive Maintenance Worker (IMW) are obtained from CRC CARE Technical Report no. 10: Health screening levels for petroleum hydrocarbons in soil and groundwater (Friebel & Nadebaum 2011)

3) Sample point RLs have been estimated based on the ground surface contour plan provided within Drawing NHO\_K 003

"-" denotes analyte not tested by laboratory, or no criteria available.

Highlighted values exceed nominated investigation criteria. Bold values are concentrations reported above laboratory limit of reporting

**Tables Notes:**

1) Laboratory analysis of naphthalene is conducted using two separate methods, EP080: extracting sample for volatiles and EP075(SIM)B: extracting sample for semi-volatiles. The naphthalene concentration from EP080 is used for F2 calculation.

"-" denotes analyte not tested by laboratory, or no criteria available.

Bold values are concentrations reported above laboratory limit of reporting

Highlighted values exceed nominated investigation criteria.

**QC- Acceptance Criteria**

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable, and have been adopted for this assessment:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

**Tables Notes:**

"-" denotes analyte not tested by laboratory, or no criteria available.

1) Helium shroud concentrations are measured via a calibrated handheld helium meter, reporting results in parts per million by volume. The µg/m<sup>3</sup> equivalent concentration has been calculated for comparison against the reported concentration of helium within collected soil vapour samples. The formula used for calculation is: µg/m<sup>3</sup> = ppmv x atomic mass ÷ 24.45 x 1000

2) Relative concentration is the concentration of helium found within the sample/sample train relative to the concentration found within the shroud during sample collection. Where the analysed concentration of helium was below the LOR, the LOR was used for comparison calculations.

3) CRC CARE provides guidance on the concentration of helium allowable during field leak testing (10% of the shroud concentration) however the document does not provide guidance on the acceptable levels within the collected sample.

4) California EPA Department of Toxic Substances Control provided guidance in July 2015 ([https://www.dtsc.ca.gov/SiteCleanup/upload/VI\\_ActiveSoilGasAdvisory\\_FINAL.pdf](https://www.dtsc.ca.gov/SiteCleanup/upload/VI_ActiveSoilGasAdvisory_FINAL.pdf)) advising a concentration of up to 5% of the helium concentration used within the shroud is acceptable within the collected sample.

5) QA/QC provided above consist of all QA/QC samples taken since prior reporting period

6) Laboratory analysis of naphthalene is conducted using two separate methods, EP080: extracting sample for volatiles and EP075(SIM)B: extracting sample for semi-volatiles. The naphthalene concentration from EP080 is used for F2 calculation.

"-" denotes analyte not tested by laboratory, or not relevant to QA/QC performance criteria being tested.

**Bold** values are concentrations reported above laboratory limit of reporting

*Italicised* values have been calculated based on field reported readings, taken from calibrated field instruments.

**Bold** values are concentrations reported above laboratory limit of reporting

Other Information required

Application is made in response to North Hobart Football Club's development application on potentially contaminated land. EM&C are acting on our behalf to investigate our site for contamination issues arising from any potentially contaminating activities that may have occurred either on our occupied property, or the neighboring property located at 393 Argyle Street. If you could please search your records for both our site and the neighboring property that would be greatly appreciated.

NORTH HOBART FOOTBALL CLUB INC., ARGYLE STREET, NORTH HOBART

SITE NUMBER: 2661

This letter is to advise you that whilst we have received payment for the renewal of your licence to keep dangerous goods for the period of 01/07/2005 to 30/06/2006, we have not received your **completed** *Section 1 of the Declaration* on the *Notice for Payment* form. Without this form your licence cannot be processed and issued.

In order to assist you, please find enclosed *Section 1 of the Declaration* on the *Notice for Payment* form. Please ensure that you **complete and return** the form to this office **no later than Monday 23<sup>rd</sup> January 2006**.

If you are keeping dangerous goods above the exemption limits specified in Schedule 3 of the *Dangerous Goods (General) Regulations 1998* without a current licence you expose yourself to possible prosecution.

If you have any queries please do not hesitate to contact Leza Wardlaw on 6233 8353.

Thank you for your co-operation.

Yours faithfully

Keven J Williams

## Important Information

Declaration must be completed and returned with payment

Please note that this Notice for Payment is not a licence to keep dangerous goods. A licence will only be issued when payment for the amount shown on this Notice is made and an "Application for a Licence" form is completed and returned to Workplace Standards Tasmania. Failure to make this payment and return the completed form will mean that the site location referenced above is not licensed and therefore in breach of Regulation 9 of the Dangerous Goods (General) Regulations 1998. Please ensure that you make prompt payment so as not to expose yourself to possible prosecution. This fee is excluded from GST by a Determination by the Treasurer under Division 81 of the GST Act 1999.

Dear Sir/Madam

***DANGEROUS GOODS ACT 1998***  
**LICENCE TO KEEP DANGEROUS GOODS**  
**NORTH HOBART FOOTBALL CLUB INC, ARGYLE STREET, NORTH HOBART**  
**SITE No. 2661**

Thank you for the payment for the renewal of *Licence to Keep Dangerous Goods* for the above referenced site location for the period 01/07/2005 to 30/06/2006.

Unfortunately you overlooked completing Section 1 of the Declaration on the *Notice for Payment* form (original enclosed). Please arrange for this Section to be completed and return to Workplace Standards as this declaration is required for the licence to be processed and issued.

Yours faithfully

Daryl Gillie

## GUIDANCE NOTES FOR TERMS USED IN THIS APPLICATION FORM

Please read these notes before completing the *Application to Keep Dangerous Goods (Keeper's Licence)* form.

|                                |   |
|--------------------------------|---|
| <b>dangerous goods</b>         | any substance prescribed as dangerous goods, or a substance or article determined by Workplace Standards Tasmania (the Competent Authority) in accordance with the Regulations, to be dangerous goods   |
| <b>depot/site</b>              | any store, warehouse, premises or land used for storing dangerous goods   |
| <b>keeper's licence</b>        | a licence issued by Workplace Standards Tasmania to a licensee to keep or store dangerous goods at a particular depot/site  |
| <b>licence</b>                 | a keeper's licence in force under the <i>Dangerous Goods (General) Regulations 1998</i>   |
| <b>licensed depot</b>          | a depot in relation to which a licence is issued under the <i>Dangerous Goods (General) Regulations 1998</i>  |
| <b>licensee</b>                | the holder of a licence to keep dangerous goods. The licensee needs to be a legal entity, that is a company, or a natural person - someone who will assume responsibility for the dangerous goods at the depot to be licensed. The licensee does not need to be the occupier of the depot. The trading name of the business should not be entered here. |
| <b>licensee number</b>         | the licence number issued by Workplace Standards Tasmania to licensees  |
| <b>occupier of a depot</b>     | means the person who occupies the depot/site such as a manager, employer, a site owner or tenant. The occupier does not have to be the same person as the licensee.   |
| <b>Regulations</b>             | <i>Dangerous Goods (General) Regulations 1998</i> . The Regulations applicable to this application form are Regulations 9(5) and 10(1).   |
| <b>site number</b>             | the site number allocated to a specific depot/site, issued by Workplace Standards Tasmania  |
| <b>street address of depot</b> | street address of the depot/site where the dangerous goods will be kept. Please do not use a post office box number for the street address of the depot.  |

*DANGEROUS GOODS ACT 1998*

Dear Sir or Madam

**RE: Site Number 2661 - Argyle Street, North Hobart**

On or about 1 June 2000, an invoice was mailed to you for the renewal of your licence to keep dangerous goods up to the period ending 31 June 2001.

Workplace Standards Tasmania (WST) has no record of the payment of the licence fee, or receipt of notification in writing of any change in circumstances at the site that would indicate that you no longer have an obligation to be licensed.

Statement of account as at 31 August 2000 was forwarded to you during the first week of September 2000, to which WST still have no record of a response.

The circumstances that may have lead to no response from you could have included:-

1. You may have sold the premises, which is still operating with the dangerous goods storage as previously licensed. However, there may have been an oversight and change of ownership/transfer of ownership may not have been forwarded to WST.
2. The dangerous goods stored no longer exceed the licensable quantities listed in Schedule 3 of the [Dangerous Goods (General) Regulations 1998] ['Regulations'].
3. You may still own the site, but no longer operate a dangerous good storage facility. If this being the case you are required to notify WST and sign the appropriate statutory declaration. The declaration must state that the storage facility has been decommissioned and the site rehabilitated in accordance with the relevant Australian Standards or Code of Practice. A statutory declaration is enclosed. It should be noted that a dangerous goods facility which is no longer in use and not abandoned in the correct manner, is deemed to be an operative dangerous goods facility and requires licensing.

Offices: 30 Gordons Hill Road, Rosny Park Mail: PO Box 56, ROSNY PARK TAS 7018 or DX 70415 Hbt

- 2 -

Should you require further information on the abandonment of a dangerous goods storage site please contact WST.

4. You are still operating a dangerous goods storage facility that is subject to the licensing requirements of the *Dangerous Goods Act 1998* and Regulations, and have failed for whatever reason to renew the licence.

At present you are operating an unlicensed dangerous goods facility. This is in breach of sub-regulation 9(5) of the regulations, and carries a maximum penalty of 10 penalty units\*.

If WST does not receive renewal of the license or advice to reasons why a license is no longer required by 16 February 2001, officers of WST will visit your premises for the purpose of collecting evidence for forwarding to the Director for Public Prosecutions, with the recommendation that legal proceedings be initiated against you.

Please note, the granting of a licence to store dangerous goods:-

1. Places upon you the responsibility to ensure the storage facility is used and operated safely and that measures to deal with an emergency are in place and operational:-  
and
2. All staff receives the required and appropriate training in the safe operation of the facility and understands the required emergency procedures.

For further advice in relation to this matter please contact Workplace Standards Tasmania on 1300 366 322.

Yours faithfully

  
S J Hyam

**Subject: RE: Potentially Contaminated Land Code - 1-5 Ryde Street, North Hobart**

From: Salter, Simone - To: alex@enviromac.com.au - Date: 30 August 2018 at 8:38 AM, Attachments: image001.jpg image002.jpg

Hi Alex

Our records indicate the following:

1. An old brickworks site on the property adjacent to and identified the contaminant as a landfill. The address is 393 Argyle Street, North Hobart that has been identified with above, the operation was in place between 1816-1850s.
2. At 44 Ryde Street we have listed, but a note to delete from the register.

I hope this helps.

Thanks  
Simone

**Cc:** Simon Chislett <simonc@enviromac.com.au>

**Subject:** Potentially Contaminated Land Code - 1-5 Ryde Street, North Hobart

Good Afternoon HCC.

**Att: Environmental Health Unit**

EM&C have been engaged by *The North Hobart Football Club* to provide an Environmental Site Assessment to support their upcoming an application for development on potentially contaminated land.

Our client intends to construct a new building along the northern edge of the North Hobart Oval, and have identified to us that either the land intended for development, or the surrounding land may be classified as *potentially contaminated* based on the definition supplied within the HCC interim planning scheme.

The land intended for development is:

NORTH HOBART OVAL & BOWLS CLUB' - 1-5 RYDE ST NORTH HOBART TAS 7000

PID: 2003969

Title reference 119922/1

As the land has been identified by our client to us as potentially contaminated land, can you please disclose the activities carried out on the land in question, or in the instance where the potentially contaminating activity occurred on a neighbouring parcel of land, can you please give me the address/PIDs/title numbers along with the relevant activities carried out, such as the ones listed in table E2.2 within the planning scheme.

The reason I'm after this information is because the historical industries that have caused the land to become contaminated in the first place will impact the nature of our assessment, as it will guide us to what contaminants we should be testing for.

As I understand it, local councils have access to an overlay of potentially contaminated sites within the list, is it possible for me to access this overlay, or could you please provide me a screenshot of the local area with the potentially contaminating activities or affected areas of land highlighted?

Happy to have a chat with you further over the phone if you like,

Many thanks  
Al

Mr Alex Lovibond  
Environmental Management and Consulting  
Level 2, 67 Letitia Street  
NORTH HOBART TAS 7002

Dear Mr Lovibond

**PROPERTY INFORMATION REQUEST**

**1-5 Ryde Street, North Hobart  
PID 2003969**

On 29 August 2018, the Contaminated Sites Unit received your Property Information Request relating to the land referred to above ('the Site'). A search of relevant databases and records has been undertaken.

No records relating to contamination or potentially contaminating activities on the Site were found.

EPA Tasmania received enquiries regarding redevelopment of 31 Federal Street (2016) and 393 Argyle Street (1998); Hobart City Council may have records relevant to your enquiry.

WorkSafe Tasmania [WST] records indicate that dangerous goods have been stored in underground storage tanks [UST] at several properties with 150m of the boundaries of the Site

|                            |           |          |                |
|----------------------------|-----------|----------|----------------|
| • 27-29 Federal Street     | 1963-1985 | WST File | K204           |
| • 31 Federal Street        | 1972-1986 | WST file | H631           |
| • 37-41 Federal Street     | 1986      | WST File | IS67155 vol 14 |
| • 49a-53 Federal Street    | 1974-1977 | WST File | S534           |
| • 396 Argyle St (Unit 1&2) | 1972-1984 | WST File | R286           |

No other records relating to contamination or potentially contaminating activities at the Site or adjacent properties were found.

The search of records is restricted to those held by EPA Tasmania and includes records relating to: The *Environmental Management and Pollution Control (Underground Petroleum Storage Systems) Regulations 2010*; Industrial Sites (which are or have been regulated by EPA Tasmania); historical landfills; and contamination issues reported to the Contaminated Sites Unit. In addition, the Incidents and Complaints database and records relating to the historical storage of dangerous goods (as detailed below) are searched.

WorkSafe Tasmania (1300 366 322 or [wstinfo@justice.tas.gov.au](mailto:wstinfo@justice.tas.gov.au)) may have issued dangerous goods licences and/or may hold relevant records for the Site and adjoining properties. As the storage of dangerous goods/fuels is an environmentally relevant activity, you may wish to contact them for further information.

Please note that the dangerous goods licensing records referred to by EPA Tasmania are for sites with underground storage tanks that ceased holding Dangerous Goods Licences prior to 1993. WorkSafe Tasmania hold the records for these Licences after 1993.

EPA Tasmania does not hold records on all sites that are or may be contaminated. You should consider obtaining a site history to determine the likelihood of contamination. If contamination on the Site or an adjacent property is considered likely, further assessment by a competent environmental assessment practitioner is recommended. Site assessments should be conducted in accordance with the *National Environment Protection (Assessment of Site Contamination) Measure 1999*, National Environment Protection Council (or as varied). <http://epa.tas.gov.au/regulation/contaminated-sites/identification-and-assessment-of-contaminated-land/contaminated-site-assessment>

Please note since 1 July 2015, the Director has required all environmental site assessments and reports submitted to the Contaminated Sites Unit for consideration to be prepared by a person certified as a specialist contaminated sites consultant under a scheme approved by the Director. Effective 30 June 2018, the endorsed scheme is operated by Certified Environmental Practitioners (CEnvP): Consultants certified under this scheme are approved to use the seal **CEnvP Site Contamination**. <https://www.cenvp.org>.

Further details are available at <http://epa.tas.gov.au/regulation/contaminated-sites/identification-and-assessment-of-contaminated-land/engaging-a-contaminated-site-assessment-consultant>.

As local councils are able to issue Environment Protection Notices, Environmental Infringement Notices and record complaints, you may wish to contact them for additional information that may be relevant to the site. Further, if the Site has historically been subject to a permit under the *Land Use Planning and Approvals Act 1993*, the Council would have issued the permit.

Under the *Right to Information Act 2009* (RTI Act), you are entitled to apply for any records mentioned within this letter such as reports, letters, or other relevant documents. For further information on how the RTI process works and how to request information under the RTI Act please visit the Department of Primary Industries, Parks, Water and Environment website.

If you are purchasing a property, you should consider Part 5A of the *Environmental Management and Pollution Control Act 1994* (EMPCA) which defines and specifies requirements for managing contaminated sites. If there is reason to believe the site is, or is likely to be, contaminated there are certain requirements that you must meet (e.g. notification of a likely contaminated site to the Director, EPA as outlined in section 74B of the EMPCA).

Although all due care has been taken in the preparation of this letter, the Crown gives no warranty, express or implied, as to the accuracy or completeness of the information provided. The Crown and its servants or agents accept no responsibility for any loss or damage arising from reliance upon this letter, and any person relying on the letter does so at their own risk absolutely.

As you are aware, property searches incur a charge of \$237.00. An invoice is enclosed.

If you have any queries in relation to the matters above, please contact the Contaminated Sites Unit using the details at the head of this correspondence or refer to the EPA website at [www.epa.tas.gov.au](http://www.epa.tas.gov.au) and click on 'Regulation' to locate information on Underground Fuel Tanks and Contaminated Sites.

Yours sincerely

**Bruce Napier**

**General Comments**

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please direct any queries related to sample condition / numbering / breakages to Client Services.**
- Sample Disposal - Aqueous (3 weeks), Solid (2 months) from receipt of samples.
- **Analytical work for this work order will be conducted at ALS Springvale.**
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**

Issue Date : 11-Sep-2018  
 Page : 2 of 3  
 Work Order : EM1814532 Amendment 0  
 Client : ENVIRONMENTAL MANAGEMENT & CONSULTING P/L

### Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- No sample container / preservation non-compliance exists.

### Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Matrix: **SOIL**

| Laboratory sample ID | Client sampling date / time | Client sample ID | SOIL - E A055-103 Moisture Content | SOIL - EP075-TAS Benzo(a)pyrene - Waste Classification (TAS) | SOIL - P-201 TAS EPA 105 (no TBT) | SOIL - P-22 (Meb) minus PSD Soil Characterisation Suite (minus PSD) | SOIL - S-04 TR-HBTEXN | SOIL - S-26 8 metals/TR-HBTEXN/PAH |

### General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
^ = This result is computed from individual analyte detections at or above the level of reporting  
ø = ALS is not NATA accredited for these tests.  
~ = Indicates an estimated value.

- EP080: Poor duplicate precision observed for sample EM1814532-004. Confirm sample heterogeneity via re-extraction and re-analysis
- pH analysis is done under non-stirring condition.
- ALS is not NATA accredited for the analysis of Exchangeable Cations on Alkaline Soils when performed under ALS Method ED006.
- (EP071): (EM1814515\_004) Poor duplicate precision observed due to sample heterogeneity. Insufficient sample remains to confirm sample heterogeneity via re-extraction and re-analysis
- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1,2,3-cd)pyrene (0.1), Dibenz(a,h)anthracene (1.0), Benzo(g,h,i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.
- ED007 and ED008: When Exchangeable Al is reported from these methods, it should be noted that Rayment & Lyons (2011) suggests Exchange Acidity by 1M KCl - Method 15G1 (ED005) is a more suitable method for the determination of exchange acidity (H<sup>+</sup> + Al<sup>3+</sup>).

#### General Comments

This guideline comparison report **only** provides evaluation of total concentration data against upper limit thresholds for the 'Fill Material', 'Low Level Contaminated Soil', and 'Contaminated Soil' categories in Table 2 of EPA Tasmania Information Bulletin No. 105.

This guideline comparison report is **NOT** a soil classification report. Classification of soils requires consideration of a number of other factors including preliminary site investigation, sampling density and statistical calculations.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

This guideline comparison report only provides evaluation data where chemical parameters specifically listed within Table 2 of EPA Tasmania Information Bulletin No. 105 are analysed by ALS using the **P-20/1 package in full**. P-20/1 package does not include Tributyltin.

Red shading is applied where the result is equal to or greater than the guideline upper limit and/or equal to or lower than the guideline lower limit. Red shading is not applied to the 'Summary of Thresholds Reached or Exceeded'.

**For the 'Summary of Thresholds Reached or Exceeded' to accurately function, all samples must be analysed and included in the 'Analytical Results' section of the following report. Please verify that all required IDs are listed and analysed.**

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

 Client : ENVIRONMENTAL MANAGEMENT & CONSULTING P/L  
 Project : EMC1866

### General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot  
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
 LOR = Limit of reporting  
 RPD = Relative Percentage Difference  
 # = Indicates failed QC

### Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

### Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

### Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

### Summary of Outliers

#### Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- NO Method Blank value outliers occur.
- NO Laboratory Control outliers occur.
- Duplicate outliers exist - please see following pages for full details.
- Matrix Spike outliers exist - please see following pages for full details.
- For all regular sample matrices, NO surrogate recovery outliers occur.

#### Outliers : Analysis Holding Time Compliance

- NO Analysis Holding Time Outliers exist.

#### Outliers : Frequency of Quality Control Samples

- NO Quality Control Sample Frequency Outliers exist.

### Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: ✖ = Holding time breach ; ✔ = Within holding time.

### Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

| Quality Control Sample Type                             |            | Count |         | Rate (%) |          |            | Quality Control Specification  |
|---|------------|-------|---------|----------|----------|------------|--------------------------------|

### Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

| Analytical Methods                                      | Method  | Matrix | Method Descriptions   |
|---|---------|--------|---|
| pH in soil using a 0.01M CaCl <sub>2</sub> extract      | EA001   | SOIL   | In house: Referenced to Rayment and Lyons (2011) 4B3 (mod.) or 4B4 (mod.) 10 g of soil is mixed with 50 mL of 0.01M CaCl <sub>2</sub> and tumbled end over end for 1 hour. pH is measured from the continuous suspension. This method is compliant with NEPM (2013) Schedule B(3)   |
| Moisture Content  | EA055   | SOIL   | In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM (2013) Schedule B(3) Section 7.1 and Table 1 (14 day holding time).  |
| Exchangeable Cations on Alkaline Soils                  | * ED006 | SOIL   | In house: Referenced to Soil Survey Test Method C5. Soluble salts are removed from the sample prior to analysis. Cations are exchanged from the sample by contact with alcoholic ammonium chloride at pH 8.5. They are then quantitated in the final solution by ICPAES and reported as meq/100g of original soil.  |
| Exchangeable Cations                                    | ED007   | SOIL   | In house: Referenced to Rayment & Lyons (2011) Method 15A1. Cations are exchanged from the sample by contact with Ammonium Chloride. They are then quantitated in the final solution by ICPAES and reported as meq/100g of original soil. This method is compliant with NEPM (2013) Schedule B(3) (Method 301)  |
| Exchangeable Cations with pre-treatment                 | ED008   | SOIL   | In house: Referenced to Rayment & Higginson (2011) Method 15A2. Soluble salts are removed from the sample prior to analysis. Cations are exchanged from the sample by contact with Ammonium Chloride. They are then quantitated in the final solution by ICPAES and reported as meq/100g of original soil. This method is compliant with NEPM (2013) Schedule B(3) (Method 301)   |
| Total Metals by ICP-AES                                 | EG005T  | SOIL   | In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM (2013) Schedule B(3)  |
| Total Mercury by FIMS                                   | EG035T  | SOIL   | In house: Referenced to AS 3550, APHA 3112 Hg - B (Flow-injection (SnCl <sub>2</sub> ) (Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl <sub>2</sub> which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (2013) Schedule B(3)  |
| Hexavalent Chromium by Alkaline Digestion and DA Finish | EG048G  | SOIL   | In house: Referenced to USEPA SW846, Method 3060A. Hexavalent chromium is extracted by alkaline digestion. The digest is determined by photometrically by automatic discrete analyser, following pH adjustment. The instrument uses colour development using dephenylcarbazide. Each run of samples is measured against a five-point calibration curve. This method is compliant with NEPM (2013) Schedule B(3)   |
| Total Cyanide by Segmented Flow Analyser                | EK026SF | SOIL   | In house: Referenced to APHA 4500-CN C / ASTM D7511. Caustic leachates of soil samples are introduced into an automated segmented flow analyser. Complex bound cyanide is decomposed in a continuously flowing stream, at a pH of 3.8, by the effect of UV light. A UV-B lamp (312 nm) and a decomposition spiral of borosilicate glass are used to filter out UV light with a wavelength of less than 290 nm thus preventing the conversion of thiocyanate into cyanide. The hydrogen cyanide present at a pH of 3.8 is separated by gas dialysis. The hydrogen cyanide is then determined photometrically, based on the reaction of cyanide with chloramine-T to form cyanogen chloride. This then reacts with 4-pyridine carboxylic acid and 1,3-dimethylbarbituric acid to give a red colour which is measured at 600 nm. This method is compliant with NEPM (2013) Schedule B(3) |

| Analytical Methods                                       | Method     | Matrix | Method Descriptions  |
|--|------------|--------|--|
| Total Fluoride   | EK040T     | SOIL   | (In-house) Total fluoride is determined by ion specific electrode (ISE) in a solution obtained after a Sodium Carbonate / Potassium Carbonate fusion dissolution.  |
| Organic Matter   | EP004      | SOIL   | In house: Referenced to AS1289.4.1.1 - 1997. Dichromate oxidation method after Walkley and Black. This method is compliant with NEPM (2013) Schedule B(3).   |
| Polychlorinated Biphenyls (PCB)                          | EP066      | SOIL   | In house: Referenced to USEPA SW 846 - 8270D Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (2013) Schedule B(3) (Method 504)   |
| Pesticides by GCMS                                       | EP068      | SOIL   | In house: Referenced to USEPA SW 846 - 8270D Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM (2013) Schedule B(3) (Method 504,505)  |
| TRH - Semivolatile Fraction                              | EP071      | SOIL   | In house: Referenced to USEPA SW 846 - 8015A Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40. Compliant with NEPM amended 2013.  |
| PAH/Phenols (SIM)  | EP075(SIM) | SOIL   | In house: Referenced to USEPA SW 846 - 8270D. Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (2013) Schedule B(3) (Method 502 and 507)  |
| Benzo(a)pyrene- Waste Classification (TAS requirements)  | EP075-TAS  | SOIL   | In house: Referenced to USEPA SW 846 - 8270D Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM (2013) Schedule B(3) (Method 502)  |
| TRH Volatiles/BTEX                                       | EP080      | SOIL   | In house: Referenced to USEPA SW 846 - 8260B. Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. Compliant with NEPM amended 2013.  |
| TRH - Semivolatile Fraction                              | EP071      | WATER  | In house: Referenced to USEPA SW 846 - 8015A The sample extract is analysed by Capillary GC/FID and quantification is by comparison against an established 5 point calibration curve of n-Alkane standards. This method is compliant with the QC requirements of NEPM (2013) Schedule B(3)   |
| TRH Volatiles/BTEX                                       | EP080      | WATER  | In house: Referenced to USEPA SW 846 - 8260B Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. Alternatively, a sample is equilibrated in a headspace vial and a portion of the headspace determined by GCMS analysis. This method is compliant with the QC requirements of NEPM (2013) Schedule B(3) |
| Preparation Methods                                      | Method     | Matrix | Method Descriptions  |
| NaOH leach for CN in Soils                               | CN-PR      | SOIL   | In house: APHA 4500 CN. Samples are extracted by end-over-end tumbling with NaOH.  |
| pH in soil using a 0.01M CaCl <sub>2</sub> extract       | EA001-PR   | SOIL   | In house: Referenced to Rayment and Higginson 4B1, 10 g of soil is mixed with 50 mL of 0.01M CaCl <sub>2</sub> and tumbled end over end for 1 hour. pH is measured from the continuous suspension. This method is compliant with NEPM (2013) Schedule B(3) (Method 103)  |
| Exchangeable Cations Preparation Method (Alkaline Soils) | ED006PR    | SOIL   | In house: Referenced to Rayment and Lyons 2011 method 15C1.  |
| Exchangeable Cations Preparation Method                  | ED007PR    | SOIL   | In house: Referenced to Rayment & Higginson (1992) method 15A1. A 1M NH <sub>4</sub> Cl extraction by end over end tumbling at a ratio of 1:20. There is no pretreatment for soluble salts. Extracts can be run by ICP for cations.  |
| Alkaline digestion for Hexavalent Chromium               | EG048PR    | SOIL   | In house: Referenced to USEPA SW846, Method 3060A.   |
| Total Fluoride   | EK040T-PR  | SOIL   | In house: Samples are fused with Sodium Carbonate / Potassium Carbonate flux.  |

| Preparation Methods  | Method   | Matrix | Method Descriptions   |
|--|----------|--------|---|
| 1:5 solid / water leach following drying at 40°C           | EN34-AD  | SOIL   | 10 g of 40°C dried soil is mixed with 50 mL of reagent grade water and tumbled end over end for 1 hour. Water soluble salts are leached from the soil by the continuous suspension. Samples are settled and the water filtered off for analysis.  |
| Hot Block Digest for metals in soils sediments and sludges | EN69     | SOIL   | In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM (2013) Schedule B(3) (Method 202) |
| Organic Matter   | EP004-PR | SOIL   | In house: Referenced to AS1289.4.1.1 - 1997. Dichromate oxidation method after Walkley and Black. This method is compliant with NEPM (2013) Schedule B(3) (Method 105)  |
| Methanolic Extraction of Soils for Purge and Trap          | ORG16    | SOIL   | In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.   |
| Tumbler Extraction of Solids                               | ORG17    | SOIL   | In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.  |
| Tumbler Extraction of Solids - VIC EPA Screen              | ORG17-EM | SOIL   | In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.  |
| Separatory Funnel Extraction of Liquids                    | ORG14    | WATER  | In house: Referenced to USEPA SW 846 - 3510B 100 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using 60mL DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM (2013) Schedule B(3) . ALS default excludes sediment which may be resident in the container.                            |
| Volatiles Water Preparation                                | ORG16-W  | WATER  | A 5 mL aliquot or 5 mL of a diluted sample is added to a 40 mL VOC vial for sparging.   |

### Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Matrix: AIR

### General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting  
^ = This result is computed from individual analyte detections at or above the level of reporting  
ø = ALS is not NATA accredited for these tests.  
~ = Indicates an estimated value.

- EP101: ALS quality procedures (QWI-EN/38) permit, for organic trace analysis, that the recoveries of 20% of target compounds may lie outside of established control limits as long as these remain within acceptable ranges defined within referenced USEPA methods.
- EP101, EP103: Results reported in µg/m³ are calculated from PPBV results based on a temperature of 25°C and atmospheric pressure of 101.3 kPa.
- CAN-001: Results for Pressure - As Received are measured under controlled conditions using calibrated laboratory gauges. These results are expressed as an Absolute Pressure. Equivalent gauge pressures may be calculated by subtracting the Pressure - Laboratory Atmosphere taken at the time of measurement.
- CAN-001: Results for Pressure - Gauge as Received are obtained from uncalibrated field gauges and are indicative only. These results may not precisely match calibrated gauge readings and may vary from field measurements due to changes in temperature and pressure
- EP104: Results reported in mg/m³ are calculated from Mol% results based on a temperature of 25°C and atmospheric pressure of 101.3 kPa
- EP104: Sample canisters were received at sub-ambient pressures and required dilution in the laboratory prior to analysis. LOR values have been adjusted accordingly

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB), Laboratory Control Spike (LCS) and Laboratory Control Spike Duplicate (DCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) and Matrix Spike Duplicate (MSD) Report; Recovery and Acceptance Limits

### Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

### General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key :      Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot  
             CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
             LOR = Limit of reporting  
             RPD = Relative Percentage Difference  
             # = Indicates failed QC

### Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

### Method Blank (MB), Laboratory Control Spike (LCS) and Laboratory Control Spike Duplicate (DCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control terms Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (DCS) refers to certified reference materials, or known interference free matrices spiked with target analytes. The purpose of these QC parameters are to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS and DCS.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

### Summary of Outliers

#### Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO** Method Blank value outliers occur.
- **NO** Duplicate outliers occur.
- **NO** Matrix Spike outliers occur.
- Laboratory Control outliers exist - please see following pages for full details.
- For all regular sample matrices, **NO** surrogate recovery outliers occur.

#### Outliers : Analysis Holding Time Compliance

- **NO** Analysis Holding Time Outliers exist.

#### Outliers : Frequency of Quality Control Samples

- Quality Control Sample Frequency Outliers exist - please see following pages for full details.

#### Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for VOC in soils vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: AIR

Evaluation: ✖ = Holding time breach ; ✔ = Within holding time.

| Method  | Sample Date | Extraction / Preparation |                    |            | Analysis      |                  |            |

### Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **AIR**

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

| Quality Control Sample Type                 |           | Count |         | Rate (%) |          |            | Quality Control Specification  |

### **Brief Method Summaries**

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

| Analytical Methods  | Method       | Matrix | Method Descriptions  |
|---|--------------|--------|--|
| VOCs in Air by USEPA TO15r - Extended Suite               | EP101-15X    | AIR    | In house: Referenced to USEPA TO15r Volatile Organic Compounds in Air by USEPA TO15. Extended Suite  |
| VOCs in Air by USEPA TO15r - Extended Suite (mass/volume) | EP101-15X-MV | AIR    | In house: Referenced to USEPA TO15r Volatile Organic Compounds in Air by USEPA TO15. Extended Suite (Calculated Concentration)   |
| Volatile TPH/TRH in Gaseous Samples                       | EP103-PC     | AIR    | Volatile TPH/TRH by GC-MS with Preconcentration and Thermal Desorption Injection Based on USEPA TO15, MassDEP APH (Rev1 2009) and TPH/NEPM Fractions (2013)  |
| Volatile TPH/TRH in Gaseous Samples (Calc Conc)           | EP103-PC-MV  | AIR    | Volatile TPH/TRH by GC-MS with Preconcentration and Thermal Desorption Injection Based on USEPA TO15, MassDEP APH (Rev1 2009) and TPH/NEPM Fractions (2013) Calculated from ppbv results based on given Temperature and Atmospheric Pressure and mid-range molecular weights |
| Permanent Gases and Light Hydrocarbons                    | EP104        | AIR    | Hydrocarbons, Carbon Dioxide and Carbon Monoxide by GC-FID-TCD. Gases by GC-TCD In house: Referenced to ASTM D1945 applied to Gases and Light Hydrocarbons (C1-C4) using capillary GC  |
| Permanent Gases and Light Hydrocarbons (mass/volume)      | EP104-MV     | AIR    | Permanent Gases and Light Hydrocarbons - Calculated as mass/volume concentration from percentage composition and given temperature and pressure.   |

| <b>Matrix Spike:</b> EP075B: Polynuclear Aromatic Hydrocarbons - RPD exceeds LOR based limits. Calculated RPD limits: 0%-20%. Actual result 28.3%. This reported QSC breach considered minor and not significant enough to compromise the integrity of the specific batch ID.   |                  |             |              |               |                    |                       |                                   |                   |
| <b>Lab Duplicate:</b> EP080/071: Total Petroleum Hydrocarbons - RPD exceeds LOR based limits. Calculated RPD limits: 0%-50%. Actual result 95.4%. This intra lab QAQC result was taken from a sample not part of this assessments samples, but from an external sample analysed as part of the laboratory batch. This reported QSC breach considered minor and not significant enough to compromise the integrity of the specific batch ID.   |                  |             |              |               |                    |                       |                                   |                   |
| <b>Lab Duplicate:</b> Total Recoverable Hydrocarbons - NEPM 2013 fractions - RPD exceeds LOR based limits. Calculated RPD limits: 0%-50%. Actual result 61.0%. This intra lab QAQC result was taken from a sample not part of this assessments samples, but from an external sample analysed as part of the laboratory batch. This reported QSC breach considered minor and not significant enough to compromise the integrity of the specific batch ID.  |                  |             |              |               |                    |                       |                                   |                   |
| <b>Lab Duplicate:</b> EG005T: Total Metals by ICP-AES - MS recovery not determined, background level greater than or equal to 4x spike level. This reported QSC breach considered minor and not significant enough to compromise the integrity of the specific batch ID.  |                  |             |              |               |                    |                       |                                   |                   |
| EP071 and EP071-SV: Intra Lab Quality Control Sample Frequency Outliers exist. Not enough duplicate sample bottles provided for intra lab duplicate and/or QC matrix spike testing. This result may be due to standard laboratory practice of running samples through in grouped project 'analytical lots'. This practise may involve splitting EM&Cs submitted samples over multiple analytical lots. EM&C have no control over the number of intra lab duplicates in which their samples are analysed, other than providing additional sample bottles at the specified frequency (a practise that was observed in this instance). Even when this practice is observed, the splitting of EM&Cs sample bottles over multiple 'analytical lots' may result in a non compliance, due to a lack of frequency of quality control samples provided to the laboratory. This reported QSC breach considered minor and not significant enough to compromise the integrity of specific batch ID. |                  |             |              |               |                    |                       |                                   |                   |
| EN1805943   | No               | Yes         | No           | No            | No                 | No                    | Yes                               | 17/09/18          |
| <b>Lab Control:</b> EP101: VOCs by USEPA Method TO15r - Recovery greater than upper control limit. Calculated Limits: 79-120%. Actual Result 122%. This reported QSC breach considered minor and not significant enough to compromise the integrity of the specific batch ID.   |                  |             |              |               |                    |                       |                                   |                   |
| <b>Frequency of Intra Lab QC Samples:</b> Permanent Gases and Light Hydrocarbons - Intra Lab Quality Control Sample Frequency Outliers exist. Not enough duplicate sample bags provided for intra lab duplicate and/or QC matrix spike testing. This result may be due to standard laboratory practice of running samples through in grouped project 'analytical lots'. This practise may involve splitting EM&Cs submitted samples over multiple analytical lots. EM&C have no control over the number of intra lab duplicates in which their samples are analysed, other than providing additional sample bags at the specified frequency. Even when this practice is observed, the splitting of EM&Cs samples over multiple 'analytical lots' may result in a non compliance, due to a lack  |                  |             |              |               |                    |                       |                                   |                   |
| Accuracy (a quantitative measure of the closeness of the reported data to the true value)   |                  |             |              |               |                    |                       |                                   |                   |
|   |                  |             |              |               |                    | Yes                   | No                                | NA                |
| Was the field equipment calibrated?   |                  |             |              |               |                    |                       |                                   |                   |
| Comments: See Calibration Certificates Attached in Appendix E   |                  |             |              |               |                    |                       |                                   |                   |
| Have trip, field and rinsate samples been collected?  |                  |             |              |               |                    |                       |                                   |                   |
| Comments: Rinsate and trip blanks were utilised. A field blank sample was deemed to be unrequired by EM&C.  |                  |             |              |               |                    |                       |                                   |                   |

## Data Quality Indicators Checklist

| Representativeness (the confidence expressed qualitatively that are representative of each media type present on the site under investigation) |                                     |                                     |                                     |

## LEAK TESTING

## TEST ONE - Sample Point Permeability (using syringe)

| Time  | Initial air volume in syringe | Final air volume in syringe | Test Result | Comments                           |
|-------|-------------------------------|-----------------------------|-------------|------------------------------------|
| 11.52 | 60                            | 60.0                        |             |                                    |
| 11.53 | -                             | 60.0                        | PASS        | Point induced no measurable vacuum |

## TEST TWO - Sample Train Shut-In Test (using syringe and pressure gauge)

| Time  | In-line pressure (kPa) | Test Result | Comments           |
|-------|------------------------|-------------|--------------------|
| 11.54 | -56                    | FAIL        |                    |
| 11.55 | -56                    | PASS        | Train holds vacuum |

## TEST THREE - Helium Shroud (over soil vapour bore surface seal)

| Time  | Concentration in Shroud (ppm) | Concentration in Tedlar | Test results: | Result is considered a pass if the concentration within the tedlar bag is less than 10% of the concentration within the shroud |
|-------|-------------------------------|-------------------------|---------------|--|
| 12.08 | $9 \times 10^6$               | $0 \times 10^{-4}$      | PASS          |  |

## Sample Point Purging

| Time       | Purge Rate (mL/min) | CH <sub>4</sub> (%) | CO <sub>2</sub> (%) | O <sub>2</sub> (%) | CO (%) | H <sub>2</sub> S (%) | LEL % (Methane) | PID * (Total hydrocarbon) ppm | App. pressure kPa |

## SAMPLING

|                                       |       |  |       |
|---------------------------------------|-------|--|-------|
| Time sampling begin:                  | 12.30 | Time sampling finished:                    | 13.06 |
| Initial pressure in suma canister(s): | NA    | Final pressure in suma canister(s):        | NA    |
| Primary Sample Suma canister ID:      | NA    | Duplicate / Split Sample suma canister ID: | NA    |
| Sampling Train ID:                    | NA    | Flow restrictor flow rate:                 | NA    |

\* Denotes field meter intake was connected to tail gas of purging meter and results should be interpreted with caution

Typical flow rate through GA5000 Landfill Gas Meter is 550mL/min

% Methane recorded by GA5000 Landfill Gas Meter considered unreliable in the presence of petroleum hydrocarbons

% LEL recorded by ImpactPRO (four gas meter) considered unreliable once the % of oxygen falls below 10%.

Flow rate during purging or sampling should not exceed 8inHg (27kPa) to prevent the desorption of petroleum hydrocarbons from soil (CRC CARE TR.23)

|                              |   |
|                              |   |
|                              |   |

**Calibration Method**

Unit calibrated in accordance with MiniRAE Operating Instructions and Maintenance Manual (the 'user manual').

Method of calibration: Per section 4.4 of the user manual

Post calibration bump test reading of Calibration Gas

| Isobutylene | Expected | Result |
|-------------|----------|--------|
|             | 100      | 100    |

Calibration completed by:

Simon Chislett

## Calibration Certificate

*This document hereby certifies that this instrument detailed has been calibrated to the parameters listed below.*

*Certificate Print Date:* 22 August, 2018

**Call ID:** 00221730

*Calibration Date:* 22 August, 2018

*Job / SO Number:* 232364

*Next Calibration Due:* 22 August, 2019

Checklist for Reviewing  
Soil Vapour Data

| Checklist for Reviewing Soil Vapour Data   |                                       |  |                   |
|--|---------------------------------------|--|-------------------|
| Report ID  | Report Description                    |  | Report Issue Date |
| EN1805943  | Soil Vapour Sampling - September 2018 |  | 17/09/18          |
|  | Acceptable                            | Acceptable, irregularities have been noted | Not acceptable    |
| <b>Sample Collection</b>   |                                       |  |                   |
|  |                                       |  | Yes No NA         |
| Active Soil Vapour Data  |                                       |  |                   |
| Did the probe rod have an internal inert tube (SS, Teflon, nylon)?   |                                       |  |                   |
| Comments: - Teflon   |                                       |  |                   |
| Was the probe reused? If so was it adequately decontaminated between samples?  |                                       |  |                   |
| Comments: - New stainless steel sample probes were used at the time of SV point installation.  |                                       |  |                   |
| Were at least 3 dead volumes of the probe purged?  |                                       |  |                   |
| Avoid excessive purging, unless field screening (O <sub>2</sub> , CO <sub>2</sub> , PID or FID and tracer gas) conducted to demonstrate absence of atmospheric air intrusion.  |                                       |  |                   |
| Comments: See field screening logs attached.   |                                       |  |                   |
| Did the field screening of PID, O <sub>2</sub> and CO <sub>2</sub> provide results consistent with those expected based on sample location (in relation to contamination), depth and soil type? Are the results consistent with the CSM (in particular parameters that relate to and support biodegradation processes)?  |                                       |  |                   |
| Comments: Results align with expectations  |                                       |  |                   |
| Were samples collected deep enough to minimise air infiltration?   |                                       |  |                   |
| Comments: -  |                                       |  |                   |
| Did it rain shortly before the sampling event?   |                                       |  |                   |
| Soil vapour sampling should be avoided following significant precipitation   |                                       |  |                   |
| Generally there is no consensus on how much rain can fall or how much time should elapse before taking samples. It depends on soil type, ground surface cover, amount of rain and previous soil moisture content. As a general guide sampling from wells in open ground (not beneath buildings or concrete pavement) should occur 3-7 days after 25mm rainfall has occurred within an approximate 24 hour time period. |                                       |  |                   |
| Comments: -  |                                       |  |                   |
| Was a reliable method used to ensure the absence of atmospheric air leakage?   |                                       |  |                   |
| Tracer compound used to demonstrate no leakage down or around probe and at all sample train fittings.  |                                       |  |                   |
| Comments: Helium tracer compound utilised and analysed during field leak detection procedures as well as within laboratory analysed samples. See Soil Vapour QA/QC table attached to report.   |                                       |  |                   |
| Were samples collected in appropriate containers for the chemicals of concern?   |                                       |  |                   |
| Comments: -  |                                       |  |                   |
| If canisters were used, was each canister certified clean or batch tested?   |                                       |  |                   |
| Comments: Tedlar bags used   |                                       |  |                   |
| Were dedicated flow controllers & sample trains used for each sample?  |                                       |  |                   |
| It is not recommended that flow controllers and sample trains are re-used. Cleaning of these components in the field has been shown to be ineffective and the re-use of such equipment can result in cross-contamination.  |                                       |  |                   |
| Comments: New sterile syringe used   |                                       |  |                   |

Checklist for Reviewing  
Soil Vapour Data

ENVIRONMENTAL MANAGEMENT &amp; CONSULTING PTY LTD

|  | Yes | No | NA |
|--|-----|----|----|
| <b>Were vacuum pumps used in the sample collection? If so, did the flow rate decrease because of resistance to flow?</b>   |     |    |    |
| Comments: -  |     |    |    |
| <b>Were excessive vacuums required to obtain a sample?</b>   |     |    |    |
| >100 inches of H <sub>2</sub> O (~8 inches of Hg) should be avoided  |     |    |    |
| Comments: -  |     |    |    |
| <b>Were samples collected upstream of the vacuum pump (where used)?</b>  |     |    |    |
| Comments: -  |     |    |    |
| <b>Was the sample flow rate through the sorbent tubes monitored and reported throughout the sampling period?</b>   |     |    |    |
| Comments: -  |     |    |    |
| <b>For canisters, were samples stored at ambient air temperature?</b>  |     |    |    |
| Comments: -  |     |    |    |
| <b>For sorbent tubes, were these stored and shipped at &lt;4°C</b>   |     |    |    |
| Comments: -  |     |    |    |
| <b>Were samples analysed within recommended holding times?</b>   |     |    |    |
| Comments: -  |     |    |    |
| Passive Soil Vapour Programs   |     |    |    |
| <b>Were method and trip blanks analysed?</b>   |     |    |    |
| Needed to show absence of contaminants from lab or transportation back and forth to site   |     |    |    |
| Comments: -  |     |    |    |
| <b>Were samplers left in the ground for consistent and sufficient time?</b>  |     |    |    |
| Generally a few days to 2 weeks (unless in an area with very high levels being sampled).   |     |    |    |
| Collected in same sequence as deployed   |     |    |    |
| Comments: -  |     |    |    |
| <b>Were duplicate samples collected and how do they compare?</b>   |     |    |    |
| Comments: Active sampling was conducted, however, the primary quality control duplicate leaked during transit to the laboratory meaning that it could not be analysed, see DQI checklist and QA/QC report                                |     |    |    |
| <b>Are data used appropriately?</b>  |     |    |    |
| For what purpose?  |     |    |    |
| Were active soil vapour samples collected for comparison?  |     |    |    |
| How well do passive and active samples compare?  |     |    |    |
| Comments: Active samples taken, therefore this question is irrelevant.   |     |    |    |
| <b>Could measured values be from infiltration of contaminated atmospheric air or from volatiles emitted from an overlying surface (e.g., asphalt, dirty soil)? (i.e. is there a chance of cross contamination from the environment?)</b> |     |    |    |
| Comments: -  |     |    |    |
| <b>Are relative concentrations of compounds detected consistent with expectations from other media (soil vapour, groundwater, bulk soil)?</b>  |     |    |    |
| Comments: -  |     |    |    |

Checklist for Reviewing  
Soil Vapour Data

ENVIRONMENTAL MANAGEMENT &amp; CONSULTING PTY LTD

|  | Yes | No | NA |
|--|-----|----|----|
| <b>Were the passive samplers stored and shipped at &lt;4°C</b>   |     |    |    |
| Comments: -  |     |    |    |
| <b>Were samples analysed within recommended holding times?</b>   |     |    |    |
| Comments: -  |     |    |    |
| <b>Sample Analysis</b>   |     |    |    |
| The following questions should be asked when examining the analysis of any type of soil vapour sample: active or passive.  |     |    |    |
| Active and Passive Soil Vapour Samples   |     |    |    |
| <b>What methods are being used? Can they detect the target compounds at the required levels of sensitivity?</b>  |     |    |    |
| Comments: EP101 N5G and EP104  |     |    |    |
| <b>Have the method required calibration standards been analysed?</b>   |     |    |    |
| Comments: -  |     |    |    |
| <b>Are the reported values within the documented calibration range of the instrument?</b>  |     |    |    |
| Comments: -  |     |    |    |
| <b>Are any compounds co-eluting?</b>   |     |    |    |
| <p>Comments: For GCMS analyses such as that carried out on these samples (EP101 codes), there are two situations and reporting protocols that may apply for co-eluting compounds, as follows;</p> <ol style="list-style-type: none"> <li>When 2 (or more) compounds co-elute and cannot be separated on the basis of their MS fragmentation ions, they are reported together, for example in this assessment "meta- &amp; para- Xylene" co-eluted and have been reported together.</li> <li>When 2 (or more) compounds co-elute and they can be separated on the basis of their MS fragmentation ions without interference effects, they are reported as the individual components. In this situation there is generally no need to comment and data quality is not impacted</li> </ol> <p>For GC-FID or GC-TCD analyses (such as the gas analysis EP104), only the first of these two examples apply, as there is no MS spectrum. Any compounds that co-elute for this analysis will be reported together, which in this case has not occurred.</p> |     |    |    |

Checklist for Reviewing  
Soil Vapour Data

ENVIRONMENTAL MANAGEMENT &amp; CONSULTING PTY LTD

|   |   | Yes                                 | No                                  | NA                                  |
|---|---|-------------------------------------|-------------------------------------|-------------------------------------|
| <b>Have the method required QA/QC samples been analysed (blanks, duplicates, etc.)</b>  |   |                                     |                                     |                                     |
| Laboratory Duplicates   | The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%. | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |
| Method Blank  | The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination.   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |
| Laboratory Control Spike  | The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |
| Matrix Spike  | The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |
| <b>Are the calibration standards within method required holding times and traceable to a certified source?</b>  |   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |
| Comments: See attached documentation  |   |                                     |                                     |                                     |
| <b>In what units are the data reported (<math>\mu\text{g/l}</math>, <math>\mu\text{g/m}^3</math>, ppbv, ppmv)?</b>  |   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |
| Comments: $\mu\text{g/m}^3$   |   |                                     |                                     |                                     |
| <b>For high concentrations, have large dilutions been performed and do these affect the interpretation of the results? (i.e. are the detection limits above the adopted screening values for the PHCs evaluated?)</b> |   | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| Comments: -   |   |                                     |                                     |                                     |
| <u>Passive Soil Vapour Samples</u>  |   |                                     |                                     |                                     |
| In addition to the analytical issues summarised above, the following issues should be examined with passive soil vapour samples:  |   |                                     |                                     |                                     |
| <b>How are the samples desorbed from the collector?</b>   |   | <input type="checkbox"/>            | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| Comments:   |   |                                     |                                     |                                     |
| <b>Is the desorption process quantitative and does it fractionate?</b>  |   | <input type="checkbox"/>            | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| Comments:   |   |                                     |                                     |                                     |
| <b>What units are the data reported in (mass etc.)?</b>   |   | <input type="checkbox"/>            | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| Comments:   |   |                                     |                                     |                                     |

**7.2.4 3 ERINDALE PLACE & 163 STRICKLAND AVENUE, SOUTH  
HOBART - DWELLING AND ASSOCIATED VEGETATION  
CLEARING  
PLN-18-493 - FILE REF: F19/1264**

---

Address: 3 Erindale Place & 163 Strickland Avenue, South Hobart

Proposal: Dwelling and Associated Vegetation Clearing

Expiry Date: 18 January 2019

Extension of Time: Not applicable

Author: Victoria Maxwell

**RECOMMENDATION**

That: Pursuant to the *Hobart Interim Planning Scheme 2015*, the Council approve the application for dwelling and associated vegetation clearing at 3 Erindale Place & 163 Strickland Avenue, South Hobart for the reasons outlined in the officer's report and a permit containing the following conditions be issued:

**GEN**

**The use and/or development must be substantially in accordance with the documents and drawings that comprise PLN-18-493 3 ERINDALE PLACE SOUTH HOBART TAS 7004 - Final Planning Documents except where modified below.**

Reason for condition

To clarify the scope of the permit.

**PLN s3**

**The title boundary shared between Council's neighbouring land and the applicant's property shall be clearly marked by the applicant on the ground before any works commence.**

Reason for condition

To clarify the scope of the permit.

#### **ENG sw4**

**The new storm water connection must be constructed and existing abandoned connections sealed by the Council at the owner's expense, prior to the first occupation.**

**Detailed engineering drawings must be submitted and approved, prior to commencement of work. The detailed engineering drawings must include:**

- 1. the location of the proposed connection; and**
- 2. the size of the connection appropriate to satisfy the needs of the development.**

**All work required by this condition must be undertaken in accordance with the approved detailed engineering drawings.**

*Advice:*

- *The applicant is advised to submit detailed design drawings via a Council City Infrastructure Division [application for a new stormwater connection](#). If detailed design to satisfy this condition is submitted via the planning condition endorsement process there may be fees associated with the assessment, and once approved the applicant will still need to submit an application for a new stormwater connection with Council City Infrastructure Division.*
- *Where building / plumbing approval is also required, it is recommended that documentation to satisfy this condition is submitted well before submitting documentation for building/plumbing approval. Failure to address planning condition requirements prior to submitting for building/plumbing approval may result in unexpected delays.*

Reason for condition

To ensure the site is drained adequately.

#### **ENG 2b**

**Prior to the issue of any approval under the *Building Act 2016* or the commencement of works on site (whichever occurs first), a certified vehicle barrier design (including site plan with proposed location(s) of installation) prepared by a suitably qualified engineer, compliant with Australian Standard AS/NZS1170.1:2002, must be submitted to the Council.**

*Advice:*

- *If the development's building approval includes the need for a Building Permit from the Council, the applicant is advised to submit detailed design of vehicular barrier as part of the Building Application. If the development's building approval is covered under Notifiable Work the applicant is advised to submit detailed design of vehicular barrier as a condition endorsement of the planning permit condition. Once the certification has been accepted, the Council will issue a condition endorsement (see general advice on how to obtain condition endorsement).*

Reason for condition

To ensure the safety of users of the access driveway and parking module and compliance with the standard.

#### **ENG 2c**

**Prior to the first occupation, vehicular barriers must be inspected by a qualified engineer and certification submitted to the Council confirming that the installed vehicular barriers comply with the certified design and Australian Standard AS/NZS1170.1:2002.**

*Advice:*

- *Certification may be submitted to the Council as part of the Building Act 2016 approval process or via condition endorsement (see general advice on how to obtain condition endorsement).*

## Reason for condition

To ensure the safety of users of the access driveway and parking module and compliance with the relevant standards.

**ENG 1**

**Any damage to council infrastructure resulting from the implementation of this permit, must, at the discretion of the Council:**

- 1. Be met by the owner by way of reimbursement (cost of repair and reinstatement to be paid by the owner to the Council); or**
- 2. Be repaired and reinstated by the owner to the satisfaction of Council.**

**A photographic record of the Council's infrastructure adjacent to the subject site must be provided to the Council prior to any commencement of works.**

**A photographic record of the Council's infrastructure (e.g. existing property service connection points, roads, buildings, stormwater, footpaths, driveway crossovers and nature strips, including if any, pre-existing damage) will be relied upon to establish the extent of damage caused to the Council's infrastructure during construction. In the event that the owner/developer fails to provide to the Council a photographic record of the Council's infrastructure, then any damage to the Council's infrastructure found on completion of works will be deemed to be the responsibility of the owner.**

Reason for condition

To ensure that any of the Council's infrastructure and/or site-related service connections affected by the proposal will be altered and/or reinstated at the owner's full cost.

#### **ENV 10**

**No native vegetation may be removed from 3 Erindale Place more than 16m from the southern edge of the dwelling, unless required for the installation of the sewer line.**

Reason for condition

To ensure the use/development does not result in unnecessary or unacceptable loss of priority biodiversity values

#### **ENV 15**

**All construction vehicles and machinery must be effectively cleaned of soil both before entering and before leaving the property.**

**Soil cleaned from construction vehicles and machinery must not be allowed, either directly or indirectly, to enter waterways or the Council's stormwater system.**

*Note: further information on effective measures for washdown can be found [here](#).*

Reason for condition

To minimise the spread of weeds and pathogens.

#### **ENV 2**

**Sediment and erosion control measures, in accordance with an approved soil and water management plan (SWMP), must be installed prior to the commencement of work and maintained until such time as all disturbed areas have been stabilised and/or restored or sealed to the Council's satisfaction.**

**A SWMP must be submitted prior to the issue of any approval under the *Building Act 2016* or the commencement of work, whichever occurs first. The SWMP must be prepared in accordance with the Soil and Water Management on Building and Construction Sites fact sheets (Derwent Estuary Program, 2008), available [here](#).**

**Particular attention must be given to managing erosion and sedimentation risk when establishing the bushfire hazard management area on the adjacent Council land.**

**All work required by this condition must be undertaken in accordance with the approved SWMP.**

*Advice: Once the SWMP has been approved, the Council will issue a condition endorsement (see general advice on how to obtain condition endorsement).*

*Where building approval is also required, it is recommended that documentation for condition endorsement be submitted well before submitting documentation for building approval. Failure to address condition endorsement requirements prior to submitting for building approval may result in unexpected delays.*

Reason for condition

To avoid the pollution and sedimentation of roads, drains and natural watercourses that could be caused by erosion and runoff from the development.

## **OPS 2**

**A Bushfire Hazard Management Area (BHMA) must be established on the Council reserve Strickland Avenue no. 5, as specified in the approved Bushfire Hazard Management Plan, prior to occupancy. All costs associated with the establishment of the BHMA will be borne by the applicant.**

**Upon establishment of the BHMA to the satisfaction of the Council, the Council will assume responsibility for the ongoing maintenance of the BHMA, as part of the urban firebreaks program.**

### Reason for condition

To ensure that the approved Bushfire Hazard Management Plan is implemented in a timely manner, and to the satisfaction of the Council, providing for the safety of inhabitants of the proposed dwelling.

### ADVICE

The following advice is provided to you to assist in the implementation of the planning permit that has been issued subject to the conditions above. The advice is not exhaustive and you must inform yourself of any other legislation, by-laws, regulations, codes or standards that will apply to your development under which you may need to obtain an approval. Visit the Council's [website](#) for further information.

Prior to any commencement of work on the site or commencement of use the following additional permits/approval may be required from the Hobart City Council.

### CONDITION ENDORSEMENT ENGINEERING

All engineering drawings required to be submitted and approved by this planning permit must be submitted to the City of Hobart as a CEP (Condition Endorsement) via the City's [Online Service Development Portal](#). When lodging a CEP, please reference the PLN number of the associated Planning Application. Each CEP must also include an estimation of the cost of works shown on the submitted engineering drawings. Once that estimation has been confirmed by the City's Engineer, the following fees are payable for each CEP submitted and must be paid prior to the City of Hobart commencing assessment of the engineering drawings in each CEP:

#### Value of Building Works Approved by Planning Permit Fee:

- Up to \$20,000: \$150 per application.
- Over \$20,000: 2% of the value of the works as assessed by the City's Engineer per assessment.

These fees are additional to building and plumbing fees charged under the Building and Plumbing Regulations.

Once the CEP is lodged via the [Online Service Development Portal](#), if the value of building works approved by your planning permit is over \$20,000, please contact the City's Development Engineer on 6238 2715 to confirm the estimation of the cost of works shown on the submitted engineering drawings has been accepted.

Once confirmed, please call one of the City's Customer Service Officers on 6238 2190 to make payment, quoting the reference number (ie. CEP number) of the Condition Endorsement you have lodged. Once payment is made, your engineering drawings will be assessed.

### **BUILDING PERMIT**

You may need building approval in accordance with the *Building Act 2016*. Click [here](#) for more information.

This is a Discretionary Planning Permit issued in accordance with section 57 of the *Land Use Planning and Approvals Act 1993*.

### **PLUMBING PERMIT**

You may need plumbing approval in accordance with the *Building Act 2016*, *Building Regulations 2016* and the National Construction Code. Click [here](#) for more information.

### **OCCUPATION OF THE PUBLIC HIGHWAY**

You may require a Permit to Open Up and Temporarily Occupy a Highway (for work in the road reserve). Click [here](#) for more information.

### **NEW SERVICE CONNECTION**

Please contact the Hobart City Council's City Infrastructure Division to initiate the application process for your [new stormwater connection](#).

## **STORM WATER**

Please note that in addition to a building and/or plumbing permit, development must be in accordance with the Hobart City Council's Hydraulic Services By law. Click [here](#) for more information.

## **WORK WITHIN THE HIGHWAY RESERVATION**

Please note development must be in accordance with the Hobart City Council's Highways By law. Click [here](#) for more information.

## **FEES AND CHARGES**

Click [here](#) for information on the Council's fees and charges.

## **DIAL BEFORE YOU DIG**

Click [here](#) for dial before you dig information.

## **PART 5 AGREEMENT**

Please note that the owner(s) of this property are subject to a Part 5 Agreement with Hobart City Council (C935042) that requires the owner(s) to:

- Implement the approved Bushfire Management Plan in relation to the land (superseded);
- Refrain from removing any tree on the land which has a circumference of more than 400mm measured one metre above the adjacent ground level unless that tree is within three metres of the outer wall of any building on the land that is approved by the Planning Authority or removal of the tree is necessary for safety reasons as determined and approved in writing by the Planning Authority (trees proposed to be removed on plans approved);
- Ensure no habitable building development occurs below the High Terrace
- Embankment Area on the land (proposal complies); and

- Ensure that any dwelling or fence on the land is constructed in accordance with the guidelines and recommendations of the document *Minimising the Swift Parrot Collision Threat: Guidelines and recommendations for parrot-safe building design*.

With regard to compliance with the swift parrot collision guidelines, it is recommended that the following occurs to avoid breaching the Agreement:

- low-reflectivity glass (<10% visible light reflectivity) is used wherever possible; and
- the clear glass balustrades are treated in accordance with the guidelines (frosted, tinted, patterned etc) or substituted with an alternative balustrade design (e.g. tension wire).

Copies of the Part 5 Agreement are available from The LIST website ([www.thelist.tas.gov.au](http://www.thelist.tas.gov.au)) via the 'Scanned Dealings' section.

## COUNCIL RESERVES

This permit does not authorise any works (other than for bushfire hazard management or stormwater connection as approved) on the adjoining Council land. Any act that causes, or is likely to cause, damage to Council's land may be in breach of Council's Public Spaces By-law and penalties may apply. The by-law is available [here](#).

**APPLICATION UNDER HOBART INTERIM PLANNING SCHEME 2015**

Type of Report: Committee  
Council: 14 January 2019  
Expiry Date: 18 January 2019  
Application No: PLN-18-493  
Address: 3 ERINDALE PLACE , SOUTH HOBART  
163 STRICKLAND AVENUE , SOUTH HOBART  
Applicant: Danny MacGregor  
3 ELDON STREET  
Proposal: Dwelling and Associated Vegetation Clearing  
Representations: No representations were received during the advertising period.  
Performance criteria: Part D 10.4.2 P3 - Building Envelope in the General Residential zone  
Part E 10.7.1 P1 - Building and works in the Biodiversity Areas code  
Part E 11.7.1 P1 - Building and works in the Waterways and Coastal Protection Areas code

---

**1. Executive Summary**

- 1.1 Planning approval is sought for a dwelling at 3 Erindale Place, South Hobart and works on Council-owned 163 Strickland Avenue, South Hobart. As the proposal involves Council property, it is to be determined by full Council.
- 1.2 More specifically the proposal is for:
- A two storey dwelling in the northern half of the site with a maximum height of 8.4m and a total floor area of 235m<sup>2</sup>.
  - The upper floor is comprised of a double garage, master bedroom with ensuite, laundry, and an open plan kitchen, dining and living area.
  - The lower floor is comprised of two bedrooms, one bathroom and a living area.
  - Clearing of vegetation on the site and on the adjoining Council reserve at 163 Strickland Avenue for bushfire hazard protection measures.
- 1.3 The proposal relies on performance criteria to satisfy the following standards and codes:
- 1.3.1 Zone Development Standards - Building Envelope  
1.3.2 Biodiversity Code

1.3.3 Waterway and Coastal Protection Code

1.3.4 Inundation Prone Areas Code

1.4 No representations were received during the statutory advertising period between 14 and 31 December 2018.

1.5 The proposal is recommended for approval subject to conditions.

1.6 The final decision is delegated to full Council.

## 2. Site Detail

- 2.1 The site is an internal lot located at the western end of Erindale Place, some 40m from the junction of Woodlyn Court and Erindale Place, South Hobart. The site is a currently vacant and south east facing lot, sloping down to a tributary of the Hobart Rivulet, which traverses the lot some 16m from the building site. The lot adjoins an existing residential dwelling to the north, with a vacant residential lot to the east and a pocket of native bushland owned and managed by Council to the south and west.

Figure 1: location of the subject site at 3 Erindale Place, South Hobart (outlined in blue).

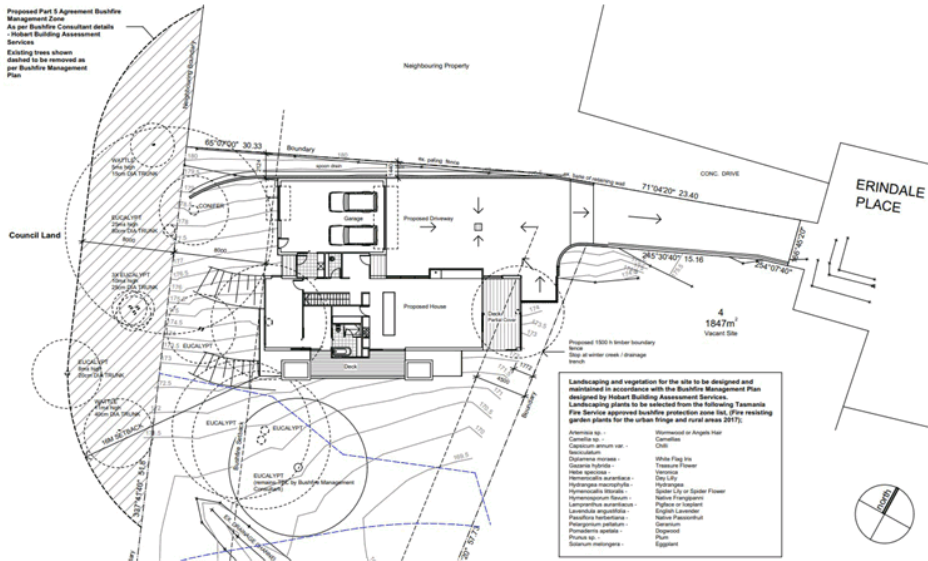

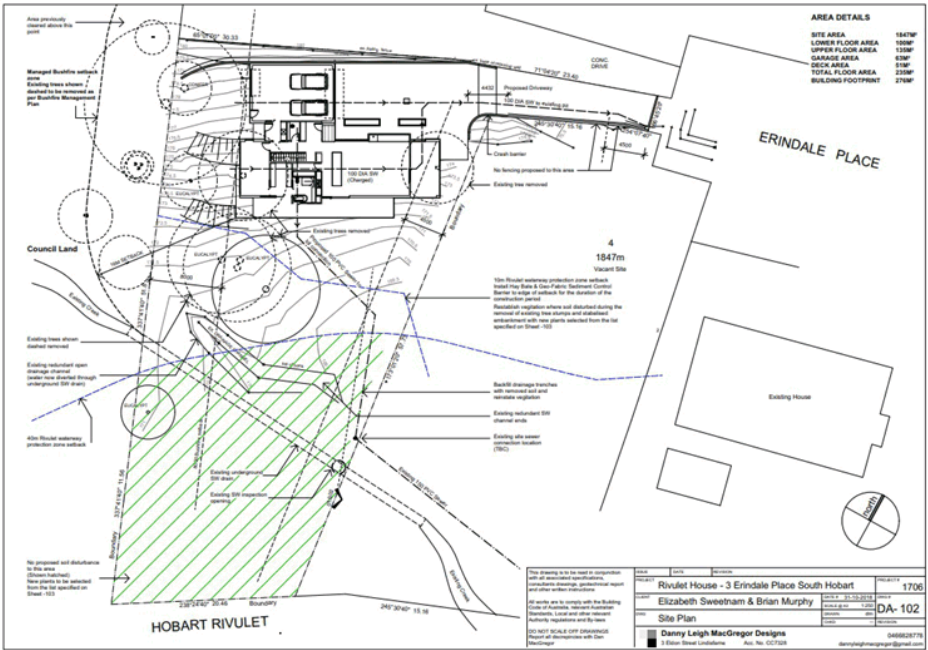

The site falls some 11m over a distance of approximately 60m. Figure 2 below shows the location of the tributary and Hobart Rivulet on the southern section of the lot. The property contains Eucalypt species, linking to the Council owned land to the west, although the building site is partially cleared.

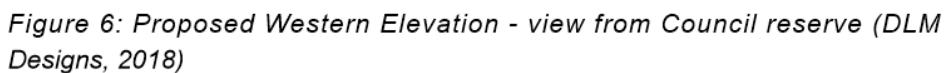

Figure 2: the subject site at 3 Erindale Place, South Hobart (outlined in blue).

### 3. Proposal

- 3.1 Planning approval is sought for a Single Dwelling at 3 Erindale Place, South Hobart and associated vegetation clearing on Council owned land at 163 Strickland Avenue, South Hobart.
- 3.2 More specifically the proposal is for:
- A two storey dwelling in the northern half of the site with a maximum height of 8.4m and a total floor area of 235m<sup>2</sup>.
  - The upper floor is comprised of a double garage, master bedroom with ensuite, laundry, and an open plan kitchen, dining and living area.
  - The lower floor is comprised of two bedrooms, one bathroom and a living area.
  - The dwelling is cut into the hill slightly and faces south.
  - Clearing of vegetation on the site and 8m into adjoining Council reserve at 163 Strickland Avenue for bushfire hazard protection measures.

4.1 The subject lot was formed as part of subdivision permit PLN-08-01362-01, which required the owner to enter into a Part 5 Agreement with the Council, pursuant to the Land Use Planning and Approvals Act 1993 to manage the land in accordance with the approved Bushfire Management Plan. This Part 5 Agreement was entered into on 5 October 2009 and forms part of the title documentation submitted with this application.

**5. Concerns raised by representors**

- 5.1 No representations were received during the statutory advertising period between 14 and 31 December 2018. The advertising period was extended under S57 5AA of the Land Use Planning and Approvals Act 1993.

**6. Assessment**

- 6.1 The *Hobart Interim Planning Scheme 2015* is a performance based planning scheme. To meet an applicable standard, a proposal must demonstrate compliance with either an acceptable solution or a performance criterion. Where a proposal complies with a standard by relying on one or more performance criteria, the Council may approve or refuse the proposal on that basis. The ability to approve or refuse the proposal relates only to the performance criteria relied on.
- 6.2 The site is located within the General Residential Zone of the *Hobart Interim Planning Scheme 2015*.
- 6.3 The subject site is a vacant lot, and as such there is no existing use. The proposed use is a single dwelling. The proposed use is a no permit required use in the zone.
- 6.4 The proposal has been assessed against:
- 6.4.1 Part D - 10 General Residential Zone
  - 6.4.2 E6.0 Parking and Access Code
  - 6.4.3 E7.0 Stormwater Management Code
  - 6.4.4 E10.0 Biodiversity Code
  - 6.4.5 E11.0 Waterway and Coastal Protection Code
  - 6.4.6 E15.0 Inundation Prone Areas Code
- 6.5 The proposal relies on the following performance criteria to comply with the applicable standards:
- 6.5.1 General Residential Zone - Building Envelope – Part D 10.4.2 P3
  - 6.5.2 Biodiversity Code - Buildings and Works – Part E 10.7.1 P1

6.5.3 Waterway and Coastal Protection Code - Buildings and Works – Part E  
11.7.1 P1

6.6 Each performance criterion is assessed below.

6.7 General Residential zone - Part D 10.4.2 - Building Envelope

6.7.1 The acceptable solution at clause 10.4.2.A3 requires buildings to be sited within a prescribed building envelope, which in this instance requires a 4.5m setback to the eastern lot boundary, excluding the access leg.

6.7.2 The proposal includes an eastern boundary setback of 1.77m, excluding the access leg.

6.7.3 The proposal does not comply with the acceptable solution; therefore assessment against the performance criterion is relied on.

6.7.4 The performance criterion at clause 10.4.2.P3 provides as follows:

*The siting and scale of a dwelling must:*

*(a) not cause unreasonable loss of amenity by:*

*(i) reduction in sunlight to a habitable room (other than a bedroom) of a dwelling on an adjoining lot; or*

*(ii) overshadowing the private open space of a dwelling on an adjoining lot; or*

*(iii) overshadowing of an adjoining vacant lot; or*

*(iv) visual impacts caused by the apparent scale, bulk or proportions of the dwelling when viewed from an adjoining lot; and*

*(b) provide separation between dwellings on adjoining lots that is compatible with that prevailing in the surrounding area.*

6.7.5 The dwelling adjoins two residential lots and the Council owned reserve within the Open Space zone. The adjoining residential lot to the east is vacant. The adjoining residential lot to the north contains a single dwelling. Adjoining open space lots to the south and west are natural bushland.

The dwelling is sited in the northern half of the lot to avoid site constraints including the need for buffer distances from Hobart Rivulet. The dwelling has also been sited within a slight cutting and has been designed to the slope of the land in order to resemble a single storey split level

structure. When viewed from adjoining lots, the siting and building design, including articulation, transitioning of height and materials pallet will serve to reduce the visual impact of the dwelling by reducing the apparent height and bulk.

Shadow diagrams indicate that significant overshadowing of the adjoining eastern lot currently occurs due to the topographic features of the spur along Old Farm Road. The increased overshadowing created by the proposed dwelling is not substantially more than existing on 21st June. Notwithstanding this, given that more than 3 hours of sunlight will still be available to all adjoining lots, overshadowing is considered to be minimal. The overshadowing is a result of the need to locate the building in the northern half of the lot to avoid site constraints around the watercourse within the lower section of the site.

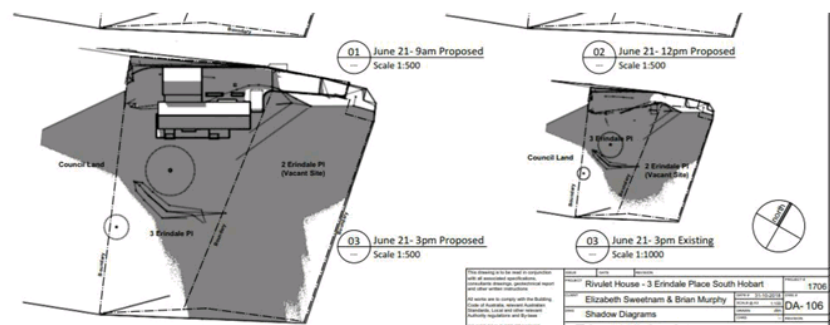

Figure 7: Shadow diagrams - 3pm 21st June Existing (right) and Proposed (DLM Designs, 2018)

Separation distances between dwellings in the surrounding area is variable. Dwellings at 4 and 5 Erindale Place are separated by approximately 8m. Dwellings at 5 and 6 Erindale Place are separated by approximately 7m. Dwellings at 1 Erindale Place and 2 Woodlyn Court are separated by approximately 2.5m. The adjoining residential lot to the north of the site contains an existing dwelling.

Figure 8: Surrounding development (Geo Cortex, 2018)

The proposed development will achieve approximately 15m separation distance from the existing dwelling to the north. Number 2 Erindale Place, the adjoining residential lot to the east, is vacant. The proposed development is set back approximately 2.5m from that mutual boundary. The proposed separation distances are therefore generally consistent with those prevailing in the area.

6.7.6 The proposal complies with the performance criterion.

6.8 Biodiversity Code - Part E 10.7.1 P1 - Buildings and Works

6.8.1 The acceptable solution at clause 10.7.1.A1 requires clearing of vegetation to be within a defined building area on a plan of subdivision. The adjacent Council land to the west is within a Biodiversity Protection Area and modification of the vegetation on that land is proposed to establish a bushfire hazard management area. The residential lot is not within a Biodiversity Protection Area.

6.8.2 Therefore the proposal includes clearing of vegetation that is not within a defined building area on a plan of subdivision.

6.8.3 The proposal does not comply with the acceptable solution; therefore assessment against the performance criterion is relied on.

6.8.4 The relevant performance criterion at clause 10.7.1.P1 provides as follows:

*Clearance and conversion or disturbance must satisfy the following:*

*(b) if moderate priority biodiversity values:*

- (i) development is designed and located to minimise impacts, having regard to constraints such as topography or land hazard and the particular requirements of the development;*
- (ii) impacts resulting from bushfire hazard management measures are minimised as far as reasonably practicable through siting and fire-resistant design of habitable buildings;*
- (iii) remaining moderate priority biodiversity values on the site are retained and improved through implementation of current best practice mitigation strategies and ongoing management measures designed to protect the integrity of these values;*

6.8.5 The Council's Environmental Development Planner has provided the following assessment (the officer's full assessment is attached to this report):

The submitted documents indicate that twelve trees are proposed to be removed. These include six small *Eucalyptus obliqua* (stringybark) and *Acacia dealbata* (silver wattle) and one large *Eucalyptus obliqua* within the biodiversity protection area. Understorey modification is also proposed for the bushfire hazard management area on the adjacent Council land. Three *Eucalyptus globulus* (blue gum) would be removed from the residential lot.

A natural values assessment was submitted with the application. The main findings of the assessment were:

- The vegetation at 3 Erindale Place is best classified as urban areas (TASVEG code: FUR) because of the high level of disturbance, with some parts marginally classifiable as a wet sclerophyll mapping unit, either '*Eucalyptus globulus* wet forest' (WGL) or '*Eucalyptus obliqua* forest with broad-leaf shrubs' (WOB).
- The adjacent Council-owner land to the west of the title supports wet sclerophyll forest that is transitional between '*Eucalyptus globulus* wet forest' (WGL) or '*Eucalyptus obliqua* forest with broad-leaf shrubs' (WOB), with perhaps a slight favour to WGL over WOB because of a few larger canopy trees of *Eucalyptus globulus*.
- Database information and site assessment did not indicate the

presence of any flora or fauna species listed as threatened.

- Database information (and site assessment did not indicate the presence of any fauna species listed as threatened.
- The lot provides potential habitat for a suite of threatened species, however it is not considered significant habitat as it is for ubiquitous and widespread species such as the Tasmanian devil, spotted-tailed quoll, eastern quoll, eastern barred bandicoot, grey goshawk. The absence of hollow-bearing trees precludes the site providing potential nesting habitat for several species (e.g. masked owl, swift parrot). The highly modified understorey and absence of key indicator species precludes the presence of threatened invertebrate species (e.g. chaostola skipper, ammonite snail). The site may be marginally suitable for the Mt Mangana stag beetle (within range) but the absence of large logs (presumably due to fire history and time since last fire) suggests the species is highly unlikely to be present.
- The lot (and adjacent area) does support *Eucalyptus globulus* (blue gum), which is recognised as a foraging resource for the swift parrot. The contribution made by individual trees, patches and larger areas of blue gums to the overall foraging resource for the swift parrot would vary considerably between years and within seasons.

The report concluded that the impact of the proposed development on biodiversity values would be low and made no recommendations for mitigation measures.

The relevant Code standards are under clause E10.7.1 'Buildings and Works'. The proposal does not comply with acceptable solution A1 because the vegetation community affected (*'Eucalyptus globulus* wet forest') is specified as being a 'moderate' priority biodiversity value in Table E10.1 of the Code. In addition, the submitted natural values assessment classifies the vegetation as being of 'moderate' priority as potential foraging habitat for swift parrots. Despite this, it is important to note that no *Eucalyptus globulus* would be removed from the land within the Biodiversity Protection Area (the adjacent Council land) with all blue gums proposed for removal being located on the residential lot.

The proposed dwelling has been sited in the north-eastern corner of the lot reducing the development's impact upon the native vegetation to the south and west. The dwelling would be constructed to BAL-29 specification reducing the extent of the bushfire hazard management

area. The degree of tree clearing is considered reasonable given their proximity to the proposed dwelling.

The remaining vegetation on the Council land is in relatively good condition and will be managed by Council.

6.8.6 The proposal complies with the performance criterion.

6.9 Wetlands and Coastal Protection code - Part E 11.7.1 P1 - Buildings and Works

6.9.1 The acceptable solution at clause 11.7.1.A1 requires works within a waterway and coastal protection area to be within a building area on a plan of subdivision.

6.9.2 The proposal includes works within the waterway protection area that are not within a building area on a plan of subdivision.

6.9.3 The proposal does not comply with the acceptable solution; therefore assessment against the performance criterion is relied on.

6.9.4 The performance criterion at clause 11.7.1.P1 provides as follows:

*Building and works within a Waterway and Coastal Protection Area must satisfy all of the following:*

*(a) avoid or mitigate impact on natural values;*

*(b) mitigate and manage adverse erosion, sedimentation and runoff impacts on natural values;*

*(c) avoid or mitigate impacts on riparian or littoral vegetation;*

*(d) maintain natural streambank and streambed condition, (where it exists);*

*(e) maintain in-stream natural habitat, such as fallen logs, bank overhangs, rocks and trailing vegetation;*

*(f) avoid significantly impeding natural flow and drainage;*

*(g) maintain fish passage (where applicable);*

*(h) avoid landfilling of wetlands;*

*(i) works are undertaken generally in accordance with 'Wetlands and Waterways Works Manual' (DPIWE, 2003) and "Tasmanian Coastal Works Manual" (DPIPWE, Page and Thorp, 2010), and the unnecessary use of machinery within watercourses or wetlands is avoided.*

- 6.9.5 The Council's Environmental Development Planner has provided the following assessment (the officer's full assessment is attached to this report):

Several *Eucalyptus globulus* would be removed from within the WPA, however this is required for the dwelling's bushfire hazard management area, being so close to the proposed dwelling. The Hazard Management Area (HMA) shown on the submitted Bushfire Hazard Management Plan (BHMP) does, however, extend to the southern boundary of the lot which is in excess of what is required under AS3959 (16m). It is therefore recommended that a condition be applied to any permit granted prohibiting the removal of native vegetation beyond the required 16m HMA (except where required to install the sewer line).

The drainage channel supports few natural values and carries little flow. No significant impacts on natural values are expected.

- 6.9.6 The proposal complies with the performance criterion.

## 7. Discussion

- 7.1 Planning approval is sought for a Dwelling at 3 Erindale Place, South Hobart.
- 7.2 The application was advertised and no representations were received.
- 7.3 The Council's Environmental Development Planner has provided additional comments as follows:

The owner(s) of this property are subject to a Part 5 Agreement with Hobart City Council (C935042) that requires the owner(s) to:

- Implement the approved Bushfire Management Plan in relation to the land;
- Refrain from removing any tree on the land which has a circumference of more than 400mm measured one metre above the adjacent ground level unless that tree is within three metres of the outer wall of any building on the land that is approved by the Planning Authority or removal of the tree is necessary for

safety reasons as determined and approved in writing by the Planning Authority;

- Ensure no habitable building development occurs below the High Terrace Embankment Area on the land; and
- Ensure that any dwelling or fence on the land is constructed in accordance with the guidelines and recommendations of the document Minimising the Swift Parrot Collision Threat: Guidelines and recommendations for parrot-safe building design.

The BHMP approved for the subdivision is out of date and can no longer be used to satisfy the Building Regulations 2016. An alternative certified BHMP was submitted with the application.

Several trees on the lot with a trunk diameter exceeding 400mm are proposed to be removed. The removal of these is considered necessary to establish an effective bushfire hazard management area as they are close, or within, the proposed building footprint.

The proposed building would be above the high terrace embankment.

The proposed dwelling design is largely consistent with the swift parrot collision guidelines, however a glass balustrade is proposed for the upper level deck.

Commentary regarding bird-strike risk was included in the submitted natural values report. The report states the following:

*The elevation-by-elevation and window-by-window analysis of the risk of window-strike by birds (particularly the swift parrot) has demonstrated a generally low risk, and only minor mitigation is recommended (i.e. low reflectance glass on some windows only).*

Advice is recommended for any permit granted recommending the use of low-reflectivity glazing and substituting or treating any clear glass balustrades to ensure compliance with the Agreement.

- 7.4 The proposal has been assessed against the relevant provisions of the planning scheme and is considered to perform well.
- 7.5 The proposal has been assessed by other Council officers, including the Council's Development Engineer, Environmental Development Planner, and Parks Planner. The officers have raised no objection to the proposal, subject to conditions.

7.6 The proposal is recommended for approval.

**8. Conclusion**

8.1 The proposed Dwelling at 3 Erindale Place, South Hobart satisfies the relevant provisions of the *Hobart Interim Planning Scheme 2015*, and as such is recommended for approval.

**9. Recommendations**

That: Pursuant to the *Hobart Interim Planning Scheme 2015*, the Council approve the application for Dwelling at 3 Erindale Place, South Hobart. for the reasons outlined in the officer's report and a permit containing the following conditions be issued:

**GEN**

**The use and/or development must be substantially in accordance with the documents and drawings that comprise PLN-18-493 3 ERINDALE PLACE SOUTH HOBART TAS 7004 - Final Planning Documents except where modified below.**

Reason for condition

To clarify the scope of the permit.

**PLN s3**

**The title boundary shared between Council's neighbouring land and the applicant's property shall be clearly marked by the applicant on the ground before any works commence.**

Reason for conditions:

To clarify the scope of the permit.

**ENG sw4**

**The new storm water connection must be constructed and existing abandoned connections sealed by the Council at the owner's expense, prior to the first occupation.**

**Detailed engineering drawings must be submitted and approved, prior to commencement of work. The detailed engineering drawings must include:**

1. **the location of the proposed connection; and**
2. **the size of the connection appropriate to satisfy the needs of the development.**

**All work required by this condition must be undertaken in accordance with the**

approved detailed engineering drawings.

*Advice:*

- *The applicant is advised to submit detailed design drawings via a Council City Infrastructure Division [application for a new stormwater connection](#). If detailed design to satisfy this condition is submitted via the planning condition endorsement process there may be fees associated with the assessment, and once approved the applicant will still need to submit an application for a new stormwater connection with Council City Infrastructure Division.*
- *Where building / plumbing approval is also required, it is recommended that documentation to satisfy this condition is submitted well before submitting documentation for building/plumbing approval. Failure to address planning condition requirements prior to submitting for building/plumbing approval may result in unexpected delays.*

Reason for condition

To ensure the site is drained adequately.

#### **ENG 2b**

**Prior to the issue of any approval under the *Building Act 2016* or the commencement of works on site (whichever occurs first), a certified vehicle barrier design (including site plan with proposed location(s) of installation) prepared by a suitably qualified engineer, compliant with Australian Standard AS/NZS1170.1:2002, must be submitted to Council.**

*Advice:*

- *If the development's building approval includes the need for a Building Permit from Council, the applicant is advised to submit detailed design of vehicular barrier as part of the Building Application.*  
*If the development's building approval is covered under Notifiable Work the applicant is advised to submit detailed design of vehicular barrier as a condition endorsement of the planning permit condition. Once the certification has been accepted, the Council will issue a condition endorsement (see general advice on how to obtain condition endorsement).*

Reason for condition

To ensure the safety of users of the access driveway and parking module and compliance with the standard.

**ENG 2c**

**Prior to the first occupation, vehicular barriers must be inspected by a qualified engineer and certification submitted to the Council confirming that the installed vehicular barriers comply with the certified design and Australian Standard AS/NZS1170.1:2002.**

*Advice:*

- *Certification may be submitted to the Council as part of the Building Act 2016 approval process or via condition endorsement (see general advice on how to obtain condition endorsement)*

## Reason for condition

To ensure the safety of users of the access driveway and parking module and compliance with the relevant standards.

**ENG 1**

**Any damage to council infrastructure resulting from the implementation of this permit, must, at the discretion of council:**

1. **Be met by the owner by way of reimbursement (cost of repair and reinstatement to be paid by the owner to council); or**
2. **Be repaired and reinstated by the owner to the satisfaction of Council.**

**A photographic record of the Council's infrastructure adjacent to the subject site must be provided to the Council prior to any commencement of works.**

**A photographic record of the Council's infrastructure (e.g. existing property service connection points, roads, buildings, stormwater, footpaths, driveway crossovers and nature strips, including if any, pre-existing damage) will be relied upon to establish the extent of damage caused to the Council's infrastructure during construction. In the event that the owner/developer fails to provide to the Council a photographic record of the Council's infrastructure, then any damage to the Council's infrastructure found on completion of works will be deemed to be the responsibility of the owner.**

## Reason for condition

To ensure that any of the Council's infrastructure and/or site-related service connections affected by the proposal will be altered and/or reinstated at the owner's full cost.

**ENV 10**

**No native vegetation may be removed from 3 Erindale Place more than 16m from the southern edge of the dwelling, unless required for the installation of the sewer line.**

Reason for condition

To ensure the use/development does not result in unnecessary or unacceptable loss of priority biodiversity values

**ENV 15**

**All construction vehicles and machinery must be effectively cleaned of soil both before entering and before leaving the property.**

**Soil cleaned from construction vehicles and machinery must not be allowed, either directly or indirectly, to enter waterways or the Council's stormwater system.**

*Note: further information on effective measures for washdown can be found [here](#).*

Reason for condition

To minimise the spread of weeds and pathogens.

**ENV 2**

**Sediment and erosion control measures, in accordance with an approved soil and water management plan (SWMP), must be installed prior to the commencement of work and maintained until such time as all disturbed areas have been stabilised and/or restored or sealed to the Council's satisfaction.**

**A SWMP must be submitted prior to the issue of any approval under the Building Act 2016 or the commencement of work, whichever occurs first. The SWMP must be prepared in accordance with the Soil and Water Management on Building and Construction Sites fact sheets (Derwent Estuary Program, 2008), available [here](#).**

**Particular attention must be given to managing erosion and sedimentation risk when establishing the bushfire hazard management area on the adjacent Council land.**

**All work required by this condition must be undertaken in accordance with the approved SWMP.**

*Advice: Once the SWMP has been approved, the Council will issue a condition endorsement (see general advice on how to obtain condition endorsement).*

*Where building approval is also required, it is recommended that documentation for condition endorsement be submitted well before submitting documentation for building approval. Failure to address condition endorsement requirements prior to submitting for building approval may result in unexpected delays.*

Reason for Condition

To avoid the pollution and sedimentation of roads, drains and natural watercourses that could be caused by erosion and runoff from the development.

## **OPS 2**

**A Bushfire Hazard Management Area (BHMA) must be established on the Council reserve Strickland Avenue no. 5, as specified in the approved Bushfire Hazard Management Plan, prior to occupancy. All costs associated with the establishment of the BHMA will be borne by the applicant.**

**Upon establishment of the BHMA to the satisfaction of the Council, the Council will assume responsibility for the ongoing maintenance of the BHMA, as part of the urban firebreaks program.**

Reason for condition

To ensure that the approved Bushfire Hazard Management Plan is implemented in a timely manner, and to the satisfaction of the Council, providing for the safety of inhabitants of the proposed dwelling.

## **ADVICE**

The following advice is provided to you to assist in the implementation of the planning permit that has been issued subject to the conditions above. The advice is not exhaustive and you must inform yourself of any other legislation, by-laws, regulations, codes or standards that will apply to your development under which you may need to obtain an approval. Visit the Council's [website](#) for further information.

Prior to any commencement of work on the site or commencement of use the following additional permits/approval may be required from the Hobart City Council.

## CONDITION ENDORSEMENT ENGINEERING

All engineering drawings required to be submitted and approved by this planning permit must be submitted to the City of Hobart as a CEP (Condition Endorsement) via the City's [Online Service Development Portal](#). When lodging a CEP, please reference the PLN number of the associated Planning Application. Each CEP must also include an estimation of the cost of works shown on the submitted engineering drawings. Once that estimation has been confirmed by the City's Engineer, the following fees are payable for each CEP submitted and must be paid prior to the City of Hobart commencing assessment of the engineering drawings in each CEP:

### Value of Building Works Approved by Planning Permit Fee:

- Up to \$20,000: \$150 per application.
- Over \$20,000: 2% of the value of the works as assessed by the City's Engineer per assessment.

These fees are additional to building and plumbing fees charged under the Building and Plumbing Regulations.

Once the CEP is lodged via the [Online Service Development Portal](#), if the value of building works approved by your planning permit is over \$20,000, please contact the City's Development Engineer on 6238 2715 to confirm the estimation of the cost of works shown on the submitted engineering drawings has been accepted.

Once confirmed, please call one of the City's Customer Service Officers on 6238 2190 to make payment, quoting the reference number (ie. CEP number) of the Condition Endorsement you have lodged. Once payment is made, your engineering drawings will be assessed.

## BUILDING PERMIT

You may need building approval in accordance with the *Building Act 2016*. Click [here](#) for more information.

This is a Discretionary Planning Permit issued in accordance with section 57 of the *Land Use Planning and Approvals Act 1993*.

## PLUMBING PERMIT

You may need plumbing approval in accordance with the *Building Act 2016*, *Building Regulations 2016* and the National Construction Code. Click [here](#) for more information.

**OCCUPATION OF THE PUBLIC HIGHWAY**

You may require a Permit to Open Up and Temporarily Occupy a Highway (for work in the road reserve). Click [here](#) for more information.

**NEW SERVICE CONNECTION**

Please contact the Hobart City Council's City Infrastructure Division to initiate the application process for your [new stormwater connection](#).

**STORM WATER**

Please note that in addition to a building and/or plumbing permit, development must be in accordance with the Hobart City Council's Hydraulic Services By law. Click [here](#) for more information.

**WORK WITHIN THE HIGHWAY RESERVATION**

Please note development must be in accordance with the Hobart City Council's Highways By law. Click [here](#) for more information.

**FEES AND CHARGES**

Click [here](#) for information on the Council's fees and charges.

**DIAL BEFORE YOU DIG**

Click [here](#) for dial before you dig information.

**PART 5 AGREEMENT**

Please note that the owner(s) of this property are subject to a Part 5 Agreement with Hobart City Council (C935042) that requires the owner(s) to:

- Implement the approved Bushfire Management Plan in relation to the land (superseded);
- Refrain from removing any tree on the land which has a circumference of more than 400mm measured one metre above the adjacent ground level unless that tree is within three metres of the outer wall of any building on the land that is approved by the Planning Authority or removal of the tree is necessary for safety reasons as determined and approved in writing by the Planning Authority (trees proposed to be removed on plans approved);
- Ensure no habitable building development occurs below the High Terrace Embankment Area on the land (proposal complies); and

- Ensure that any dwelling or fence on the land is constructed in accordance with the guidelines and recommendations of the document *Minimising the Swift Parrot Collision Threat: Guidelines and recommendations for parrot-safe building design*.

With regard to compliance with the swift parrot collision guidelines, it is recommended that the following occurs to avoid breaching the Agreement:

- low-reflectivity glass (<10% visible light reflectivity) is used wherever possible; and
- the clear glass balustrades are treated in accordance with the guidelines (frosted, tinted, patterned etc) or substituted with an alternative balustrade design (e.g. tension wire).

Copies of the Part 5 Agreement are available from The LIST website ([www.thelist.tas.gov.au](http://www.thelist.tas.gov.au)) via the 'Scanned Dealings' section.

## **COUNCIL RESERVES**

This permit does not authorise any works (other than for bushfire hazard management or stormwater connection as approved) on the adjoining Council land. Any act that causes, or is likely to cause, damage to Council's land may be in breach of Council's Public Spaces By-law and penalties may apply. The by-law is available [here](#).

Dear Mr McGregor

**NOTICE OF LAND OWNER CONSENT TO  
LODGE A PLANNING APPLICATION**Site Address: **3 Erindale Place, South Hobart and 163 Strickland  
Ave, South Hobart  
(Council land)**Description of Proposal: **Firebreak / Hazard Management Area on Council  
land for development of single dwelling on private  
land**Applicant Name: **Dan McGregor, Building Designer**PLN **Request prior to lodgement of planning  
application**

I write to advise that pursuant to Section 52 of the *Land Use Planning and Approvals Act 1993*, I grant my consent on behalf of the Hobart City Council as the owner/administrator of the above land for you to make application to the City for a planning permit for the development described above and as per the attached documents.

Please note that the granting of the consent is only for the making of the application and in no way should such consent be seen as prejudicing any decision the Council is required to make as the statutory planning authority or as the owner/administrator of the land.

Yours faithfully

(N D Heath)

PLN **Request prior to lodgement of planning application**

The land indicated above is owned or is administered by the Hobart City Council.

The applicant proposes to lodge an application for a permit, pursuant to the *Land Use Planning and Approvals Act 1993*, in respect to the proposal described above.

Part or all of the application proposes use and/or development on land owned or administered by the City located at (as shown on the attached plans).  
Being and as General Manager of the Hobart City Council, I provide written permission to the making of the application pursuant to Section 52(1B)(b) of the *Land Use Planning and Approvals Act 1993*.

  
(N D Heath)**GENERAL MANAGER**Date: 7/9/18

**This consent is for the making of a planning application only, and does not constitute landlord consent for the development to occur.**

**Attachment 1: Bushfire Hazard Management Plan**

## Disclaimer:

AS 3959-2009 cannot guarantee that a dwelling will survive a bushfire attack, however the implementation of the measures contained within AS 3959-2009, this report and accompanying plan will improve the likelihood of survival of the structure. This report and accompanying plan are based on the conditions prevailing at the time of assessment. No responsibility can be accepted to actions by the land owner, governmental or other agencies or other persons that compromise the effectiveness of this plan. The contents of this plan are based on the requirements of the legislation prevailing at the time of report.

## 1. Summary:

This Bushfire Risk Assessment has been prepared to support the design and construction of a new dwelling at 3 Erindale Place, South Hobart. The site has been deemed to be bushfire prone due to its proximity to the area of bushfire prone vegetation on, as well as to the north and north east of the property.

This report has been prepared in conjunction with the design plans provided by the designer and this report must be read in conjunction with the specifications contained in those plans.

This report identifies the protective features and controls that must be incorporated into the construction works to ensure compliance with the standards. Fire management solutions are as defined in AS 3959-2009 Construction of Buildings in Bushfire Prone Areas, National Construction Code (Volume 2), E 1.0 Bushfire-Prone Areas Code and the Tasmania Fire Service publication Guidelines for Development in Bushfire Prone Areas 2005.

Provided construction standards for BAL 29 of AS 3959-2009 are incorporated into the new building works and the provision of the minimum defendable space specified in Table 1 and the Bushfire Hazard Management Plan being provided, the new building works are capable of compliance with the provisions of AS 3959-2009 and as a result, the bushfire risk is reduced.

Access to the site and water supply for fire fighting must comply with the requirements of Table 4.2 and Table 4.3A of the Directors Determination – Requirements for Building in Bushfire Prone Areas Version 2.1 dated 29 August 2017.

The effectiveness of the measures and recommendations detailed in this report and AS 3959-2009 are dependent on their implementation and maintenance for the life of the development or until the site characteristics that this assessment has been measured from alter from those identified. No liability can be accepted for actions by lot owners, Council or governmental agencies which compromise the effectiveness of this report.

This report has been prepared by Michael Westcott, Managing Director of Hobart Building Assessment Services. Michael is a building consultant in Tasmania and is accredited by the Tasmania Fire Service to prepare bushfire hazard management plans.

Site survey was carried out on 1<sup>st</sup> October 2017.

**2. Location:**

|                   |                                   |
|-------------------|-----------------------------------|
| Property Address: | 3 Erindale Place, South Hobart    |
| Owner:            | Elizabeth Sweetnam & Bryan Murphy |
| Title Reference:  | 161337/4                          |
| PID No:           | 3099843                           |
| Municipality:     | Hobart                            |

Figure 1: Site Location (Source The LIST)

### 3. Site Description

The property is situated at the end of Erindale Place, approximately 40 metres from the junction of Woodlyn Crescent and Erindale Place. The topography falls to the east at 6°. At the time of the assessment, vegetation to the west and south out to 100 metres from the proposed dwelling consisted of native eucalypt forest, however land to the north and east is considered managed.

There is a fire hydrant located on Erindale Place, within 120m of all sides of the proposed dwelling.

Planning controls are administered by Hobart City Council under the City of Hobart *Interim Planning Scheme 2016*. The site is zoned *General Residential*.

Figure 2: Site Plan

#### 4. Proposed Development:

A new dwelling is proposed for the site. Access to the dwelling is directly off Erindale Place.

#### Bushfire Attack Level (BAL) Assessment:

##### 5. Bushfire Assessment:

**Fire Danger Index (FDI):** The fire Index Rating for Tasmania is adopted as 50.

##### Vegetation Classification:

The predominant vegetation has been determined follows;

|                            |                          |
|----------------------------|--------------------------|
| North of development site: | Managed Land             |
| East of development site:  | Managed Land             |
| South of development site: | Classification A: Forest |
| West of development site:  | Classification A: Forest |

##### Gradient under predominant vegetation:

|         |              |
|---------|--------------|
| North : | Upslope      |
| East:   | Downslope 6° |
| South:  | Upslope      |
| West:   | Upslope      |

##### Distance to predominant vegetation:

|        |            |
|--------|------------|
| North: | N/A        |
| East:  | N/A        |
| South: | >16 metres |
| West:  | 16 metres  |

NOTE: Vegetation within the 100 metre assessment area to the south and west is unmanaged native trees and shrubs and has been assessed as **Classification A: Forest**.

Vegetation within the 100 metre assessment area to the north and east is managed residential land.

Predominant vegetation to the north – Managed Land

Predominant vegetation to the east – Managed Land

*583 Nelson Rd, Mt Nelson 7007 m 0407 796 978 e [mike@hbas.com.au](mailto:mike@hbas.com.au)*

Predominant vegetation to the south – Classification A: Forest

Predominant vegetation to the west – Classification A: Forest

**Bushfire Attack Level (BAL):**

Based on the predominant vegetation detailed above, and the separation distance EXISTING between the predominant vegetation and the development, the BAL for each elevation of the proposed dwelling has been assessed as follows:

|                  |        |
|------------------|--------|
| North elevation: | BAL FZ |
| East elevation:  | BAL FZ |
| South elevation: | BAL FZ |
| West elevation:  | BAL FZ |

Table 1. Details the hazard management areas required to comply with that BAL, and the area available for compliance:

|                                  | North                                 | East                                  | South  | West  |
|----------------------------------|---------------------------------------|---------------------------------------|--|---|
| <b>BAL</b>                       | BAL- 29                               | BAL- 29                               | BAL- 29  | BAL- 29   |
| <b>Vegetation Type</b>           | Managed Land                          | G(i) Grassland                        | A: Forest  | A: Forest   |
| <b>Slope</b>                     | Downslope 6.7°                        | Downslope 6°                          | Upslope  | Upslope   |
| Hazard Management Area Required  | N/A                                   | N/A                                   | 16-<23 metres  | 16-<23 metres   |
| Hazard Management Area Available | Area cleared and managed to boundary. | Area cleared and managed to boundary. | Area cleared and managed to 16 metres minimum from face of dwelling. | Area cleared and managed to 16 metres minimum from face of dwelling.  |
|                                  |                                       |                                       |  | Part 5 Agreement to be entered into with HCC to enable additional required 8 metre separation distance from boundary. |

Table 1: BAL Assessment and Hazard Management Area Requirements

## 6. Compliance:

All building works shall comply with the specifications for BAL 29 under Section 7 of AS 3959-2009.

### Maintenance Requirements: Hazard Management Areas

|  | NORTH   | EAST  | SOUTH   | SWEST   |
|--|---|---|---|---|
| <b>Hazard management area required</b> | N/A   | N/A   | Minimum of 16 metres from face of building                            | Minimum of 16 metres from face of building                            |
| <b>Management requirements</b>         | To the requirements of the Bushfire Hazard Management Plan (attached) | To the requirements of the Bushfire Hazard Management Plan (attached) | To the requirements of the Bushfire Hazard Management Plan (attached) | To the requirements of the Bushfire Hazard Management Plan (attached) |

Table 2. Maintenance requirements for Hazard Management Areas

Provided the management practices as described above are implemented, they will achieve the required hazard management areas. The continuation of these practices are sufficient to comply with this assessment. Any alteration to the current management practices or vegetation surrounding the site, within the prescribed management areas must comply with the following:

- Establishing non-flammable areas around the dwelling such as paths, patios, driveways, lawns, etc.
- Locating dams, orchards, vegetable gardens, effluent disposal areas, etc on the bushfire prone side of the building.
- Providing heat shields and ember traps on the bushfire prone side of the dwelling such as non flammable fencing, hedges, separated garden shrubs and small trees. Avoid the use of highly flammable plants.
- Ensure flammable materials such as wood piles, fuels and rubbish heaps are stored away from the dwelling.
- Replace highly flammable plants with low flammability species.
- Provide horizontal separation between tree crowns and vertical separation between ground fuels and overhead branches.
- Provide separation between significant trees such that groups are no greater than 20 metres in width and more than 20 metres from other groups of significant trees. Note that retention of some trees can screen a dwelling from windborne embers.
- Regular slashing or mowing of grass to a height of less than 100mm.

- Removal of ground fuels such as leaves, bark, fallen branches etc on a regular basis.
- Ensuring no trees overhang the dwelling so that vegetation falls onto the roof.

**Compliance with the Directors Determination Version 2.1 – Requirements for Building in Bushfire Prone Areas is achieved through implementation of the following:**

- **Table 4.2 Vehicular access:**

- The following design and construction requirements apply to property access:
- (a) All-weather construction;
- (b) Load capacity of at least 20 tonnes, including for bridges and culverts;
- (c) Minimum carriageway width of 4 metres;
- (d) Minimum vertical clearance of 4 metres;
- (e) Minimum horizontal clearance of 0.5 metres from the edge of the carriageway;
- (f) Cross falls of less than 3° (1:20 or 5%);
- (g) Dips less than 7° (1:8 or 12.5%) entry and exit angle;
- (h) Curves with a minimum inner radius of 10 metres;
- (i) Maximum gradient of 15° (1:3.5 or 28%) for sealed roads, and 10° (1:5.5 or 18%) for unsealed roads; and
- (j) Terminate with a turning area for fire appliances provided by one of the following:
  - (i) A turning circle with a minimum outer radius of 10 metres;
  - (ii) A property access encircling the building; or
  - (iii) A hammerhead “T” or “Y” turning head 4 metres wide and 8 metres long.
- As the private access road services 3 or more properties, Passing bays of 2 metres additional carriageway width and 20 metres length must be provided every 100 metres.

**The above requirements are not applicable to this property.**

- **Table 4.3A Water supply:**

- **A. Distance between building area to be protected and water supply:**
- The following requirements apply:
- (a) The building area to be protected must be located within 120 metres of a fire hydrant; and
- (b) The distance must be measured as a hose lay, between the fire fighting water point and the furthest part of the building area.
- (b) No closer than six metres from the building area to be protected; (c) With a minimum width of three metres constructed to the same standard as the carriageway; and
- (d) Connected to the property access by a carriageway equivalent to the standard of the property access.

- **7. Conclusions & Recommendations**

This Bushfire Risk Assessment and Bushfire Hazard Management Plan have been prepared support design and construction of a new dwelling at 3 Erindale Place, South Hobart. The report has reviewed the bushfire risks associated with the site and determined the fire management strategies that must be carried out to ensure the development on the site is at reduced risk from bushfire attack. Provided the elements detailed in this report are implemented, the development on the site is capable of compliance with AS-3959-2009 and the Tasmanian Fire Service Guidelines, any potential bushfire risk to the site is reduced.

**The new building works must comply with the requirements for BAL 29 of AS-3959-2009** as specified in Table 1 and part 5 of this report. The Council approval issued for the building works should contain conditions requiring that the protective elements defined in this report and AS-3959-2009 are implemented during the construction phase and maintained by the Lot owners for the life of the structure.

Although not mandatory, any increase in the construction standards above the assessed Bushfire Attack Level will afford improved protection from bushfire and this should be considered by the owner, designer and/or builder prior to construction commencing.

Hazard Management Areas must be established and maintained in a minimal fuel condition in accordance with this plan and the TFS guidelines. It is the owners responsibility to ensure the long term maintenance of the hazard management areas in accordance with the requirements of this report.

This report does not recommend or endorse the removal of any vegetation within, or adjoining the site for the purpose of bushfire protection without the explicit approval of the local authority.

A handwritten signature in black ink, appearing to read "Michael Westcott", with a horizontal line extending to the right.

Michael Westcott

## FOLIO PLAN RECORDER OF TITLES

Issued Pursuant to the Land Titles Act 1980

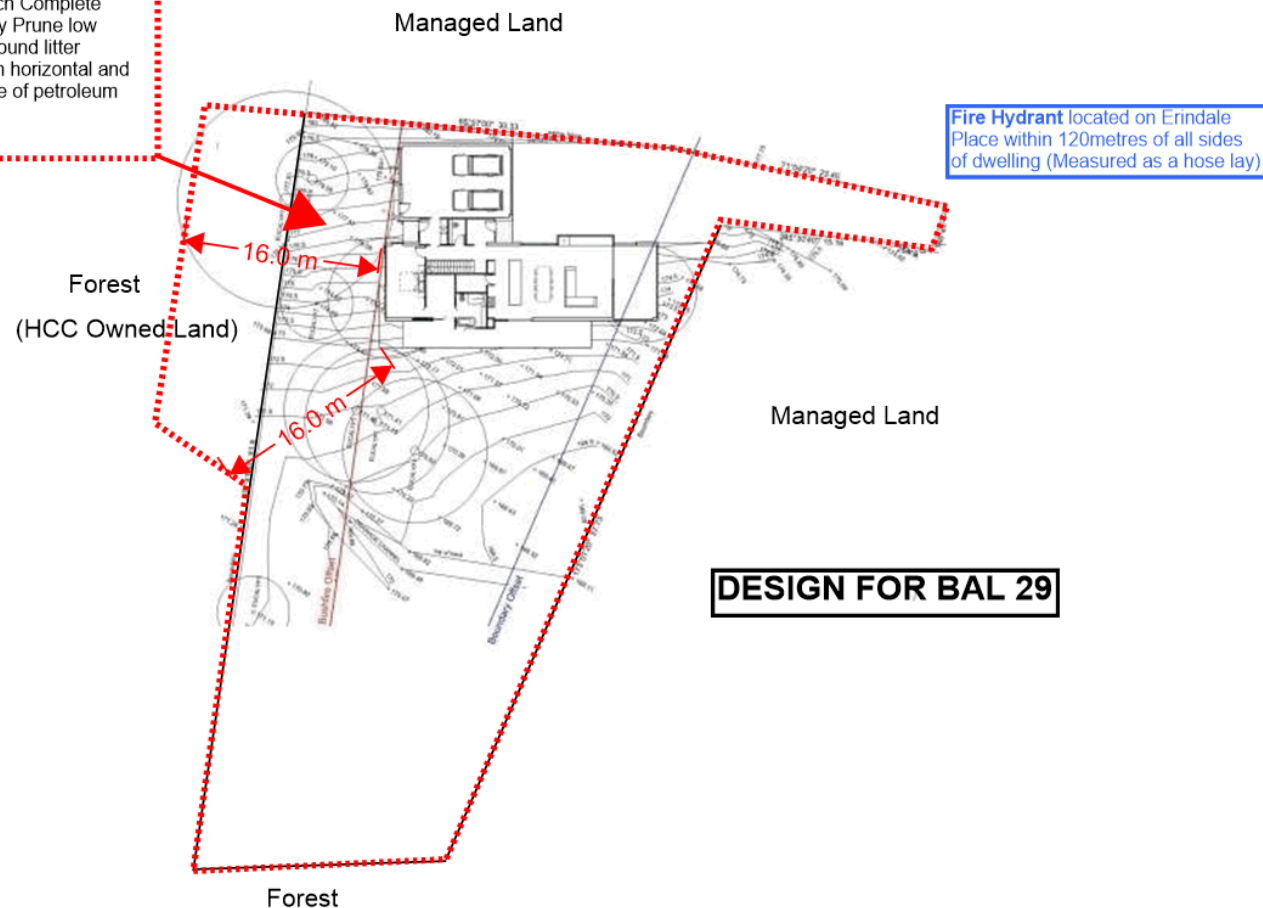

**HAZARD MANAGEMENT AREAS -**

Vegetation Management  
Vegetation in the Hazard Management Area (as dimensioned and shown) is to be managed and maintained in a **MINIMUM FUEL CONDITION**.

**Maintenance Schedule**

Removal of fallen limbs, leaf bark & litter  
Cut lawns short (less than 100mm) and maintain  
Remove pine bark and other flammable garden mulch  
Complete under-brushing and thin out the understorey  
Prune low hanging trees to ensure separation from ground litter  
Prune larger trees to establish and maintain horizontal and vertical canopy separation  
Minimise storage of petroleum fuels.

**EASEMENTS AND PROFITS**

Each lot on the plan is together with:-

- (1) such rights of drainage over the drainage easements shown on the plan (if any) as may be necessary to drain the stormwater and other surplus water from such lot; and
- (2) any easements or profits a prendre described hereunder.

Each lot on the plan is subject to:-

- (1) such rights of drainage over the drainage easements shown on the plan (if any) as passing through such lot as may be necessary to drain the stormwater and other surplus water from any other lot on the plan; and
- (2) any easements or profits a prendre described hereunder.

The direction of the flow of water through the drainage easements shown on the plan is indicated by arrows.

**Right of Carriageway**

~~Each and every Lot on the Plan is together with a right of carriage way over the right of way marked "ABCDEF" on P. 146939.~~

**Burdening Easement**

Each and every Lot on the Plan is subject to a burdening easement (to the extent that the below mentioned pipe traverses across that Lot) being the right of the Cascade Brewery Company Limited to have their three inch water pipe which runs from the Hobart Rivulet to the Cascade Brewery and passes through the Lots on the Plan, and maintained as at present with full rights of ingress, egress and regress for the purposes of renewing the same.

**Pipeline Easement**

Lot 5 is subject to a Pipeline Easement (appurtenant to Southern Water) over "PIPELINE EASEMENT 2.50 WIDE" shown passing through Lot 5 on the Plan.

| <b>ANNEXURE TO<br/>SCHEDULE OF EASEMENTS</b><br>PAGE 3 OF 9 PAGES  | Registered Number<br><b>SP 161337</b> |
| SUBDIVIDER: Todber Pty Ltd, Strategy Pty Ltd & Cascade Brewery Company Pty Ltd<br>FOLIO REFERENCE: 146939/2, 149634/1 & 247207/6 |                                       |

**Embankment Easement**

**Lots 15, 16, 17 and 18** on the Plan are subject to an Embankment Easement (appurtenant to the Hobart City Council) over the areas marked 'EMBANKMENT EASEMENT' on the said lots on the Plan.

**Restrictive Covenant**

The owners of **Lots 1, 3, 4, 14, 15, 16, 17 and 18** on the Plan covenant with the Hobart City Council to the intent that the burden of the covenant may run with and bind the covenantor's lot and any part thereof and the benefit shall be in favour of the Hobart City Council, to observe the following stipulation:

- (1) Not without the written consent of the Hobart City Council to erect or permit to be erected on the said lots any building structure or carry out and landscaping that may change the contours of the land or restrict the free flow of water over the land or cause erosion within 10 metres of the top of the bank of the existing course of the Hobart Rivulet.

The owners of **Lot 100 and Lot 105** on the Plan covenant with the Hobart City Council to the intent that the burden of the covenant runs with and binds the covenantor's Lot and any part thereof and the benefit shall be in favour of the Hobart City Council to observe the stipulation:

- (1) Not to erect or permit to be erected any building or buildings on the said Lots.

The owners of **Lot 1** on the Plan covenant with the Hobart City Council to the intent that the burden of the covenant may run with and bind the covenantor's lot and any part thereof and the benefit shall be in favour of the Hobart City Council, to observe the following stipulation:

1. Not to erect or construct any building or structure on the said lot without first obtaining a geotechnical assessment of any works proposed over any area of the lot which may have formed a part of the tributary course of the Hobart Rivulet.

**Fencing Provision**

In respect of any Lot on the Plan, the Vendors (Todber Pty Ltd & Strategy Pty Ltd) shall not be required to fence.

**NOTE:** Every annexed page must be signed by the parties to the dealing or where the party is a corporate body be signed by the persons who have attested the affixing of the seal of that body to the dealing.

## SCHEDULE OF EASEMENTS

RECORDER OF TITLES

Issued Pursuant to the Land Titles Act 1980

|  |                                      |
|--|--------------------------------------|
| <b>ANNEXURE TO<br/>SCHEDULE OF EASEMENTS</b><br>PAGE 4 OF 9 PAGES  | Registered Number<br><b>SP161337</b> |
| SUBDIVIDER: Todber Pty Ltd, Strategy Pty Ltd & Cascade Brewery Company Pty Ltd<br>FOLIO REFERENCE: 146939/2, 149634/1 & 247207/6 |                                      |

**Interpretation**

**"Southern Water"** means Tasmanian Water and Sewerage Corporation (Southern Region) Pty Limited, trading as Southern Water, established under the provisions of the Water and Sewerage Corporations Act 2008 (Tas).

**"Embankment Easement"** means the full and free right and liberty for the dominant tenement for the time being having the benefit of the easement over the lot(s) shown on the Plan to enter upon the land to carry out any works from time to time that may be necessary to retain and maintain the earthworks and drainage associated with a local highway as defined by the Local Government (Highways) Act 1982, but not precluding the servient tenement(s), subject to approval of the Local Authority, from constructing or erecting any structure on the land as required to provide access to any part of, or to maintain the stability of the servient lot(s).

**"Aurora Energy Pty Ltd"** means Aurora Energy Pty Ltd, ABN 85 082 464 622

**PIPELINE EASEMENT**

**"Easement Land"** means Lot 5 on the Plan

**"Transferee"** means Southern Water

**"Transferor"** means the registered proprietor for the time being of Lot 5

**"Pipeline Easement"** means the full right and liberty for the Transferee at all times to:

- a) enter upon the Easement Land with employees, contractors, agents and all other persons duly authorised by it and with machinery, vehicles, plant and equipment; and
- b) open, break up and excavate the Easement Land to lay and maintain on or in the Easement Land, sewer pipes, water pipes, valves and fittings for any purposes the Transferee may deem necessary; and
- c) run and pass sewerage and water through and along the same and from time to time to inspect, cleanse, repair and maintain the same and when and where necessary to lay new pipes, valves and fittings in substitution for and in addition to any other pipes, valves and fittings; and
- d) do all necessary works in connection with such activities or as may be authorised by any legislation:-

**NOTE:** Every annexed page must be signed by the parties to the dealing or where the party is a corporate body be signed by the persons who have attested the affixing of the seal of that body to the dealing.

| SUBDIVIDER: Todber Pty Ltd, Strategy Pty Ltd & Cascade Brewery Company Pty Ltd<br>FOLIO REFERENCE: 146939/2, 149634/1 & 247207/6 |                                      |

- i) without doing unnecessary damage to the Easement Land; and
- ii) leaving the Easement Land in a clean and tidy condition.

**PROVIDED ALWAYS THAT:**

- e) The Transferor must not without the written consent of the Transferee first had and obtained and only in compliance with the conditions which form the consent (if any):-
  - i) alter or permit to be altered the ground level of the Easement Land;
  - ii) erect or permit to be erected any building, structure, pipeline, paving, tree, shrub or other object on or in the Easement Land;
  - iii) remove any soil, rock or other matter that supports, protects or covers any works of the Transferee on or in the Easement Land;
  - iv) do or permit to be done any manner of thing which shall damage or contribute to damage or be likely to cause or contribute to damage to the sewer pipes, water pipes, valves and fittings laid now or later or constructed in or on the Easement Land; or
  - v) in any way prevent or interfere with the proper exercise and benefit of this easement by the Transferee or its employees, contractors, agents and all other persons duly authorised by it.
- f) The Transferee is not required to fence any part of the Easement Land.
- g) The Transferor shall be at liberty to erect any fence across the Easement Land wherever it may reasonably require the same provided that:
  - i) the Transferee shall be at liberty to provide in such a fence a gate suitable to its purposes; and
  - ii) the Transferor shall provide the Transferee with a key to any lock which would prevent the opening of any gate so provided.

**"Electricity Infrastructure Easement"**

**FIRSTLY** the full and free right and liberty for Aurora Energy Pty Ltd and its successors and their servants agents and contractors at all times hereafter:-

- (a) to clear the land marked "Pipeline and Electricity Infrastructure Easement" on the Plan (herein after called the Servient Land) and to erect construct, place, inspect, alter and repair, renew, maintain and use in upon and over and along and remove from the Servient Land towers poles, wires, cables, apparatus, appliances and other ancillary works (all of which are hereinafter collectively referred to as "the said lines") for the transmission and distribution of electrical energy and for purposes incidental thereto;
- (b) to cause or permit electrical energy to flow or be transmitted through and along the said lines;
- (c) to cut away remove and keep clear of the said lines all trees and all other obstructions or erections of any nature whatsoever which may at any time overhang, encroach or be in or on the Servient land and which may in any way endanger or interfere with the proper operation of the said lines; and
- (d) To enter into and upon the Servient land for all or any of the above purposes with or without all necessary plant, equipment, machinery and vehicles of every kind, and making good all damage occasioned thereby.

**SECONDLY** the benefit of a covenant for Aurora Energy Pty Ltd and its successors with the registered proprietors for themselves and their successors in title of the Servient land not to erect any buildings or place any structures, objects or vegetation that could interfere with the proper and safe operation of the said lines to the intent that the burden of the covenant may run with and bind the Servient Land and every part thereof and that the benefit thereof may be annexed to the easement first hereinbefore described.

### Assessment:

Approval is sought for a single dwelling on a vacant 1847m<sup>2</sup> lot at 3 Erindale Place, South Hobart. Vegetation clearing for a bushfire hazard management area is also proposed for adjacent Council land at 163 Strickland Avenue.

### Biodiversity Code

The Code applies because the clearing of native vegetation is proposed within a biodiversity protection area. The adjacent Council land to the west is within a biodiversity protection area and modification of the vegetation on that land is proposed to establish a bushfire hazard management area. The residential lot is not within a Biodiversity Protection Area.

The submitted documents indicate that twelve trees are proposed to be removed. These include six small *Eucalyptus obliqua* (stringybark) and *Acacia dealbata* (silver wattle) and one large *Eucalyptus obliqua* within the biodiversity protection area. Understorey modification is also proposed for the bushfire hazard management area on the adjacent Council land. Three *Eucalyptus globulus* (blue gum) would be removed from the residential lot.

A natural values assessment was submitted with the application. The main findings of the assessment were:

- The vegetation at 3 Erindale Place is best classified as urban areas (TASVEG code: FUR) because of the high level of disturbance, with some parts marginally classifiable as a wet sclerophyll mapping unit, either '*Eucalyptus globulus* wet forest' (WGL) or '*Eucalyptus obliqua* forest with broad-leaf shrubs' (WOB).
- The adjacent Council-owner land to the west of the title supports wet sclerophyll forest that is transitional between '*Eucalyptus globulus* wet forest' (WGL) or '*Eucalyptus obliqua* forest with broad-leaf shrubs' (WOB), with perhaps a slight favour to WGL over WOB because of a few larger canopy trees of *Eucalyptus globulus*.
- Database information and site assessment did not indicate the presence of any flora or fauna species listed as threatened.
- Database information (and site assessment did not indicate the presence of any fauna species listed as threatened).
- The lot provides potential habitat for a suite of threatened species, however it is not considered significant habitat as it is for ubiquitous and widespread species such as the Tasmanian devil, spotted-tailed quoll, eastern quoll, eastern barred bandicoot, grey goshawk. The absence of hollow-bearing trees precludes the site providing potential nesting habitat for several species (e.g. masked owl, swift parrot). The highly modified understorey and absence of key indicator species precludes the presence of threatened invertebrate species (e.g. chaostola skipper, ammonite snail). The site may be marginally suitable for the Mt Mangana stag beetle (within range) but the absence of large logs (presumably due to fire history and time since last fire) suggests the species is highly unlikely to be present.
- The lot (and adjacent area) does support *Eucalyptus globulus* (blue gum), which is recognised as a foraging resource for the swift parrot. The contribution made by individual trees, patches and larger areas of blue gums to the overall foraging resource for the swift parrot would vary considerably between years and within seasons.

The report concluded that the impact of the proposed development on biodiversity values would be low and made no recommendations for mitigation measures.

The relevant Code standards are under clause E10.7.1 'Buildings and Works'. The proposal does not comply with acceptable solution A1 because the vegetation community affected ('*Eucalyptus globulus* wet forest') is specified as being a 'moderate' priority biodiversity value in Table E10.1 of the Code. In addition, the submitted natural values assessment classifies the vegetation as being of 'moderate' priority as potential foraging habitat for swift parrots. Despite this, it is important to note that no *E. globulus* would be removed from the land within the Biodiversity Protection Area (the adjacent Council land) with all blue gums proposed for removal being located on the residential lot.

Performance criterion P1 states the following:

*Clearance and conversion or disturbance must satisfy the following...*

*(b) if moderate priority biodiversity values:*

*(i) development is designed and located to minimise impacts, having regard to constraints such as topography or land hazard and the particular requirements of the development;*

*(ii) impacts resulting from bushfire hazard management measures are minimised as far as reasonably practicable through siting and fire-resistant design of habitable buildings;*

*(iii) remaining moderate priority biodiversity values on the site are retained and improved through implementation of current best practice mitigation strategies and ongoing management measures designed to protect the integrity of these values...*

The proposed dwelling has been sited in the north-eastern corner of the lot reducing the development's impact upon the native vegetation to the south and west. The dwelling would be constructed to BAL-29 specification reducing the extent of the bushfire hazard management area. The degree of tree clearing is considered reasonable given their proximity to the proposed dwelling.

The remaining vegetation on the Council land is in relatively good condition and will be managed by Council.

#### Waterway and Coastal Protection Code

The Code applies because development is proposed within a waterway and coastal protection area (vegetation modification for the bushfire hazard management area and a sewer line).

The lot supports a waterway protection area (WPA) for Hobart Rivulet which covers the southern half of the lot, and also a smaller 10m wide WPA for a small drainage channel on the lot. The drainage channel used to convey water from the creek on the adjacent Council land to Hobart Rivulet, but is now redundant as the creek was recently piped through the residential lot.

The relevant standards are under clause E11.7.1 'Buildings and Works'. The proposal does not comply with the acceptable solution.

Performance criterion P1 states the following:

*Building and works within a Waterway and Coastal Protection Area must satisfy all of the following:*

*(a) avoid or mitigate impact on natural values;*

*(b) mitigate and manage adverse erosion, sedimentation and runoff impacts on natural values;*

*(c) avoid or mitigate impacts on riparian or littoral vegetation;*

*(d) maintain natural streambank and streambed condition, (where it exists);*

*(e) maintain in-stream natural habitat, such as fallen logs, bank overhangs, rocks and trailing vegetation;*

*(f) avoid significantly impeding natural flow and drainage;*

*(g) maintain fish passage (where applicable);*

(h) avoid landfilling of wetlands;

(i) works are undertaken generally in accordance with 'Wetlands and Waterways Works Manual' (DPIWE, 2003) and "Tasmanian Coastal Works Manual" (DPIPWE, Page and Thorp, 2010), and the unnecessary use of machinery within watercourses or wetlands is avoided.

Several *Eucalyptus globulous* would be removed from within the WPA, however this is required for the dwelling's bushfire hazard management area, being so close to the proposed dwelling. The HMA shown on the submitted BHMP does, however, extend to the southern boundary of the lot which is in excess of what is required under AS3959 (16m). **It is therefore recommended that a condition be applied to any permit granted prohibiting the removal of native vegetation beyond the required 16m HMA (except where required to install the sewer line).**

The drainage channel supports few natural values and carries little flow. No significant impacts on natural values are expected.

#### Inundation Prone Areas Code

The Code applies because development (bushfire HMA) is proposed on inundation prone land. 1% AEP flood flows from the creek on the adjacent Council land can be expected to pass overland through the middle and southern parts of the the lot.

The relevant standards are under clause E15.7.4 'Riverine Inundation Hazard Areas', however there are no applicable acceptable solutions for the proposed development within the likely flood-prone land. The application is therefore permitted under this Code and the proposal is considered consistent with the Code purpose.

#### Part 5 Agreement

The owner(s) of this property are subject to a Part 5 Agreement with Hobart City Council (C935042) that requires the owner(s) to:

- Implement the approved Bushfire Management Plan in relation to the land;
- Refrain from removing any tree on the land which has a circumference of more than 400mm measured one metre above the adjacent ground level unless that tree is within three metres of the outer wall of any building on the land that is approved by the Planning Authority or removal of the tree is necessary for safety reasons as determined and approved in writing by the Planning Authority;
- Ensure no habitable building development occurs below the High Terrace Embankment Area on the land; and
- Ensure that any dwelling or fence on the land is constructed in accordance with the guidelines and recommendations of the document *Minimising the Swift Parrot Collision Threat: Guidelines and recommendations for parrot-safe building design*.

The BHMP approved for the subdivision is out of date and can no longer be used to satisfy the *Building Regulations 2016*. An alternative certified BHMP was submitted with the application.

Several trees on the lot with a trunk diameter exceeding 400mm are proposed to be removed. The removal of these is considered necessary to establish an effective bushfire hazard management area as they are close, or within, the proposed building footprint.

The proposed building would be above the high terrace embankment.

The proposed dwelling design is largely consistent with the swift parrot collision guidelines, however a glass balustrade is proposed for the upper level deck.

Commentary regarding bird-strike risk was included in the submitted natural values report. The report states the following:

*The elevation-by-elevation and window-by-window analysis of the risk of window-strike by birds (particularly the swift parrot) has demonstrated a generally low risk, and only minor mitigation is recommended (i.e. low reflectance glass on some windows only).*

Advice is recommended for any permit granted recommending the use of low-reflectivity glazing and substituting or treating any clear glass balustrades to ensure compliance with the Agreement.

**Recommended Conditions:**

**No native vegetation may be removed from 3 Erindale Place more than 16m from the southern edge of the dwelling, unless required for the installation of the sewer line.**

Reason for condition

To ensure the use/development does not result in unnecessary or unacceptable loss of priority biodiversity values

**All construction vehicles and machinery must be effectively cleaned of soil before entering the property.**

**Soil cleaned from construction vehicles and machinery must not be allowed, either directly or indirectly, to enter waterways or the Council's stormwater system.**

*Note: further information on effective measures for washdown can be found here.*

Reason for condition

To minimise the spread of weeds and pathogens

**Sediment and erosion control measures, in accordance with an approved soil and water management plan (SWMP), must be installed prior to the commencement of work and maintained until such time as all disturbed areas have been stabilised and/or restored or sealed to the Council's satisfaction.**

**A SWMP must be submitted prior to the issue of any approval under the *Building Act 2016* or the commencement of work, whichever occurs first. The SWMP must be prepared in accordance with the *Soil and Water Management on Building and Construction Sites* fact sheets (Derwent Estuary Program, 2008), available here.**

**Particular attention must be given to managing erosion and sedimentation risk when establishing the bushfire hazard management area on the adjacent Council land.**

**All work required by this condition must be undertaken in accordance with the approved SWMP.**

*Advice: Once the SWMP has been approved, the Council will issue a condition*

*endorsement (see general advice on how to obtain condition endorsement).*

*Where building approval is also required, it is recommended that documentation for condition endorsement be submitted well before submitting documentation for building approval. Failure to address condition endorsement requirements prior to submitting for building approval may result in unexpected delays.*

Reason for Condition

To avoid the pollution and sedimentation of roads, drains and natural watercourses that could be caused by erosion and runoff from the development.

**Recommended Advice:**

Please note that the owner(s) of this property are subject to a Part 5 Agreement with Hobart City Council (C935042) that requires the owner(s) to:

- Implement the approved Bushfire Management Plan in relation to the land (superseded);
- Refrain from removing any tree on the land which has a circumference of more than 400mm measured one metre above the adjacent ground level unless that tree is within three metres of the outer wall of any building on the land that is approved by the Planning Authority or removal of the tree is necessary for safety reasons as determined and approved in writing by the Planning Authority (trees proposed to be removed on plans approved);
- Ensure no habitable building development occurs below the High Terrace Embankment Area on the land (proposal complies); and
- Ensure that any dwelling or fence on the land is constructed in accordance with the guidelines and recommendations of the document Minimising the Swift Parrot Collision Threat: Guidelines and recommendations for parrot-safe building design.

With regard to compliance with the swift parrot collision guidelines, it is recommended that the following occurs to avoid breaching the Agreement:

- low-reflectivity glass (<10% visible light reflectivity) is used wherever possible; and
- the clear glass balustrades are treated in accordance with the guidelines (frosted, tinted, patterned etc) or substituted with an alternative balustrade design (e.g. tension wire).

Copies of the Part 5 Agreement are available from The LIST website ([www.thelist.tas.gov.au](http://www.thelist.tas.gov.au)) via the 'Scanned Dealings' section.

## **8. REPORTS**

---

### **8.1 Sullivans Cove Planning Scheme 1997 - Macquarie Point Site Development Plan - Proposed Amendments File Ref: F17/56953; 32-3-93**

---

Report of the Manager Planning Policy and Heritage and the Director  
City Planning of 9 January 2019 and attachments.

Delegation: Council

**REPORT TITLE: SULLIVANS COVE PLANNING SCHEME 1997 -  
MACQUARIE POINT SITE DEVELOPMENT PLAN -  
PROPOSED AMENDMENTS**

**REPORT PROVIDED BY:** Manager Planning Policy and Heritage  
Director City Planning

**1. Report Purpose and Community Benefit**

- 1.1. This report considers a notice (Attachment A) to Council as the planning authority, from the Board of the Macquarie Point Development Corporation (MPDC), under section 39G(3) of the *Macquarie Point Development Corporation Act 2012* (MPDC Act).
- 1.2. The notice specifies that the Board intends to request, under s39G(1) of the MPDC Act, the Minister for State Growth to amend the *Sullivans Cove Planning Scheme 1997* (SCPS). The proposed amendments relate to various clauses in the Macquarie Point Site Development Plan (SDP) and the parking policy objectives in Section 26.3.
- 1.3. Council has 21 days from the date of the notice (2 Jan 2019) to make a representation in relation to the intended request.
- 1.4. A copy of the draft amendments and supporting planning report is provided in Attachments B and C.
- 1.5. The proposal benefits the community by ensuring that redevelopment of the site is undertaken in a manner consistent with the strategic objectives of the SCPS1997 and the *Macquarie Point Development Corporation Act 2012*.

**2. Report Summary**

- 2.1. The Tasmanian Government considers that Macquarie Point presents a once in a generation opportunity for Hobart and Tasmania and in 2016 directed the MPDC to reset the vision for the Macquarie Point site and prepare a new plan for development based on the MONA vision.
- 2.2. Under the new vision the area is to be developed to include public space, exhibition space, commercial space, cultural space, conference facilities, accommodation and facilities to support Hobart's role as Australia's Antarctic gateway and tourism infrastructure.
- 2.3. The proposed amendments to implement the reset vision include changes to the Desired Future Character Statements (32.3), height and siting plan (Figures 32.3 and 32.4), development standards (32.7.3 to 32.7.7) and general considerations (32.4) to implement the height, siting and design concepts from the reset masterplan.

- 2.4. The MPDC has submitted that the following concepts are embodied in the proposed amendments and are considered to be highly consistent with the Objectives for Urban Form under Section 23.2 of the SCPS1997:
  - 2.4.1. The bulk, height and siting of buildings are to be sympathetic to the natural topography of the headland, escarpment surrounding the Cenotaph and reinforce the natural shoreline;
  - 2.4.2. Maintain important views as identified on Figure 32.4 of the SDP;
  - 2.4.3. Enrich the meaning and memory of the changing nature of Macquarie Point over time through expression of the use and development layers from the past including the topography, natural shoreline, Round House, Goods Shed and Royal Engineers Building;
  - 2.4.4. Develop a network of connections through and around the site including a series of primary shared street spaces extending north from Evans Street towards the centre of the site; and smaller and more intimate secondary spaces. Their position can be adjusted to suit specific development as it unfolds;
  - 2.4.5. Reinforce a well-defined built edge to Evans Street, set back to highlight the Goods Shed as a public entry point to the site;
  - 2.4.6. Built form is to be 'set in the round' on the 'cove floor';
  - 2.4.7. Buildings are to incorporate articulated roof forms to provide interest when viewed from elevated surrounding areas of the Cenotaph and Domain.
- 2.5. It is considered that the proposed amendments to the Macquarie Point SDP in the SCPS are an appropriate response to the Tasmanian Governments revised vision for the future use and development of the site.
- 2.6. It is recommended that the proposed amendments be supported as they are consistent with; the strategic principles of the SCPS1997, the Southern Tasmania Regional Land Use Strategy, relevant State Policies and further the objectives of LUPAA.
- 2.7. An additional amendment incorporating a use standard for visitor accommodation is also recommended consistent with the approach taken in Planning Directive No 6 – Exemption and Standards for Visitor Accommodation in Planning Schemes.

### 3. **Recommendation**

***That:***

- 1. Pursuant to section 39G(4) of the Macquarie Point Development Corporation Act 2012, Council advise the Board of the Macquarie Point Development Corporation that it supports the proposed request to the Minister for State Growth and the draft amendments to the Sullivans Cove Planning Scheme 1997 as shown in Attachment B.***
- 2. Council recommend to the Board that an additional amendment be included which applies standard A2/P2 in Planning Directive No 6 – Exemption and Standards for Visitor Accommodation in Planning Schemes to visitor accommodation use.***
- 3. Council delegate to the General Manager the authority to give notice to the Minister under section 39H(4) of the MPDC Act that Council intends to seek representations from the public in relation to the proposed amendments.***

### 4. **Background**

- 4.1. In 2012, the State Government established the Macquarie Point Development Corporation (MPDC) and gave it responsibility for the remediation and redevelopment of most of the land within Activity Area 3.
- 4.2. Under the *Macquarie Point Development Corporation Act 2012*, the MPDC is required to plan, facilitate and manage the redevelopment of the site.
- 4.3. At its meeting of 12 October 2015, Council initiated amendments to the SCPS which inserted the Macquarie Point SDP, along with other associated amendments to the planning scheme document in order to facilitate implementation of the *Macquarie Point Strategic Framework and Masterplan 2015-2030*.
- 4.4. Following a public exhibition and lengthy hearing process, the Tasmanian Planning Commission gave final approval to a modified version of the amendments in November 2016.
- 4.5. In response to an invitation from the State Government, in December 2016, Mona put forward its vision for the Macquarie Point site focusing on the development of an arts and cultural precinct and a nationally significant Truth and Reconciliation Art Park.

- 4.6. In response to public feedback and recognising that Macquarie Point presents a once in a generation opportunity for Hobart and Tasmania, the State Government directed the MPDC to reset the vision for the Macquarie Point site and prepare a new plan for development based on the Mona vision. The reset masterplan focuses solely on the first stage of the Mona vision and is confined to the bounds of the existing Site Development Plan in the SCPS1997.
- 4.7. Under the new vision the area is to be developed to include public space, exhibition space, commercial space, cultural space, conference facilities, accommodation and facilities to support Hobart's role as Australia's Antarctic gateway and tourism infrastructure.

### ***Macquarie Point Development Corporation Amendment Act 2018***

- 4.8. On 17 December 2018, the Parliament of Tasmania passed the *Macquarie Point Development Corporation Amendment Act 2018*. The intention of this Act was to provide a framework to accelerate investment in, and development of, the Macquarie Point site to reflect a shift in focus from remediation to redevelopment.
- 4.9. The Amendment Act also introduced a new process for the Minister for State Growth to amend the SCPS. This process is outlined in the flow chart provided in Attachment D. The relevant MPDC Act provisions are provided in Attachment E.
- 4.10. The process requires the Board of the MPDC to give notice to Council and invite representations within 21 days prior to submitting a request for a planning scheme amendment to the Minister for State Growth. If the Minister agrees to prepare an amendment the Minister must give notice to Council.
- 4.11. Council then has 14 days to give notice to the Minister if it:
  - 4.11.1. Intends to undertake public consultation;
  - 4.11.2. Does not intend to undertake public consultation; or
  - 4.11.3. Does not support the proposed amendments.
- 4.12. If Council elects not to undertake public consultation it may make representations to the Minister on the planning scheme amendments within 28 days.

### ***Existing situation***

- 4.13. The Macquarie Point site is approximately 9.3 hectares in area and lies predominantly on the reclaimed cove floor adjacent to the working port, along the Derwent River at the eastern edge of the city.

- 4.14. At present the site is largely vacant open space, occupied by a small office building, microbrewery and a number of sheds. The site has also been used for other community events including Dark Mofo since 2015 and a range of public events and performances in the Goods Shed.
- 4.15. Land in the surrounding area is primarily used for recreation, public access, the Cenotaph, commercial and professional services, retailing, port facilities, light industry, marine industry, fishing industry, waste water treatment and educational purposes.
- 4.16. Remediation of the contaminated parts of the site have commenced and will be ongoing for some time in accordance with the site remediation strategy.

### ***Existing Planning Scheme Provisions***

- 4.17. The site incorporates the Former Railyards and Boral concrete batching plant 'Key Sites' under Part F of the Planning Scheme. The Key Site status means that the Planning Authority has identified the site as having the potential to be used or developed to achieve a range of strategic planning objectives.
- 4.18. The site is contained within Activity Area 3.0 which also matches the extent of the Macquarie Point Site Development Plan. The provisions for the SDP are set out under Section 32 of the Planning Scheme and are intended to facilitate the identified preferred future through promotion of appropriate use and development and to implement the *Macquarie Point Strategic Framework and Masterplan 2015-2030*.
- 4.19. The key elements of the SDP are as follows:
  - 4.19.1. Desired future character statements (32.3);
  - 4.19.2. Matters to be considered when assessing applications (32.4);
  - 4.19.3. Use tables setting out exempt, permitted, discretionary and prohibited uses in use areas 1, 2 and 3 (32.5);
  - 4.19.4. Use standards related to providing a mix of uses, residential amenity and car parking provision (32.6);
  - 4.19.5. Development standards related to port impacts, building form, alignment, design, outdoor storage, inundation and pedestrian links (32.7);
  - 4.19.6. Subdivision (32.8); and
  - 4.19.7. Environmental management related to site remediation and attenuation distance from the Macquarie Point waste water treatment plant (32.14).

***Macquarie Point Reset Masterplan***

- 4.20. The Tasmanian Government considers that Macquarie Point presents a once in a generation opportunity for Hobart and Tasmania and directed the MPDC to reset the vision for the Macquarie Point site and prepare a new plan for development based on the MONA vision.
- 4.21. The reset masterplan follows a direction from the Minister to the Board of the Corporation under Section 36(2) of the MPDC Act to amend the *Macquarie Point Strategic Framework and Masterplan 2015-2030* (former masterplan). The reset masterplan is an amended site redevelopment plan under Section 37(6) and took effect when approved by the Minister under Section 37(7) of the MPDC Act.
- 4.22. The reset masterplan represents the urban design rationale which ground-truths the Monna Vision and aligns with the strategic policies of the SCPS.
- 4.23. It outlines the key concepts and proposed uses as well as importantly allowing for a built form which respects, recognises and acknowledges the landscape in which it sits.
- 4.24. The reset masterplan envisages a connected and active place at ground level and the mixed-use nature of the site is demonstrated by the flexibility offered in the use area plan.
- 4.25. Arts and institutional uses are proposed adjacent to the boundary shared with the Hobart port reflecting the need to provide a buffer zone of non-sensitive uses.
- 4.26. The siting of these uses also makes provision for the possible requirement for some limited direct access into the port area particularly from the Antarctic and Science precinct. The remainder of the site presents opportunities for mixed-use development.
- 4.27. Unlike the former masterplan, the reset masterplan does not designate building lots, rather it offers larger parcels with the flexibility to respond to the nature and scale of the specific development and market demand providing the strategic principles which underpin the Planning Scheme are furthered.
- 4.28. As with the former masterplan, car parking will be kept to the periphery of the site as much as possible to emphasise the prioritisation of pedestrians under the site's mobility network.
- 4.29. The ultimate arrangement of uses over the life of the development will be informed by the Corporation's land release strategy and discussions with potential developers.
- 4.30. A detailed assessment of the reset masterplan is contained in section 4 of the MPDC Planning Report provided in Attachment C.

## 5. Proposal and Implementation

- 5.1. Council may make a representation to the Board of the MPDC by 23 January 2019 in relation to the proposed request to the Minister and the draft amendments. The representation may include a statement that Council:
  - 5.1.1. Does not support the proposed request or draft amendments; and;
  - 5.1.2. A statement of the amendments that would need to be made to the request and the draft planning scheme amendments in order for Council to support them.
- 5.2. In relation to the proposed request to the Minister to prepare planning scheme amendments to facilitate implementation of Stage 1 of the Mona vision, it is considered that the request is appropriate as such a request is facilitated by recent amendments to the MPDC Act passed by the Parliament of Tasmania.
- 5.3. In relation to the draft planning scheme amendments it is considered that support is merited as the planning assessment provided by the MPDC demonstrates that the amendments:
  - 5.3.1. Further the requirements of the objectives set out in Schedule 1 to the *Land Use Planning and Approvals Act 1993* (LUPAA);
  - 5.3.2. Are consistent with applicable State Policies;
  - 5.3.3. As far as practicable are consistent with the Southern Tasmania Regional Land Use Strategy; and
  - 5.3.4. Are consistent with the Sullivans Cove Strategic Framework under Part B of the SCPS.
- 5.4. Prior to submission, the MPDC consulted with Council officers in relation to the technical merits and drafting of the proposed amendments. The issues raised during that consultation process have generally been addressed in the final draft of the amendments.
- 5.5. The rationale for and merits of the proposed amendments are outlined and discussed below.

### ***Draft Planning Scheme Amendments***

- 5.6. The principal amendments are as follows:
  - 5.6.1. Amend Clause 32.1.1 of the SDP to change the reference from the former master plan to the reset masterplan.

- 5.6.2. Insert a new clause 32.2.6 that allows consideration of interim or temporary use and development for a period up to 5 years providing buildings are located and designed in a manner that does not prejudice the future development of the area or appropriate pedestrian, cycle and vehicle linkages through the site to adjacent Activity Areas.
- 5.6.3. Amend the Desired Future Character Statement under 32.3.4 to reflect the removal of a physical building envelope from the reset masterplan layout. The site of the former Round House is now to be acknowledged as a landscape element.
- 5.6.4. The key public space located close to the intersection of the Brooker and Tasman Highways and Davey and Evans Streets will now form the landmark entry to the site for those approaching from the CBD.
- 5.6.5. Amend the Desired Future Character Statement in clause 32.3.7 to ensure that buildings on the Cove Floor are to be freestanding, built in the round as opposed to the regular street grid of buildings on natural ground.
- 5.6.6. Amend the view lines under the Desired Future Character Statement at clause 32.3.8 including to:
  - 5.6.6.1. Replace the reference to the Water to Water Promenade with the view aligning NE/SW from Sullivans Cove to the Derwent River;
  - 5.6.6.2. Insert a new reference to the important view to Kangaroo Bay; and
  - 5.6.6.3. Insert a new reference to the view along key public space and from the Cove Floor to the Cenotaph.
- 5.6.7. Amend the Desired Future Character Statement in clause 32.3.9 to remove the reference to the industrial saw tooth roof form and insert a new example for rooftop gardens. The reset masterplan moves away from the industrial/ saw tooth form focus of the former masterplan.
- 5.6.8. Amend the Desired Future Character Statement in Clause 32.3.11 to respond to the updated spatial network of the reset masterplan and associated replacement Figure 32.3.
- 5.6.9. Insert a new Desired Future Character Statement at Clause 32.3.12 noting the requirement for a direct pedestrian link between the Key Public Space and Cenotaph that traverses the escarpment. It is expected that this will most likely require installation of a lift or similar for accessibility.

- 5.6.10. Insert a new Desired Future Character Statement at Clause 32.3.13 to reflect the intended gateway building at the western entry of the site in the vicinity of the Concert Hall and intersection of Davey and Evans Street.
- 5.6.11. Insert a new Desired Future Character Statement at Clause 32.3.14 to ensure that developments for noise sensitive uses are adequately designed and constructed to protect residential amenity and reduce the potential for land use conflict that may compromise the use of Macquarie Point as a major public event space.
- 5.6.12. Insert a new matter for consideration under Clause 32.4 requiring consideration of the impact of proposed use and development on the viability of Macquarie Point as a major public event space.
- 5.6.13. Amend the Use Tables in Clause 32.5 to better reflect the intended uses under the reset masterplan and amend the related use areas in Figure 32.1.
- 5.6.14. Amend the deemed to comply standard under A1 of Clause 32.6.1 to reflect updated gross floor areas associated with the uses of the reset masterplan. The reset masterplan has a reduced focus for residential development now including a 15,000m<sup>2</sup> maximum Gross Floor Area within Use Areas 2.1 and 2.2 shown on Figure 32.1 down from 50,000m<sup>2</sup>. This limit reflects the shift under the reset masterplan to a more civic focus for the site and to ensure that uses contribute to the interest and activity of the area.
- 5.6.15. Amend clause 32.6.2 to apply more generally to Residential and Visitor Accommodation Uses throughout the site in order to protect residential amenity and reduce the potential for land use conflict with the working port and the use of the site as a major public event space.
- 5.6.16. Amend A2 of clause 32.7.2 to remove the reference to the Round House and remove the reference to specific roof forms and instead include a floor area threshold of 300m<sup>2</sup>, above which the treatment of roofs will be discretionary.
- 5.6.17. Amends P1 of clause 32.7.2 to ensure that buildings sited adjacent to the headland do not protrude above the escarpment when viewed from the Cenotaph.
- 5.6.18. Amend A3 of clause 32.7.2 to ensure that buildings are built within the areas on Figure 32.3 but don't necessarily need to match the shape of the envelopes.

- 5.6.19. Amend clause 32.7.3 to provide flexibility for buildings to be sited within larger building areas with a focus on forming the spaces but not necessarily occupying the entire width of the longer street frontages of these building areas. The Performance Criteria provide for a variation in building shapes provided that the overall impression is of retention of continuous alignment of space.
- 5.6.20. Amend clause 32.7.5 to reflect the updated layout and urban design rationale of the reset masterplan. This clause currently manages the siting of buildings within the open space area between the northern edge of buildings shown on the Development Framework Figure 32.3 and the foot of the escarpment. This clause is now amended to apply to buildings along the foot of the escarpment within Use Area 2 on Figure 32.1.
- 5.6.21. Amend the Objective and P1 of clause 32.7.6 to replace the term 'interaction' with 'interest' in response to a recognition that the civic nature of some buildings mean that it may not be practical in all cases to provide windows in the frontage of a building.
- 5.6.22. Amend the attenuation standard from the waste water treatment plant clause 32.14.6 to insert a new P1 for consideration of sensitive uses within the 400m and delete A2 and P2 dealing with non- sensitive uses. These changes are consistent with the approach under the Attenuation Code of the State Planning Provisions.
- 5.6.23. Update Figures; 32.1 Use Areas, 32.2 View and Sightlines, 32.3 Development Framework and 32.4 Building Envelopes and Heights to reflect the reset masterplan.

### ***Discussion***

- 5.7. The proposed amendments include changes to the Desired Future Character Statements (32.3), height and siting plan (Figure 32.3 and 32.4), development standards (32.7.3 to 32.7.7) and general considerations (32.4) to implement the height, siting and design concepts from the reset masterplan.
- 5.8. The MPDC has submitted that the following concepts are embodied in the proposed amendments and are considered to be highly consistent with the Objectives for Urban Form under Section 23.2 of the SCPS:
  - 5.8.1. The bulk, height and siting of buildings are to be sympathetic to the natural topography of the headland, escarpment surrounding the Cenotaph and reinforce the natural shoreline;

- 5.8.2. Maintain important views as identified on Figure 32.4 of the SDP;
  - 5.8.3. Enrich the meaning and memory of the changing nature of Macquarie Point over time through expression of the use and development layers from the past including the topography, natural shoreline, Round House, Goods Shed and Royal Engineers Building;
  - 5.8.4. Develop a network of connections through and around the site including a series of primary shared street spaces extending north from Evans Street towards the centre of the site; and smaller and more intimate secondary spaces. Their position can be adjusted to suit specific development as it unfolds;
  - 5.8.5. Reinforce a well-defined built edge to Evans Street, set back to highlight the Goods Shed as a public entry point to the site;
  - 5.8.6. Built form is to be 'set in the round' on the 'cove floor';
  - 5.8.7. Buildings are to incorporate articulated roof forms to provide interest when viewed from elevated surrounding areas of the Cenotaph and Domain.
- 5.9. The key issues related to the implementation of the reset masterplan are outlined below:

***Building envelope and view lines***

- 5.10. The former masterplan identified and modelled specific building envelopes that translated to Figure 32.4 of the SDP. The proposed updates to that Figure reflect an overlay of the use areas of the reset masterplan with the heights of the former masterplan. Where the 2017 use areas extended over more than one 2015 building envelope, the lowest of the 2015 building envelope heights has been taken to be the permitted height for the proposed replacement Figure 32.4.
- 5.11. Applying the lowest of the 2015 building heights as the permitted height for the 2017 use areas ensures that 2017 Planning Scheme amendments go further in ensuring that the important views and sightlines are not unreasonably impacted.
- 5.12. The assessment by Leigh Woolley (Urban Design Consultant) demonstrates that the proposed permitted envelopes under the replacement Figure 32.4 will significantly reduce the impact on those envelopes as viewed from the previously established important viewing points including from the Cenotaph and within the Cove.

***Traffic, access and parking***

- 5.13. Under the reset masterplan, development will continue to have strong pedestrian and cycling links within the site itself and to reconnect with its surrounds including the Hobart waterfront and CBD, Intercity Cycleway and Queens Domain. The street network will minimise vehicular access to heart of the site. To ensure that future transport networks can be incorporated within the site, corridors for the movement of light rail and heavy vehicles will be reserved where they traverse the site.
- 5.14. Movement of vehicles will be focused on Evans Street, and the access from the Tasman Highway to the Escarpment area. Access to particular development sites and car parking areas will be off Evans Street or the Escarpment car park access. Whilst the internal street network has not been precisely defined, it is not expected that there would be connectivity through the site, for instance between the Escarpment and Evans Street.
- 5.15. The pedestrian movement network comprises various corridors crossing the site, in addition to the vehicular corridors described above which would also provide for pedestrian movement. There will be two primary pedestrian corridors, meeting at right angles in the centre of the site. One corridor is essentially an extension of the Brooker Avenue alignment. The other primary corridor is a continuation of Franklin Wharf, connecting Hunter Street with the site through the University of Tasmania / IXL buildings between Hunter Street and Evans Street.
- 5.16. Access for cyclists would utilise a combination of the vehicular network and the pedestrian network, providing a high degree of accessibility through the site.
- 5.17. The reset masterplan maintains the proposal for a maximum of 350 off-street parking spaces on the Macquarie Point site, with an additional 350 spaces in the escarpment car park area.
- 5.18. The Traffic Impact Assessment (GHD) indicates that the volume of peak period traffic activity associated with the reset masterplan is generally less than assumed in the previous (2015) assessment. An increase of some 50 vehicles per hour is expected in the PM peak, departing the site via Evans Street. However in the context of the overall volume of traffic activity from Macquarie Point, and already on the network in the vicinity, this increase is relatively minor.

***Market Impacts***

- 5.19. The market impacts of the reset masterplan have been assessed by the AEC Group. The former masterplan took a more prescriptive approach to allocating floor space across uses, whereas the new reset masterplan designates maximum floor space caps to various uses - enabling flexible delivery of the development over a 15 year+ horizon.

- 5.20. Principally, the difference in quantum of floor space envisaged in the reset masterplan compared with the former masterplan is a substantial increase in floor space for education and research uses (from 13,600m<sup>2</sup> to a potential maximum of 50,000m<sup>2</sup> GFA). Other differences include:
- 5.20.1. The maximum floor area limit for Residential uses has been reduced from 43,949m<sup>2</sup> to 15,000m<sup>2</sup>.
- 5.20.2. Commercial floor space is reduced to a maximum of 30,000m<sup>2</sup> from circa 54,500m<sup>2</sup>.
- 5.20.3. Hotel uses are increased slightly, from around 16,000m<sup>2</sup> to a maximum of 20,000m<sup>2</sup>.
- 5.20.4. Retail uses remain broadly unchanged, previously circa 9,400m<sup>2</sup> to 10,000m<sup>2</sup>.
- 5.21. The overall conclusion is that the floor space allocated to the different uses will have negligible impact on existing markets or the retail function of the Hobart CBD.

### ***Infrastructure***

- 5.22. The updated Infrastructure Assessment prepared by Pitt & Sherry confirms that, in broad terms, there is sufficient capacity within existing power, communication, sewer, water and gas networks to service development in accordance with the reset masterplan with only limited off site works and payment of standard authority charges.
- 5.23. As with the former Masterplan, the specifics of the stormwater system have not been fully resolved at this stage however, it is expected that any new development would be able to discharge readily to the river given its proximity should the existing connections not be acceptable.

### ***Waste water treatment plant impacts***

- 5.24. The requirements under clause 32.14.6 of the SCPS mandate that twenty uses cannot be sited within 400 m of the Macquarie Point wastewater treatment plant (WWTP) whilst it is still operating, unless a site-specific report is provided that satisfies P2 of clause 32.14.6.
- 5.25. Amendments are proposed to clause 32.14.6 in line with the State Planning Provisions for sensitive uses within a distance of 400 m from the boundary of the WWTP. The existing Clause 32.14.6 flowed from evidence provided to the TPC during hearings on the SDP amendments to the SCPS in 2016. At that time, all evidence was on a 'desktop basis'.

- 5.26. The more recent odour audit and modelling report prepared by Environmental Dynamics brings new odour and noise modelling evidence informed by on site odour and noise sampling. The 2017 odour audit and sampling has found the main odour sources are the emissions from the tanker unloading, and fugitive odours from the nearby inlet works area. The consultants have concluded that if these odour sources are mitigated, then the remaining odour sources are such that a reduction of the 400m attenuation distance to a 200m attenuation distance is appropriate even without further odour mitigation.
- 5.27. On the 18 September 2018, TasWater and the Government announced that the WWTP would be decommissioned and removed within 4 years. Environmental Dynamics report supports the discretionary use status for consideration of sensitive uses over the intervening period.

### ***Heritage***

- 5.28. As outlined in the report by Austral Tasmania, the site has been subject to a number of previous heritage investigations which are relevant to the proposed Planning Scheme amendments.
- 5.29. The SDP area currently contains only the Royal Engineers Building, Goods Shed and the Red Shed as places of cultural significance in Table 1 and Figure 5 of Schedule 1.
- 5.30. The proposed amendments do not effect these listings and future 'building or works' to these places would therefore continue to be subject to the provisions of clause 22.4 of the Planning Scheme.
- 5.31. The site includes two places of archaeological sensitivity identified in Table 2 and Figure 5a of Schedule 1. These two places are the:
- 5.31.1. 'Royal Engineers Headquarters and Kings Yard' (Ref. No. 12);  
and
- 5.31.2. 'Hobart Rivulet - Domain Diversion Tunnel' (Ref. No. 90).
- 5.32. Other parts of the site are not identified in the Planning Scheme as places of archaeological sensitivity, although the general provision of clause 22.6.1 relating to excavation within the planning area may be applicable.
- 5.33. Aboriginal heritage investigations have been undertaken of the site and no sites of significance have been identified.

### **Visitor Accommodation**

- 5.34. Visitor Accommodation is a permitted use in Use Area 2 – Mixed Use in the current SDP and in the proposed amendments. It is considered that the opportunity should be taken in these amendments to address the potential conflicts between long term residential use and short term visitor accommodation.
- 5.35. This is consistent with the approach taken in Planning Directive No 6 (PD6) – Exemption and Standards for Visitor Accommodation in Planning Schemes. The PD6 provisions have the effect of making visitor accommodation in Sullivans Cove Activity Area 2: Mixed Use permitted only where the application relates to all dwellings in a strata complex or relates to an individual dwelling with separate ground level pedestrian access to a road. Otherwise visitor accommodation in strata complexes is prohibited.
- 5.36. Given that new residential buildings in Macquarie Point are likely to be designed for specific residential uses and or visitor accommodation, the prohibition that applies in Activity Area 2 may not be necessary. It should be sufficient to apply the PD6 discretionary standard A2/P2 as shown below:

|   |  |
|---|--|
| <p><b>A2</b></p> <p>Visitor Accommodation is not for a lot, as defined in the <i>Strata Titles Act 1998</i>, that is part of a strata scheme where another lot within that strata scheme is used for a residential use.</p> | <p><b>P2</b></p> <p>Visitor Accommodation within a strata scheme must not cause an unreasonable loss of residential amenity to long term residents occupying other lots within the strata scheme, having regard to:</p> <ul style="list-style-type: none"> <li>(a) the privacy of residents;</li> <li>(b) any likely increase in noise;</li> <li>(c) the residential function of the strata scheme;</li> <li>(d) the location and layout of the lots;</li> <li>(e) the extent and nature of any other non-residential uses; and</li> <li>(f) any impact on shared access and common property.</li> </ul> |
|---|--|

### **Contaminated Land**

- 5.37. A site Remediation Strategy Overview by AECOM provides an update as of 2017.
- 5.38. Management of land contamination on the site is currently addressed in Section 32.14 Environmental Management and no amendments are proposed to these provisions.

- 5.39. The MPDC Act 2012 and the contaminated land provisions under Section 32.14 of the SDP enable an accredited Environmental Auditor to be appointed to certify that parts of the Site are suitable for the proposed purposes.
- 5.40. The Corporation has engaged an independent Site Environmental Auditor to provide confidence to key stakeholders that environmental investigations and remedial activities have been completed to a level compliant with required standards.

### ***Climate change***

- 5.41. The Tasmanian Government commissioned GHD to prepare a climate change impact assessment in July 2012. The purpose of the assessment was to review the effect of storm surges and sea level rise on the proposed development of the Macquarie Point site.
- 5.42. The analysis indicated that:
  - 5.42.1. 1 in 100 year Inundation Level due to sea level rise and storm surge for the site is 2.3m above Australian Height Datum (AHD); and
  - 5.42.2. A 0.5m freeboard will be required for habitable floors (i.e. 2.8 AHD minimum level).
- 5.43. The Development Standard for Inundation Hazard under Clause 32.7.9 of the SDP will remain and ensure that the finished floor level of a habitable room is no less than 2.8m above AHD.

### ***Land Use Conflict***

- 5.44. The proposal as far as practicable avoids the potential for land use conflicts with use and development permissible in the surrounding area. The three pertinent issues are the interface with the working port, the potential for environmental harm to surrounding uses from the WWTP and the potential for land use conflict between residential and visitor accommodation uses and the use of Macquarie Point for major public events.
- 5.45. The proposed amendments maintain the provisions of the SCPS that manage the port interface and ensure that future use and development does not compromise the operation of the Port of Hobart. To protect the operations of the port the non-sensitive use buffer of the Arts and Institutional Activity Area (existing Commercial and Institutional Area) will be maintained and Desired Future Character Statements are included in the SDP at clause 32.3.5, along with standards at clauses 32.6.2 and 32.7.1 for both sensitive and non-sensitive uses in specific areas along, or in close proximity to, the port boundary.

- 5.46. Subject to Environmental Dynamics report, the proposed amendments to Clause 32.14.6 will as far as practicable, avoid the potential for land use conflicts between the WWTP, while it continues to operate, and the use and development permissible under the Planning Scheme.
- 5.47. The proposed amendments includes a new matter for consideration under Clause 32.4 and amendments to Clause 32.6.2 requiring residential and visitor accommodation development to be designed and constructed to achieve a minimum reduction in sound pressure level between the exterior of the building and the bedroom or living room. The design targets in 32.6.2 have been drafted with reference to similar provisions for an entertainment zone in the Fortitude Valley Neighbourhood Plan, Brisbane City Council, 2000.

### ***Southern Tasmania Regional Land Use Strategy***

- 5.48. The MPDC assessment (section 7.5 of the supporting Planning Report) of the proposed amendments in relation to the STRLUS is supported. The proposed amendments are consistent with the following strategies in the STRLUS:
- 5.48.1. The STRLUS recognises the strategic economic importance of the site in policies SEO 1.1 & SEO 1.2. The proposed amendments are consistent with these policies in that it provides place specific planning scheme provisions that are based upon a masterplan designed to capitalise upon the strategic advantages of the site: being its location in proximity to Hobart CBD and Sullivans Cove.
- 5.48.2. The proposed amendments also provide for mixed use development within the Primary Activity Centre (being defined as Hobart CBD and immediate surrounds including the waterfront) consistent with the Activity Centres policies under the STRLUS. The amendment does not undermine the primacy of the Hobart CBD in the Activity Centre Hierarchy.

### ***Objectives of the Land Use Planning and Approvals Act 1993***

- 5.49. The Minister must be satisfied that the proposed amendments further the Objectives set out in Schedule 1 of the Land Use Planning and Approvals Act 1993. The MPDC assessment in section 7.5 of the supporting Planning Report in relation to these objectives is supported.

### ***Conclusion***

- 5.50. It is considered that the proposed amendments to the Macquarie Point SDP in the SCPS are an appropriate response to the Tasmanian Governments revised vision for the future use and development of the site.

- 5.51. It is recommended that the proposed amendments be supported as they are consistent with; the strategic principles of the SCPS1997, the Southern Tasmania Regional Land Use Strategy, relevant State Policies and further the objectives of LUPAA.

## **6. Strategic Planning and Policy Considerations**

- 6.1. The proposed planning scheme amendments will assist in the achievement of the strategic objectives of the Capital City Strategic Plan 2015-2025 particularly in relation to Goal 1 Economic Development, Vibrancy and Culture and Goal 2 Urban Management - 2.3 "City and regional planning ensures quality design, meets community needs...."

## **7. Financial Implications**

- 7.1. Funding Source and Impact on Current Year Operating Result
- 7.1.1. The planning scheme amendments themselves do not have any financial implications.
- 7.2. Impact on Future Years' Financial Result
- 7.2.1. The planning scheme amendments themselves do not have any financial implications. Future development of the site and implementation of the reset vision may have implications in future financial years.
- 7.3. Asset Related Implications
- 7.3.1. None.

## **8. Legal, Risk and Legislative Considerations**

- 8.1. The proposed amendments to the Macquarie Point SDP in the SCPS are being dealt with under Division 3 of the *Macquarie Point Development Corporation Act 2012*.
- 8.2. This report considers a notice to Council as the planning authority, from the Board of the MPDC, under section 39G(3) of the MPDC Act. Council has until the 23 January 2019 to make a representation in relation to the intended request for a planning scheme amendment.

## **9. Community and Stakeholder Engagement**

- 9.1. The MPDC has engaged with close to 20 consultative groups including over 300 stakeholders at each stage of the vision reset process to provide opportunities for input. The MPDC has consulted with the Aboriginal community on the concept of the reset vision, with particular focus on the Truth and Reconciliation Art Park.

- 9.2. A series of further stakeholder briefings will be conducted by the MPDC across key business, tourism, arts and culture, political and Antarctic groups. The purpose of these briefings is to inform the stakeholders about the new vision for Macquarie Point and update them on the progress to date.
- 9.3. If the Minister agrees to prepare an amendment as requested by the Board, Council has the ability to undertake public consultation for a 28 day period prior to making a representation in relation to the draft amendments. Given that the amendments are not following the usual LUPAA amendment process it is recommended that this 28 day public consultation process be conducted.

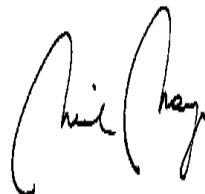

## 10. Delegation

- 10.1. If the Minister agrees to prepare an amendment as requested by the Board, Council has 14 days in which to advise the Minister that public consultation will be undertaken.
- 10.2. Given the short time frame provided under the MPDC Act, it is proposed that Council delegate to the General Manager the authority to give notice to the Minister under section 39H(4) of the MPDC Act that Council intends to seek representations from the public.

*As signatory to this report, I certify that, pursuant to Section 55(1) of the Local Government Act 1993, I hold no interest, as referred to in Section 49 of the Local Government Act 1993, in matters contained in this report.*

Macquarie Point  
Development Corporation

Mr Nick Heath  
General Manager  
City of Hobart  
50 Macquarie Street  
HOBART TAS 7000

GPO Box 251  
Hobart Tasmania 7001  
macquariepoint.com

ABN 92 657 409 841

Dear Mr Heath

**Proposed amendments to the planning arrangements at Macquarie Point**

Macquarie Point (Mac Point) represents an exciting and unique opportunity for Hobart and our State.

The site links together key destinations and activity centres in the city between the Queens Domain, the Regatta Grounds, Sullivans Cove, Salamanca, the waterfront and Hobart's CBD.

It represents the opportunity to facilitate community, social and cultural celebrations and engagement, as well as a hub for arts and culture, innovation, scientific research and design excellence.

However, to enable the Macquarie Point Development Corporation (Corporation) to bring the site to life, there is a requirement to update the *Sullivans Cove Planning Scheme 1997* to reflect the revised masterplan for the site and to bring the planning arrangement in line with stage 1 of the Mona vision.

The *Macquarie Point Development Corporation Act 2012* (the Act) provides a process to do this, where the Corporation's Board can request the Minister for State Growth consider making amendments to the planning scheme.

I am contacting you to advise that the Board intends to make such a request and am providing a copy of the planning amendments we intend to seek (attached).

Before making that request, on behalf of the Board I would like to invite you to provide feedback and make representations as appropriate in relation to the attached proposed planning amendments.

This process is outlined under the Act in S39G(3) and S39G(4) which sets the timeframe for representations to the Board of 21 days. Therefore, in the first stage of the planning approval process it would be appreciated if the Council could provide a formal response to the Corporation by 23 January 2019.

Upon the receipt of your formal response, the Board must consider all representations and determine whether or not to amend the proposed request and the draft of the amendments.

The process following the Board's consideration of the outcomes of the consultation, is a formal Report to the Minister as set out under S39G(8).

It is then the Minister's decision as to whether the draft amendments will be pursued. If supported, the draft amendments along with the supporting suite of documents will be submitted to the Hobart City Council for its consideration.

In addition, I refer to your Director for Planning's letter dated 30 October 2018.

Thank you for your feedback on the draft amendments to the Macquarie Point Site Development Plan.

The revised version of the planning report and amendments integrates the Council's comments. I note the following:

- The Corporation will provide a 'show revisions' document upon finalisation of the amendments to guide the public's understanding of the revisions made.
- Table 32.3 has now been included in the draft amendments.

View lines:

- The planning report has been amended to reflect reorganisation of the site under the Reset Masterplan with view lines 3 and 4 amended and replaced with views 9 and 10.
- A new view line 11 has also been added from the Cove Floor back to the Cenotaph to the NW.

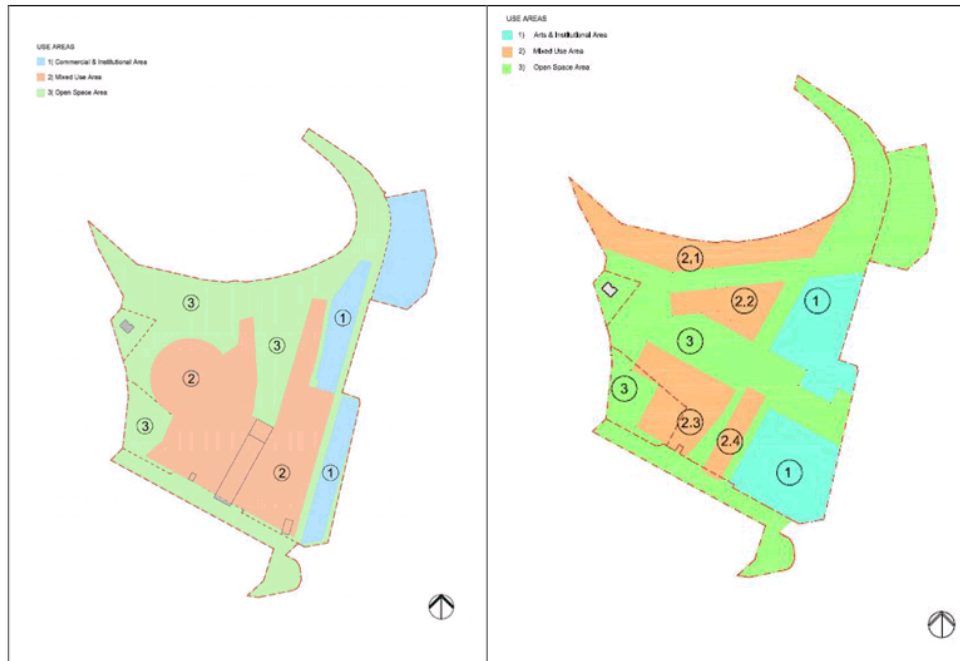

Use Tables:

- Exhibition centre is defined under Part G the Sullivans Cove Planning Scheme. This definition will apply to the Site Development Plan.

Changes to Use Table 32.5.1 for Arts and Institutional Use Area

- Reapply the three Use Areas as shown below with a replacement Figure 32.1;
- Rename the Commercial and Institutional Use Area 1 to Arts and Institutional;
- Remove Gambling Premises, Hospital Services and Recreational Boating Facility Uses from the Use Table at 32.5.1. Those Uses are not considered either desirable or practical under the Reset Masterplan and consequently are now proposed to be prohibited;
- Insert Light Industry as a Discretionary Use to allow consideration of small manufacturing or processing uses that will not cause a nuisance and be compatible with the character of the area;
- Move Passive Recreation from Discretionary to an Exempt Use;
- Insert Exhibition Centre and Minor Sport and Recreation as Permitted Uses;
- Insert Commercial Port Operations as a Discretionary Use to allow for a transition to the working port;
- Remove Recreational Boating Facility as a Discretionary Use with the effect that is now Prohibited within this Art sand Institutional Area; and

- Inserts Major Sport and Recreation, Railway Terminal and Service Industry as Discretionary Uses. Major Sport and Recreation is already a Discretionary Use in the Mixed Use Area under the existing Site Development Plan. It is considered appropriate that such Uses can be considered given the intention for Mac Point to act as a major public event space.

Existing Figure 32.1

Proposed replacement Figure 32.1

#### Changes to Use Table 32.5.2 for Mixed Use Area

Amend the Use Table at 32.5.2 to:

- Move Passive Recreation from Discretionary to an Exempt Use;
- Insert Childcare Centre and Exhibition Centre as a Permitted Uses;
- Insert Manufacturing Sales as a Permitted Use in the Goods Shed with that use otherwise remaining Discretionary;
- Move Minor Sport and Recreation from Discretionary to Permitted and Inserts Major Sport and Recreation as a Discretionary Use;
- Insert Light Industry as a Discretionary Use for the reasons discussed above;
- Amend the use condition for Car Park to continue the Permitted status of a carpark adjacent to the escarpment given the change from Open Space Area to Mixed Use area under replacement Figure 32.1 (currently permitted in the same location);
- Insert a new Use Condition for Residential Accommodation to make it only permitted in Areas 2.1 and 2.2 of Figure 32.1 where above ground floor level (except for access);

- Remove Recreational Boating Facility on the basis that this Use Area does not have direct access to the water and is therefore, not suitable for marinas and the like; and
- Insert Warehouse as a Discretionary Use.

**Changes to Use Table 32.5.3 for Open Space Use Area**

Amends the Use Table at 32.5.3 to:

- Remove the reference to the 'Escarpment Park' from the use condition for Car Park in the Open Space Area to reflect the amended spatial application of the Use areas under Figure 32.1. The Permitted status for a carpark adjacent to the escarpment is maintained through an amendment to the Car Park use condition;
- Insert Car Park as a Discretionary Use on the condition that the use is underground. The Interim Use Clause will allow for the granting of a temporary planning permit for parking on grade; and
- Insert Research and Development Centre as a Discretionary Use subject to the condition that the use is directly associated with a use in the Arts and Institutional Area. This would allow for the possibility of some connection for a research and development complex between the two Building Areas on either side of the Key Public Space. Any associated development would be outside the permitted building envelopes under Figure 32.3 and subject to the desired Future Character Statements, including the need to preserve important view lines and the central Key Public Space.

**Use Standards:**

- Section 32.6.2 has been amended to apply more generally to Residential and Visitor Accommodation Uses throughout the site to protect residential amenity and reduce land use conflict.
- The standard has also been amended to require Residential Uses to protect themselves from noise disturbance from amplified music in event spaces.

**Building form:**

- Following advice from Leigh Woolley the building envelopes on the eastern side of the escarpment have been revised on Figures 32.3 and 32.4 and are now setback from the toe of the escarpment and to maintain a view corridor to the SE to allow views back to the Cenotaph from the Cove Floor.
- P1 of clause 32.7.2 has been amended to ensure that buildings adjacent to the headland do not protrude above the escarpment when viewed from the Cenotaph.

**Building Alignment:**

- Clause 32.7.3 A1 has been amended such that buildings located within the Building Areas on Figure 32.3 and within 20m of a frontage to a primary or secondary space are to align the edge of that space for a minimum of 70 per cent of the width of the building facing that frontage.

**Building Form:**

- The pedestrian link through building C is covered by clause 32.7.11 - provide a 6m wide publicly accessible link within 10m of the pedestrian link as shown on Figure 32.3. The intent is to provide flexibility for the exact location to move around if necessary to accommodate a specific building footprint.

Please do not hesitate to contact the CEO should you wish to discuss how the Corporation has integrated the Council's comments into the amendments.

It should be noted that if the Council exercises the option under s39G(5) of the Act, which is if the Council resolves not to support all or part of the proposed planning amendments, I would appreciate your advice on the Council's view as to the amendments which would be required to be made to address concerns.

Feedback on the first stage is to be provided to the CEO, Mary Massina on [mary@macquariepoint.com](mailto:mary@macquariepoint.com) or posted to GPO Box 251, Hobart 7001 by 23 January 2019.

Any questions please contact the CEO either via email or 0408 594 312.

Yours sincerely,

A handwritten signature in blue ink, appearing to read 'B. Scullin', with a stylized flourish at the end.

Brian Scullin  
Chairman  
2 January 2019

Attachment: Planning Scheme Amendments to *Sullivans Cove Planning Scheme 1997*

## Amendments to Sullivans Cove Planning Scheme 1997

### Amendment - 1

Amend the parking policy objectives for the Sullivans Cove 'Gateway' Activity Area 3.0 under Section 26.3 of the SCPS1997 as follows:

Activity Area 3.0 will balance a prioritisation of pedestrian and cycling access to the Macquarie Point site with the need to provide for efficient private vehicle access and the requirement to maintain heavy vehicle access to the port.

The Macquarie Point site will be reconnected to its surrounds through the introduction of a number of pedestrian and cycle links. The Escarpment Park will connect connecting the city and Sullivans Cove to the Regatta Grounds and beyond, and similarly the Water to Water Promenade will connect Sullivans Cove to the Regatta Grounds. It will be possible to move from the Gateway Park, Evans Street and Regatta Grounds these pathways through the network of shared streets and lanes to the Key Public Space to the north of the Goods Shed at the heart of the site shown on Figure 32.3 Macquarie Point Development Framework Plan.

The network of shared streets and lanes is scaled at a width that allows a number of configurations; they can be open to one or two-way traffic, or closed to traffic altogether over the course of a single day. Access by emergency and service vehicles will be possible through removable bollards. A series of public open spaces or pocket parks will sit within this pedestrian-oriented network.

The Evans Street frontage offers a convenient arrival point to the Macquarie Point site. Some onstreet car parking will be provided along this edge; however, access for vehicular traffic into the site will be limited. Cars will generally be limited to the access links identified in the Development Framework of the Macquarie Point Site Development Plan, with car parking structures located immediately behind the buildings on Evans Street. Only a small amount of on-street car parking will be provided within the Macquarie Point site. Development including new on-site car parking must demonstrate that the associated traffic movements can be accommodated within the surrounding road network.

A pedestrian and cycle link to connect the city to the Regatta Grounds and beyond will be provided through the site positioned where the Tasman Highway enters Davey Street. with commuter bicycle parking and change facilities where the link connects with the road network at the southern end will be provided at this location.

A public car park is proposed adjacent to the escarpment, with access from the Tasman Highway.

Future transportation corridors will be preserved for the movement of public transport and heavy vehicles.

*Note: additions to existing clauses shown as underline, deletions to existing clauses shown as strikethrough*

### Amendment – 2

Replace Section 32 of the SCPS1997 as follows:

**32.0 Macquarie Point Site Development Plan****32.1 Purpose of the Site Development Plan**

32.1.1 To implement the Macquarie Point Reset Masterplan 2017-2030.

32.1.2 To ensure that Macquarie Point is redeveloped:

- (a) as a vibrant and active area, with a mix of uses, that connects with and complements adjacent areas within Hobart;
- (b) to encourage inner city living;
- (c) to deliver sustainable social and economic benefits to Hobart;
- (d) in accordance with sound planning, urban design and environmental principles; and
- (e) to protect the operation of the Port of Hobart for the benefit of the local, regional, state and national economy.

**32.2 Application of the Site Development Plan****32.2.1 Planning Area**

This Site Development Plan applies to the area of land designated as 'Macquarie Point Site Development Plan' on Figure 4 of this Scheme.

**32.2.2 Control of Use and Development**

Subject to the other relevant requirements of this Scheme, the Planning Authority is bound to grant a permit for applications for 'use' and 'development' designated as 'permitted' in all of the relevant provisions of this Site Development Plan, but may impose conditions.

The Planning Authority has a discretion to refuse or permit applications for 'use' and 'development' designated as 'discretionary' in any of the relevant provisions of this Site Development Plan and may impose conditions.

All other 'uses' and 'development' are 'prohibited'.

**32.2.3 Exempt Development**

The following development is exempt from requiring a permit:

- (a) Works associated with the investigation of land contamination;
- (b) Public art;
- (c) Maintenance and repair by or on behalf of the State Government, a Council, a statutory authority, or a corporation all the shares of which are held by or on behalf of the State or by a statutory authority, of:
  - i. Electricity, gas, sewerage, stormwater and water reticulation to individual streets, lots or buildings;
  - ii. Infrastructure such as roads, rail lines, footpaths, cycle paths, drains, sewers, power lines and pipelines; and
  - iii. Minor infrastructure such as footpaths and cycle paths, playground equipment, seating and shelters, telephone booths, post boxes, bike racks, fire hydrants, drinking fountains, rubbish bins, public art, traffic control devices and markings, and the like on public land.

**32.2.4 Land decontamination**

The undertaking of works to remediate land are permitted.

**32.2.5 Definitions**

|                                |  |
|--------------------------------|--|
| <i>Activity Centre Network</i> | Means the Activity Centre Network in Table 1 of the <i>Southern Tasmania Regional Land Use Strategy 2010 - 2035</i> .  |
| <i>Cove Floor</i>              | The reclaimed areas of Macquarie Point to the east of the Natural Shoreline shown on Figure 32.3.  |
| <i>Environmental Audit</i>     | Means a report prepared by a Suitably Qualified Person (Site Contamination) on the nature, extent and levels of existing contamination and the actual or potential risk to human health or the environment, on or off the site, resulting from that contamination, prepared in accordance with the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended 16 May 2013.  |
| <i>Environmental Harm</i>      | Means 'environmental harm' as described in section 5 of the <i>Environmental Management and Pollution Control Act 1994</i> and includes an environmental nuisance.   |
| <i>Environmental Nuisance</i>  | Means an 'environmental nuisance' as described in section 3 of the <i>Environmental Management and Pollution Control Act 1994</i> .  |
| <i>Height</i>                  | For development inside the areas shown on Figure 32.4 means the uppermost part of a building excluding minor protrusions such as aerials, antennae, solar panels, chimneys and vents measured in Australian Height Datum (AHD).<br>For development outside the areas shown on Figure 32.4, the vertical distance from existing ground level at any point to the uppermost part of a building directly above that point, excluding minor protrusions such as aerials, antennae, solar panels, chimneys and vents. |
| <i>Primary Space</i>           | Key Public Spaces shown on Figure 32.3, and Evans Street.  |
| <i>Secondary Space</i>         | Smaller roads, lanes, alleys and ad hoc courts shown as Important Pedestrian Links shown on Figure 32.3.   |
| <i>Sensitive Use</i>           | Means a residential use or a use involving the presence of people for extended periods of time, except in the course of their employment, such as a caravan park, childcare centre, dwelling, hospital or school.  |

|   |  |
|---|--|
| <i>Site-Specific Report</i>                           | Means an environmental impact assessment carried out by a Suitably Qualified Person (Emissions), which meets the technical components of section 74 of the <i>Environmental Management and Pollution Control Act 1994</i> and includes the impact of building design, layout and construction of the development to eliminate, mitigate or manage effects of emissions to ensure that a proposed use will not be unreasonably impacted by environmental harm caused by the operations of the Macquarie Point Wastewater Treatment Plant. |
| <i>Suitably Qualified Person (Emissions)</i>          | Means a person who, in the opinion of the planning authority, can demonstrate that a proposed use will not be unreasonably impacted by environmental harm caused by the operations of the Macquarie Point Wastewater Treatment Plant.  |
| <i>Suitably Qualified Person (Site Contamination)</i> | Means a person appointed as an accredited environmental auditor in accordance with section 39F of the <i>Macquarie Point Development Corporation Act 2012</i> .  |

**32.2.6 Interim Use and Development**

Notwithstanding the requirements of Clauses 32.3, 32.5, 32.7.1, 32.7.2, 32.7.3, 32.7.4, 32.7.5, 32.7.6, 32.7.7, 32.7.8, 32.7.10 and 32.10, the Planning Authority has discretion to approve temporary use and development for a period not exceeding 5 years providing buildings are located and designed in a manner that does not prejudice the future development of the area or appropriate pedestrian, cycle and vehicle linkages through the site to adjacent Activity Areas.

**32.3** Desired Future Character Statements

| Desired Future Character Statements  | Implementation Strategy                               |
|--|---|
| <p>Development of Activity Area 3.0 will:</p> <p>32.3.1 Re-engage with its history by revealing layers of the changing nature of Macquarie Point over time through expression of the topography, natural shoreline, Round House, Goods Shed, Royal Engineers Building and Red Shed.</p> <p>32.3.2 Ensure that development respects the setting and appreciation of the cultural heritage significance of the Royal Engineers Building.</p> <p>32.3.3 Ensure that development does not adversely impact on the cultural heritage and reverential ambience of the Hobart Cenotaph and its surrounds.</p> <p>32.3.4 Acknowledge the footprint of the former railway Round House as shown on Figure 32.3 and the associated Table 32.3.</p> <p>32.3.5 Protect the operation of the Port of Hobart for the benefit of the local, regional, state and national economy by:</p> <ul style="list-style-type: none"> <li>• Providing a buffer of non-sensitive uses in the buildings along the port interface to avoid constraints on the working port;</li> <li>• Ensuring that sensitive uses are separated and treated so as not to be vulnerable to noise, air, vibration and lighting impacts;</li> <li>• Incorporating appropriate design responses to avoid conflict between mixed-use, pedestrian and industrial vehicular traffic associated with the Port of Hobart along Evans Street;</li> <li>• Ensuring compliance with relevant safety and hazard distances as specified in relevant Australian</li> </ul> | <p>Use and Development Standards and clause 32.4.</p> |

| Desired Future Character Statements   | Implementation Strategy |
|---|-------------------------|
| <p style="text-align: center;">standards; and</p> <ul style="list-style-type: none"> <li>• Preserving the opportunity for a future connection to the Port of Hobart from the north via the Regatta Grounds.</li> </ul> <p>32.3.6 Provide for recreation and associated uses in designated open spaces as shown on Figure 32.3 and the associated Table 32.3.</p> <p>32.3.7 Ensure that the bulk, siting and height of buildings are sympathetic to the natural topography of the headland, amphitheatre, and escarpment surrounding the Cenotaph and reinforce the natural shoreline with freestanding buildings viewed in the round on the Cove Floor.</p> <p>32.3.8 Not unreasonably impact on important views, including the following shown on Figure 32.2:</p> <ul style="list-style-type: none"> <li>• From the Cenotaph toward the mouth of the Derwent River, including the flat river plane that extends to the horizon;</li> <li>• From the Cenotaph to the horizon of the natural amphitheatre, including the Wellington Range descending to the Mount Nelson ridge, then to Porter Hill and down to the water plane at Long Point, Lower Sandy Bay;</li> <li>• From the Cenotaph to St George's Church;</li> <li>• From the Cenotaph to the Parliament House forecourt along Morrison Street;</li> <li>• The views across the Cove toward the Cenotaph, including from Macquarie Street, the forecourt of the Princes Wharf No. 1 Shed; the Paddock between Princes Wharf No. 1 Shed and the Institute for Marine and Antarctic Studies (IMAS), Runnymede Street and the open space at the eastern end of the IMAS building;</li> </ul> |                         |

| Desired Future Character Statements   | Implementation Strategy |
|---|-------------------------|
| <ul style="list-style-type: none"> <li>• The view of the sunrise from the grounds of the Cenotaph on Anzac Day;</li> <li>• To and from Sullivans Cove and the Derwent River aligning NE/SW;</li> <li>• From the Royal Engineers Building to Kangaroo Bay;</li> <li>• Along the Key Public Space; and</li> <li>• To and from the Key Public Space and Cove Floor to the Cenotaph.</li> </ul> <p>32.3.9 To and from Davey Street and the entry to the Key Public Space. Ensure that the design and appearance of roofs provide interest when viewed from the elevated areas of the Cenotaph and Domain through measures that may include incorporation of, rooftop gardens or articulated roof forms that serve a purpose such as daylighting of internal areas.</p> <p>32.3.10 Establish and reinforce a well-defined built edge to Evans Street, set back to highlight the Goods Shed as a public entry point to the site.</p> <p>32.3.11 Include a network of connections through and around the site as shown on Figure 32.3 and the associated Table 32.3, including a series of:</p> <ul style="list-style-type: none"> <li>• Primary shared street spaces extending north from Evans Street and east from Tasman Highway towards the centre of the site; and</li> <li>• Smaller and more intimate secondary spaces that provide permeability across the site. Their position can be adjusted to suit the preferred building form, siting and lot size/s.</li> </ul> <p>32.3.12 Include a direct pedestrian link between the Key Public Space and Cenotaph that traverses the escarpment.</p> |                         |

|  |  |
|--|--|
| <p>32.3.13 Include a gateway building in area D shown on Figure 32.3 that provides interest and maintains view lines at ground level to the Key Public Space from Davey Street and forms the southern edge of the central Key Public Space; and</p> <p>32.3.14 Ensure that developments for noise sensitive uses are adequately designed and constructed to protect residential amenity and reduce the potential for land use conflict that may compromise the use of Macquarie Point as a major public event space.</p> |  |
|--|--|

#### **32.4 Matters to be Considered**

In considering applications and any conditions to be imposed on 'use' and 'development', the Planning Authority must consider:

- The Desired Future Character Statements in clause 32.3;
- The preferred treatment of robust, self-pigmented external materials and finishes to primary and secondary spaces;
- The suitability of proposed development to achieve satisfactory levels of safety and amenity of occupants including the avoidance of vulnerability to noise, air, vibration and lighting impacts from the Port of Hobart;
- The potential for land use conflict between the proposed use and development and the use of Macquarie Point for major public events;
- The impact on the operation of the Port of Hobart;
- The height of buildings within Activity Area 3.0, and on adjoining and adjacent lots;
- The bulk and form of existing and proposed buildings;
- The spatial characteristics of the streets and spaces and the quality of the environment;
- Protection of water quality and water sensitive urban design principles;
- Protection of public infrastructure and the environment;
- Impacts from land decontamination works, and the need for uses not to commence until relevant areas of the site have been appropriately remediated;
- The quality of the architectural design;
- The adequacy and capacity of existing infrastructure and services including roads, footpaths, water, sewerage and power to cater for the proposed development; and
- The Strategic Principles in Appendix A of the Macquarie Point Reset Masterplan 2017-2030.

**32.5 Use Table**

The 'Macquarie Point Site Development Plan' area is divided into three use area types as shown on Figure 32.1.

**32.5.1 Uses within Use Area 1: Arts and Institutional Area**

| Use Class                                       | Condition   |
|---|---|
| Exempt  |   |
| Occasional sporting, social and cultural events |   |
| Passive Recreation                              |   |
| Permitted                                       |   |
| Art and Craft Centre                            |   |
| Arts and Cultural Centre                        |   |
| Car Park  | Except if on ground floor level and within 8 metres of the front of a building that faces a primary or secondary space. |
| Community Centre                                |   |
| Eating Establishment                            |   |
| Education Centre                                | Except for secondary or primary school  |
| Exhibition Centre                               |   |
| Function Centre                                 |   |
| Market  |   |
| Minor Sport and Recreation                      |   |
| Office  |   |
| Public Display Office                           |   |
| Public Transport Facility                       |   |
| Research and Development Centre                 |   |
| Shop  |   |
| Utility Installation                            |   |
| Discretionary                                   |   |
| Commercial Port Operations                      |   |
| Hotel   | Except for accommodation  |
| Light Industry                                  |   |
| Major Sport and Recreation                      |   |
| Manufacturing Sales                             |   |

|                    |  |
|--------------------|--|
| Place of Worship   |  |
| Railway Terminal   |  |
| Service Industry   |  |
| Transport Terminal |  |
| Warehouse          |  |
| <b>Prohibited</b>  |  |
| All other uses     |  |

### 32.5.2 Uses within Use Area 2: Mixed Use Area

| Use Class                                       | Condition   |
|---|---|
| <b>Exempt</b>                                   |   |
| Occasional sporting, social and cultural events |   |
| Passive Recreation                              |   |
| <b>Permitted</b>                                |   |
| Art and Craft Centre                            |   |
| Arts and Cultural Centre                        |   |
| Car Park  | Except if not adjacent to the escarpment and on ground floor level and within 8 metres of the front of a building that faces a primary or secondary space |
| Child Care Centre                               |   |
| Community Centre                                |   |
| Eating Establishment                            |   |
| Education Centre                                |   |
| Exhibition Centre                               |   |
| Function Centre                                 |   |
| Hospital Services                               |   |
| Hotel   | Only if above ground floor level where fronting Evans Street.   |
| Market  |   |
| Manufacturing Sales                             | Only if in the Goods Shed   |
| Minor Sports and Recreation                     |   |
| Office  |   |

|                                 |   |
|---------------------------------|---|
| Place of Worship                |   |
| Public Display Office           |   |
| Public Transport Facility       |   |
| Railway Terminal                |   |
| Research and Development Centre |   |
| Residential Accommodation       | Only if in Areas 2.1 and 2.2 on Figure 32.1 and above ground floor level except for access.                             |
| Shop                            |   |
| Utility Installation            |   |
| Visitor Accommodation           | Except if on ground floor level and within 8 metres of the front of a building that faces a primary or secondary space. |
| <b>Discretionary</b>            |   |
| Light Industry                  |   |
| Major Sport and Recreation      |   |
| Manufacturing Sales             |   |
| Transport Terminal              |   |
| Warehouse                       |   |
| <b>Prohibited</b>               |   |
| All other uses                  |   |

### 32.5.3 Uses within Use Area 3: Open Space Area

| Use Class                                       | Condition  |
|---|--|
| <b>Exempt</b>                                   |  |
| Occasional sporting, social and cultural events |  |
| Passive Recreation                              |  |
| <b>Permitted</b>                                |  |
| Car Park  | Only in the Art School car park (47 Hunter Street) or associated with the use of the Royal Engineers Building. |
| Community Centre                                |  |

|                                 |  |
|---------------------------------|--|
| Market                          |  |
| Office                          | Only in the Royal Engineers Building.                                      |
| Public Transport Facility       |  |
| <b>Discretionary</b>            |  |
| Art and Craft Centre            |  |
| Arts and Cultural Centre        |  |
| Car Park                        | Only if underground  |
| Child Care Centre               |  |
| Eating Establishment            |  |
| Minor Sports and Recreation     |  |
| Railway Terminal                |  |
| Recreational Boating Facility   |  |
| Research and Development Centre | Only if directly associated with a use in the Arts and Institutional Area. |
| Shop                            |  |
| Transport Terminal              |  |
| Utility Installation            |  |
| <b>Prohibited</b>               |  |
| All other uses                  |  |

**32.6 Use Standards****32.6.1 Mixed Use**

|   |   |  |
|---|---|--|
| Objective:  | To ensure that Activity Area 3.0 is developed with a mix of uses. |  |
| <b>Deemed to Comply (Permitted)</b>   |   | <b>Performance Criteria (Discretionary)</b>  |
| <b>A1</b><br>The total combined floor area of the following uses does not exceed: <ul style="list-style-type: none"> <li>(a) Shop: 10,000 m<sup>2</sup></li> <li>(b) Research and Development Centre and Education Centre: 35,000 m<sup>2</sup></li> <li>(c) Office: 30,000 m<sup>2</sup></li> <li>(d) Residential Accommodation: 15,000m<sup>2</sup></li> <li>(e) Hotel and Visitor Accommodation: 20,000 m<sup>2</sup></li> </ul> |   | <b>P1</b><br>Uses must contribute to the interest and activity of Macquarie Point as a mixed use area having regard to the following: <ul style="list-style-type: none"> <li>(a) Provide for a diversity of uses at densities responsive to the character of streetscapes and public spaces;</li> <li>(b) Encourage use at street level that generates activity and pedestrian movement through the area;</li> <li>(c) Ensure that shop and office uses are consistent with the Activity Centre Network and do not have an unacceptable impact on the Hobart CBD.</li> </ul> |

**32.6.2 Residential and Visitor Accommodation Uses**

|   |   |   |
|---|---|---|
| Objective:  | <ul style="list-style-type: none"> <li>(a) Ensure appropriate levels of safety and amenity for residential and visitor accommodation;</li> <li>(b) Protect the operation of the Port of Hobart for the benefit of the local, regional, state and national economy; and</li> <li>(c) Protect the viability of Macquarie Point as a major public event space</li> </ul> |   |
| <b>Deemed to Comply (Permitted)</b>   |   | <b>Performance Criteria (Discretionary)</b>   |
| <b>A1</b><br>Residential or Visitor Accommodation development must demonstrate that design elements are able to achieve internal noise levels in accordance with relevant Australian Standards for acoustics control (including AS3671:1989 – <i>Road Traffic Noise Intrusion (Building Siting and Construction)</i> and AS2107:2000 – <i>Acoustics (Recommended Design Sound Levels and Reverberation Times for Building Interiors)</i> ). |   | <b>P1</b><br>Residential or Visitor Accommodation development is adequately protected from environmental harm from noise from transport movements, the operational port and likely noise from major public events at Macquarie Point. |

## 32.6.3 Car Parking

|  |  |   |
|--|--|---|
| Objective:   | To ensure that traffic movements associated with car parking use can be accommodated safely within the surrounding road network. |   |
| <b>Deemed to Comply (Permitted)</b>  |  | <b>Performance Criteria (Discretionary)</b>   |
| <p>A1</p> <p>The total number of car parking spaces in Activity Area 3.0, excluding Area A shown on Figure 32.4, must not exceed 350 spaces.</p> |  | <p>P1</p> <p>Traffic impacts associated with car parking must be safe and minimise any adverse impact on the efficiency of the road, having regard to:</p> <ul style="list-style-type: none"> <li>(a) The increase in traffic caused by the car parking;</li> <li>(b) The nature of the traffic generated by the car parking;</li> <li>(c) The surrounding road conditions;</li> <li>(d) The need for the use;</li> <li>(e) Any traffic impact assessment; and</li> <li>(f) Any proposed engineering works or traffic management arrangements.</li> </ul> |

### 32.7 Development Standards for Buildings or Works

#### 32.7.1 Impacts from the Working Port

| Objective:   | <ul style="list-style-type: none"> <li>(a) Ensure appropriate levels of safety and amenity for occupants of buildings; and</li> <li>(b) Protect the operation of the Port of Hobart for the benefit of the local, regional, state and national economy.</li> </ul> |
|--|--|
| Deemed to Comply (Permitted)   | Performance Criteria (Discretionary)   |
| <p>A1</p> <p>Buildings:</p> <ul style="list-style-type: none"> <li>(a) Within 50 metres of the boundary adjoining the Port of Hobart must include design elements that are able to achieve internal noise levels in accordance with the relevant Australian Standards for acoustics control (including AS3671:1989 – <i>Road Traffic Noise Intrusion (Building Siting and Construction)</i>, and AS2107:2000 – <i>Acoustics (Recommended Design Sound Levels and Reverberation Times for Building Interiors)</i>);</li> <li>(b) Within 20 metres of the boundary adjoining the Port of Hobart must not have private outdoor areas, decks or balconies; and</li> <li>(c) Within 10 metres of the boundary adjoining the Port of Hobart must only have fixed windows (non-opening).</li> </ul> | <p>P1</p> <p>Buildings are adequately protected from noise arising from port activities including the movement of heavy vehicles to safeguard occupants' health and amenity.</p>   |

## 32.7.2 Building Form

|                              |   |
|------------------------------|---|
| Objective:                   | Ensure the height and form of buildings are: <ul style="list-style-type: none"><li>(a) Consistent with established building forms within Sullivans Cove;</li><li>(b) Sympathetic to the natural topography of Sullivans Cove, including the amphitheatre sloping down to the Cove with the headland and escarpment surrounding the Cenotaph forming a natural expression of the Cove Wall;</li><li>(c) Respectful of the low-lying nature of the site and its visibility from surrounding elevated areas.</li></ul> |
| Deemed to Comply (Permitted) | Performance Criteria (Discretionary)  |

|   |   |
|---|---|
| <p>A1</p> <p>Building height must be no more than:</p> <ul style="list-style-type: none"> <li>(a) The permitted heights for areas shown in Figure 32.4 and associated Table 32.3; or</li> <li>(b) 6 metres if outside the areas shown on Figure 32.4 and associated Table 32.3</li> </ul> | <p>P1</p> <p>Building height is consistent with the streetscape, urban form and character of the surrounding area, having regard to:</p> <ul style="list-style-type: none"> <li>(a) The Desired Future Character Statements in clause 32.3;</li> <li>(b) The protection of important views shown in Figure 32.2;</li> <li>(c) The apparent height when viewed from the Cenotaph and the southern side of the Cove;</li> <li>(d) The overshadowing of existing and proposed buildings and of the Key Public Spaces as shown in Figure 32.3 and the associated Table 32.3;</li> <li>(e) The individual prominence of the building and its contrast with neighbouring buildings;</li> <li>(f) The architectural and design merit of the building itself;</li> <li>(g) The contribution the building will make to Macquarie Point and the City of Hobart more generally in terms of architectural character and quality;</li> <li>(h) The extent and nature of the contribution that the building and its use will make to the economic activity of Macquarie Point and in the City of Hobart;</li> <li>(i) The extent and nature of the contribution that the building and its use will make to the reputation of the City of Hobart as an international destination; and</li> <li>(j) The civic amenity of the building.</li> </ul> <p>Buildings sited adjacent to the headland are not to protrude above the escarpment when viewed from the Cenotaph.</p> |
|---|---|

|   |  |
|---|--|
| <p>A2</p> <p>There is no Deemed to Comply standard for roof form for buildings with a floor area greater than 300m<sup>2</sup>.</p> | <p>P2</p> <p>Roof form:</p> <ul style="list-style-type: none"> <li>(a) Contributes to the articulation of building form;</li> <li>(b) Contributes to the integration of new buildings into the surrounding area; and</li> <li>(c) Provides architectural interest when viewed from elevated areas.</li> </ul>  |
| <p>A3</p> <p>Buildings are sited within the areas shown in Figure 32.3 and the associated Table 32.3.</p>                           | <p>P3</p> <p>Building form minimises apparent size and bulk having regard to:</p> <ul style="list-style-type: none"> <li>(a) The Desired Future Character Statements in clause 32.3;</li> <li>(b) The facilitation of secondary spaces;</li> <li>(c) The visual prominence of the building when viewed from public spaces; and</li> <li>(d) The use of design measures such as vertical articulation.</li> </ul> |

## 32.7.3 Building Alignment

| Objective:  | To ensure that the alignment of buildings forms roads and other public spaces. |  |
|---|--|--|
| Deemed to Comply (Permitted)  |  | Performance Criteria (Discretionary)   |
| <p><b>A1</b></p> <p>Buildings located within the Building Areas on Figure 32.3 and within 20m of a frontage to a primary or secondary space are to align the edge of that space for a minimum of 70% of the width of the building facing that frontage.</p> |  | <p><b>P1</b></p> <p>Buildings must:</p> <ul style="list-style-type: none"> <li>(a) be sited and aligned having regard to the Desired Future Character Statements in clause 32.3 and the intended spaces shown on Figure 32.3 and associated Table 32.3; and</li> <li>(b) Where fronting onto a primary or secondary space, the alignment of buildings may include irregular shapes provided that the overall impression is of retention of continuous alignment of the space.</li> </ul> |

## 32.7.4 Building Alignment to Evans Street

| Objective:  | Establish and reinforce a well-defined built edge to Evans Street, set back to highlight the Goods Shed as a public entry point to the site.  |
|---|---|
| Deemed to Comply (Permitted)  | Performance Criteria (Discretionary)  |
| <p>A1</p> <p>Building setback from Evans Street must be 3 metres.</p> | <p>P1</p> <p>Building setback must:</p> <ul style="list-style-type: none"> <li>(a) Be compatible with the setback of adjoining buildings and the streetscape;</li> <li>(b) Only be sited closer to Evans Street where it can be demonstrated that it is sufficiently setback from the alignment of the Goods Shed to highlight that building within the streetscape; and</li> <li>(c) Only provide variations in building alignment to break up long building façades, provided that no potential concealment or entrapment opportunities are created.</li> </ul> |

## 32.7.5 Building Alignment – Adjacent to the escarpment (Use Area 2 adjacent to the escarpment on Figure 32.1)

| Objective:  | To ensure that the siting and alignment of buildings adjacent to the escarpment are sympathetic to the natural topography of the headland, amphitheatre and escarpment surrounding the Cenotaph and reinforce the natural shoreline. |
|---|--|
| Deemed to Comply (Permitted)  | Performance Criteria (Discretionary)   |
| <p>A1</p> <p>Buildings adjacent to the escarpment are sited in Area A shown on Figure 32.4.</p> | <p>P1</p> <p>Buildings must be sited and aligned having regard to the Desired Future Character Statements in clause 32.3.</p>  |

## 32.7.6 Design

| Objective:                   | To ensure that building façades promote and maintain high levels of pedestrian interest, amenity and safety.  |  |
|------------------------------|---|--|
| Deemed to Comply (Permitted) |   | Performance Criteria (Discretionary)   |
| A1                           | Buildings must comply with the following:   | P1   |
| (a)                          | Provide the main pedestrian access to the building so that it is visible from the road or publicly accessible areas of the site;  | Buildings must be designed to enhance the streetscape by:  |
| (b)                          | Ground floor façades facing a primary or secondary space must comprise a surface area of no less than 40 per cent consisting of windows or doorways; and  | (a) Providing a pedestrian access to the building that addresses the street or other public place;   |
| (c)                          | Ground floor facades facing a primary or secondary space must not comprise a single length of blank wall greater than 30 per cent of the total façade on that frontage.                                 | (b) Providing for passive surveillance of public spaces; and   |
|                              |   | (c) Treating large expanses of blank wall in the front façade and façades facing other public space boundaries with architectural detail or public art so as to contribute positively to the streetscape and public space. |
| A2                           | Mechanical plant and other service infrastructure, such as heat pumps, air conditioning units, switchboards, hot water units and the like, must not be visible from the street and other public places. | P2   |
|                              |   | Mechanical plant and other service infrastructure, such as heat pumps, air conditioning units, switchboards, hot water units and the like, when viewed from the street or other public places, must not detract from:      |
|                              |   | (a) The visual qualities of the streetscape; and   |
|                              |   | (b) The amenity of pedestrians through noise, air movement, dust or similar.   |
| A3                           | Security shutters or grilles must not be fitted over windows or doors on façades facing a primary or secondary space or other public place.   | P3   |
|                              |   | Security shutters or grilles over windows or doors on a façade facing the frontage or other public spaces are only provided if it is essential for the security of the premises and no other alternatives are feasible.    |

## 32.7.7 Roof Mounted Mechanical Plant

|                                     |  |  |
|-------------------------------------|--|--|
| Objective:                          | Rooftop mechanical plant is to be unobtrusive when viewed from elevated areas including the Cenotaph and surrounding areas.  |  |
| <b>Deemed to Comply (Permitted)</b> |  | <b>Performance Criteria (Discretionary)</b>  |
| A1                                  | Buildings are to achieve one or more of the following:<br><br>(a) Roof-top mechanical plant and service infrastructure, including lift structures, must be contained within the roof;<br><br>(b) Roof-top mechanical plant is to be screened from public view including from the Cenotaph and surrounding areas. | P1<br><br>Rooftop mechanical plant is to be sited and treated so as to be unobtrusive when viewed from the Cenotaph and surrounding areas. |

## 32.7.8 Outdoor Storage Areas

|                                     |   |   |
|-------------------------------------|---|---|
| Objective:                          | To ensure outdoor storage areas do not visually detract from the area.  |   |
| <b>Deemed to Comply (Permitted)</b> |   | <b>Performance Criteria (Discretionary)</b>   |
| A1                                  | Outdoor storage areas must:<br><br>(a) Be located behind the façade of the building; and<br><br>(b) All goods and materials stored must be screened from public view. | P1<br><br>Outdoor storage areas must be located, treated or screened to minimise adverse impacts on the visual amenity of the area. |

## 32.7.9 Inundation Hazard

|                                     |  |   |
|-------------------------------------|--|---|
| Objective:                          | To ensure the risk from coastal inundation is appropriately managed.   |   |
| <b>Deemed to Comply (Permitted)</b> |  | <b>Performance Criteria (Discretionary)</b> |
| A1                                  | The finished floor level of a habitable room must be not less than 2.8 metres above the Australian Height Datum (AHD). | P1<br><br>No performance criteria.          |

## 32.7.10 Pedestrian Links

| Objective:  | To provide a network of pedestrian connections.   |
|---|---|
| Deemed to Comply (Permitted)  | Performance Criteria (Discretionary)  |
| <p><b>A1</b></p> <p>A minimum 6 metres wide publicly accessible pedestrian lane or arcade is provided within 10 metres of a pedestrian link shown on Figure 32.3 and the associated Table 32.3.</p> | <p><b>P1</b></p> <p>Buildings must compliment a network of pedestrian connections having regard to:</p> <p>(a) The Desired Future Character Statements in clause 32.3; and</p> <p>(b) The Strategic Principles in Appendix A of the Macquarie Point Reset Masterplan 2017-2030.</p> |

### 32.8 Development Standards for Subdivision

#### 32.8.1 Subdivision

| Objective:   | To ensure that subdivision of land is consistent with achieving the desired layout of buildings and spaces and occurs in a coordinated manner with its use and development. |   |
|--|---|---|
| Deemed to Comply (Permitted)   |   | Performance Criteria (Discretionary)  |
| <p>A1</p> <p>Each lot must:</p> <p>(a) Have an area, dimensions and layout consistent with the building areas within the Macquarie Point Development Framework Plan as shown in Figure 32.3 and the associated Table 32.3;</p> <p>(b) Be required for public use by the State Government, a Council, a statutory authority, or a corporation all the shares of which are held by or on behalf of the State, Council or by a statutory authority; or</p> <p>(c) Be required for the provision of Utilities.</p> |   | <p>P1</p> <p>(a) Subdivision of land is for the purposes of facilitating the desired use and development of land having regard to the layout of buildings and spaces outlined in the Macquarie Point Development Framework Plan as shown in Figure 32.3 and the associated Table 32.3 and forms part of an application for that use and development; or</p> <p>(b) Subdivision of land ensures that each lot:</p> <ul style="list-style-type: none"> <li>i. has a sufficient area, dimensions and frontage to public space for its intended use;</li> <li>ii. provides for sufficient spaces and connection through the site; and</li> <li>iii. facilitates the articulation of building form by minimising building bulk; and</li> <li>iv. does not frustrate the opportunity for a future alternative access to the Port of Hobart via the Regatta Grounds from the north:</li> </ul> <p>having regard to the desired layout of building and spaces shown in Figure 32.3 and the associated Table 32.3, the location of existing and approved buildings and the Desired Future Character Statements in clause 32.3.</p> |

|   |   |
|---|---|
| <p><b>A2</b></p> <p>Each lot must have a frontage, or legal connection to a road by a right of carriageway, of not less than 3.6 metres.</p>  | <p><b>P2</b></p> <p>Each lot, must be provided with a frontage or legal connection to a road by a right of carriageway, that is sufficient for the intended use, having regard to:</p> <ul style="list-style-type: none"> <li>(a) The number of other lots which have the land subject to the right of carriageway as their sole or principal means of access;</li> <li>(b) The functionality and usability of the frontage or access;</li> <li>(c) Existing or intended adjoining public space through which occasional vehicular access may be granted;</li> <li>(d) The anticipated nature of vehicles likely to access the site;</li> <li>(e) The ability to manoeuvre vehicles on the site;</li> <li>(f) The ability for emergency services to access the site; and</li> </ul> |
| <p><b>A3</b></p> <p>Each lot, excluding for public open space or utilities, must be capable of a connection to:</p> <ul style="list-style-type: none"> <li>(a) A reticulated potable water supply;</li> <li>(b) A reticulated sewerage system; and</li> </ul> <p>A public stormwater system able to service the building area by gravity.</p> | <p><b>P3</b></p> <p>No performance criteria.</p>  |

### **32.9 Heritage**

The heritage provisions of Schedule 1 of the Scheme apply.

### **32.10 Public Urban Space**

- 32.10.1 Prior to development within the Primary Spaces or Secondary Spaces, a planning permit is required for a civic works concept plan. The plan is to show the extent of intended civic works, including provision of essential services infrastructure, public amenities, paving, planting, location of all fixed street furniture, including trees and ground covers, artworks, free standing signs, lights and lighting concept. It is to be prepared having

regard to the Desired Future Character Statements in clause 32.3 and Matters to be Considered in clause 32.4.

- 32.10.2 A permit is not required for development in accordance with an approved civic works concept plan.

**32.11 Signage**

The Signage provisions of Schedule 4 of the Scheme apply.

**32.12 Traffic, Access and Parking**

The Traffic, Access and Parking provisions of clause 32.6.3 and Schedule 5 of the Scheme apply. The provisions of clause 32.6.3 prevail over Schedule 5 of the Scheme to the extent of any inconsistency.

**32.13 Demolition**

The Demolition provisions of Schedule 7 of the Scheme apply.

**32.14 Environmental Management**

- 32.14.1 If an accredited environmental auditor has provided a certification in accordance with section 39F(1) of the *Macquarie Point Development Corporation Act 2012*, then the land contamination objectives of Schedule 8 – Environmental Management, do not apply to any use or development which is the redevelopment referred to in such certificate.
- 32.14.2 In determining the grant of a permit for any application for use and development within the 'Macquarie Point Site Development Plan', the planning authority must not impose any condition or restriction in a planning permit which is inconsistent with, or imposes any additional requirements to, a certificate from an accredited environmental auditor given pursuant to section 39F of the *Macquarie Point Development Corporation Act 2012*.
- 32.14.3 The planning authority may grant a planning permit for remediation of any part of the land within the 'Macquarie Point Site Development Plan' the effect of which is conditional upon the grant of a certificate by an accredited environmental auditor pursuant to section 39F of the *Macquarie Point Development Corporation Act 2012* and may do so in anticipation of the grant of such certificate.
- 32.14.4 Where an accredited environmental auditor has granted a certificate in accordance with section 39F of the *Macquarie Point Development Corporation Act 2012* in relation to a proposed development or use, then the provisions of Schedule 8 – Environmental Management, do not apply in relation to the remediation of the land the subject of the certificate.
- 32.14.5 Subject to the above clauses, Schedule 8 – Environmental Management, applies to the use and development of land as identified in the 'Macquarie Point Site Development Plan'.

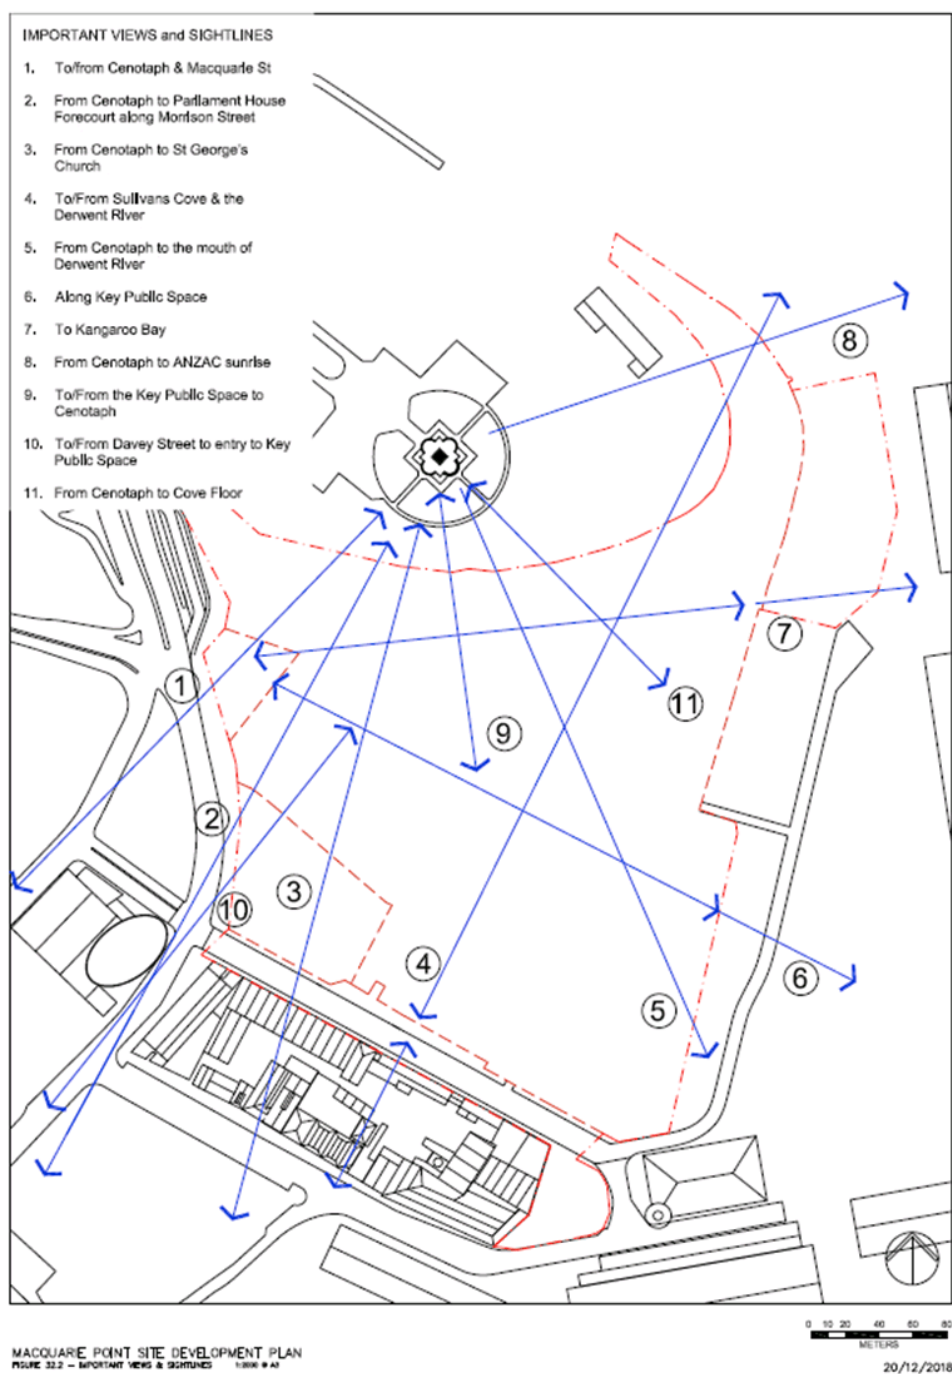

## 32.14.6 Attenuation from the Macquarie Point Wastewater Treatment Plant

| Objective:   | To ensure that sensitive uses are separated from or do not conflict with, interfere with, or constrain the Macquarie Point Wastewater Treatment plant to mitigate any adverse effects.   |
|--|--|
| Deemed to Comply (Permitted)   | Performance Criteria (Discretionary)   |
| <p>A1<br/>One of the following applies:</p> <p>(a) sensitive uses are sited no closer than 400 metres from the boundary of the land contained within the title references CT16130/1, CT15736/1, CT19468/1, CT241367/1, CT241366/1 and CT1646/1 on which the Macquarie Point Wastewater Treatment Plant is situated; or</p> <p>(b) sensitive use must not commence until the Macquarie Point Wastewater Treatment Plant has been decommissioned (including the demolition and removal of the infrastructure, sewage and sewage bi-products, liquid wastes and chemicals).</p> | <p>P1<br/>Sensitive uses must not result in potential to be unreasonably impacted by environmental harm from the Macquarie Point Wastewater Treatment Plant having regard to:</p> <p>(a) the nature of the use with the potential to cause environmental harm including:</p> <ul style="list-style-type: none"> <li>(i) operational characteristics;</li> <li>(ii) scale and intensity; and</li> <li>(iii) degree of hazard or pollution that may be emitted from the activity;</li> </ul> <p>(b) the nature of the sensitive use;</p> <p>(c) the extent of encroachment by the sensitive use to the Macquarie Point Wastewater Treatment Plant;</p> <p>(d) measures in the design, layout and construction of the development for the sensitive use to eliminate, mitigate or manage effects of emissions; and</p> <p>(e) any advice from the Director, Environment Protection Authority.</p> |

**32.15 Telecommunications Infrastructure**

The Telecommunications Infrastructure provisions of Schedule 9 of the Scheme apply.

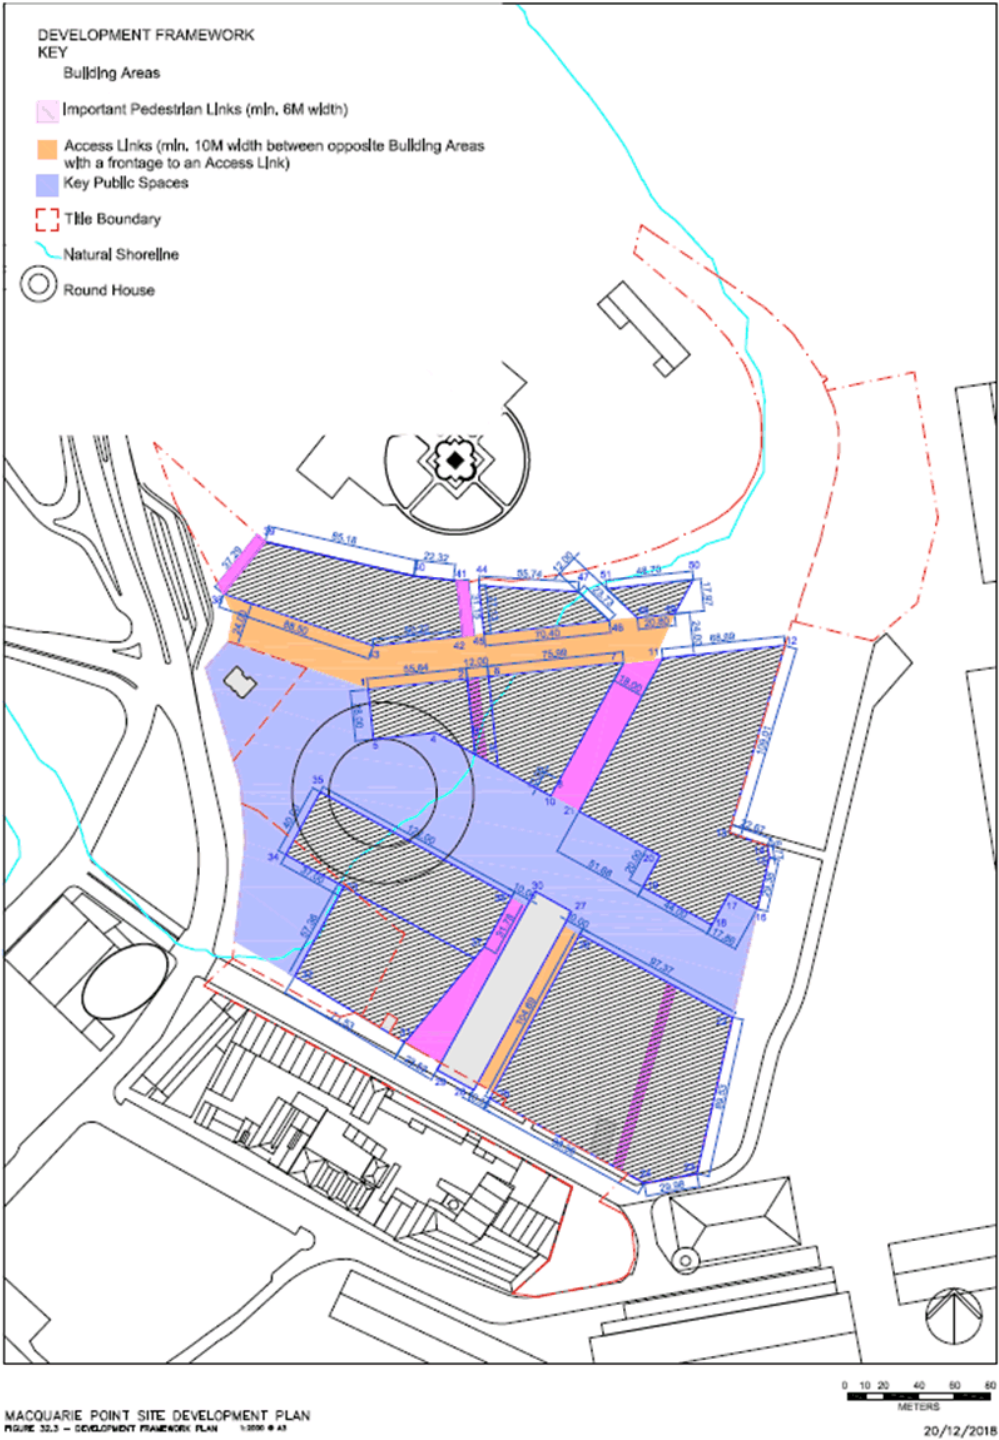

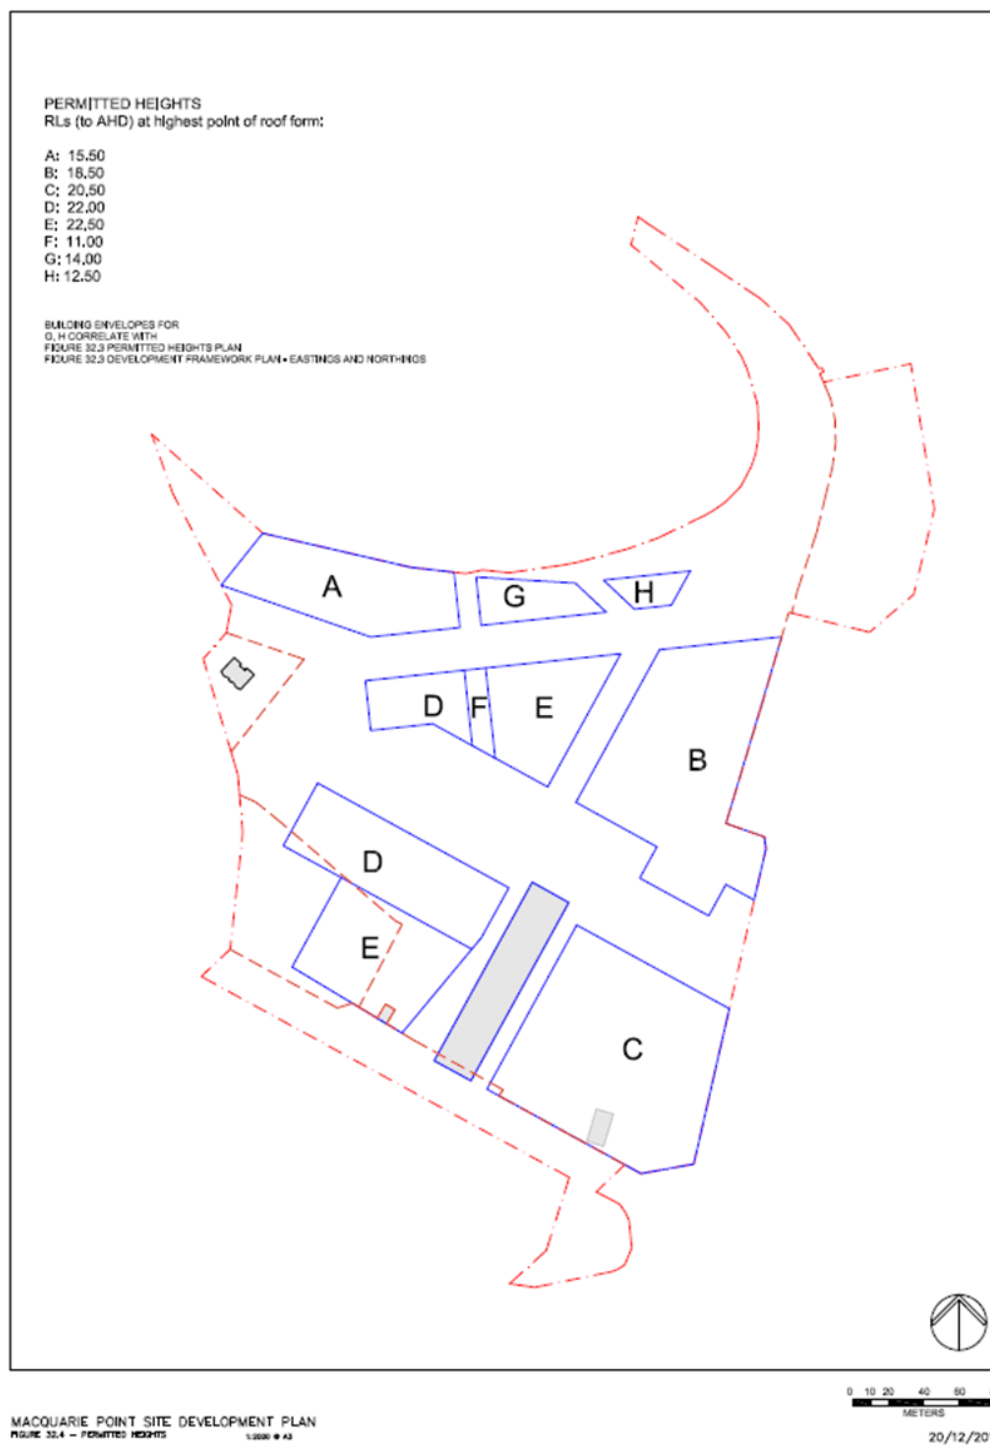

Table 32.3

EASTINGS & NORTHINGS  
TABLE

| POINT | EAST      | NORTH      | POINT | EAST      | NORTH      |
|-------|-----------|------------|-------|-----------|------------|
| 1     | 527438.41 | 5252566.16 | 47    | 527561.60 | 5252608.47 |

## 32.0 Macquarie Point Site Development Plan

### 32.1 Purpose of the Site Development Plan

32.1.1 To implement the Macquarie Point ~~Strategic Framework and~~ Reset Masterplan ~~2015~~ 2017-2030.

32.1.2 To ensure that Macquarie Point is redeveloped:

- (a) as a vibrant and active area, with a mix of uses, that connects with and complements adjacent areas within Hobart;
- (b) to encourage inner city living;
- (c) to deliver sustainable social and economic benefits to Hobart;
- (d) in accordance with sound planning, urban design and environmental principles; and
- (e) to protect the operation of the Port of Hobart for the benefit of the local, regional, state and national economy.

### 32.2 Application of the Site Development Plan

#### 32.2.1 Planning Area

This Site Development Plan applies to the area of land designated as 'Macquarie Point Site Development Plan' on Figure 4 of this Scheme.

#### 32.2.2 Control of Use and Development

Subject to the other relevant requirements of this Scheme, the Planning Authority is bound to grant a permit for applications for 'use' and 'development' designated as 'permitted' in all of the relevant provisions of this Site Development Plan, but may impose conditions.

The Planning Authority has a discretion to refuse or permit applications for 'use' and 'development' designated as 'discretionary' in any of the relevant provisions of this Site Development Plan and may impose conditions.

All other 'uses' and 'development' are 'prohibited'.

#### 32.2.3 Exempt Development

The following development is exempt from requiring a permit:

- (a) Works associated with the investigation of land contamination;
- (b) Public art;
- (c) Maintenance and repair by or on behalf of the State Government, a Council, a statutory authority, or a corporation all the shares of which are held by or on behalf of the State or by a statutory authority, of:
  - i. Electricity, gas, sewerage, stormwater and water reticulation to individual streets, lots or buildings;
  - ii. Infrastructure such as roads, rail lines, footpaths, cycle paths, drains, sewers, power lines and pipelines; and
  - iii. Minor infrastructure such as footpaths and cycle paths, playground equipment, seating and shelters, telephone booths, post boxes, bike racks, fire hydrants, drinking fountains, rubbish bins, public art, traffic control devices and markings, and the like on public land.

#### 32.2.4 Land decontamination

The undertaking of works to remediate land are permitted.

#### 32.2.5 Definitions

*Activity Centre Network* Means the Activity Centre Network in Table 1 of the *Southern-Tasmania Regional Land Use Strategy 2010 - 2035*.—

|  |  |
|--|--|
| <i>Cove Floor</i>                            | The reclaimed areas of Macquarie Point <del>shown as all areas other than</del> the <del>Escarpment</del> Parkeast of the  |
| <i>Environmental Audit</i>                   | Means a report prepared by a Suitably Qualified Person (Site Contamination) on the nature, extent and levels of existing contamination and the actual or potential risk to human health or the environment, on or off the site, resulting from that contamination, prepared in accordance with the <i>National Environment Protection (Assessment of Site Contamination) Measure 1999</i> , as amended 16  |
| <i>Environmental Harm</i>                    | Means 'environmental harm' as described in section 5 of the <i>Environmental Management and Pollution Control Act 1994</i> and includes an environmental nuisance.   |
| <i>Environmental Nuisance</i>                | Means an 'environmental nuisance' as described in section <del>3</del> of the <i>Environmental Management and Pollution Control Act 1994</i>   |
| <i>Height</i>                                | For development inside the areas shown on Figure 32.4 means the uppermost part of a building excluding minor protrusions such as aerials, antennae, solar panels, chimneys and vents measured in Australian Height Datum (AHD).<br>For development outside the areas shown on Figure 32.4, the vertical distance from existing ground level at any point to the uppermost part of a building directly above that point, excluding minor protrusions such as aerials, antennae, solar panels, chimneys and vents.                         |
| <i>Primary Space</i>                         | Key Public Spaces, <del>Escarpment Park, Water to Water Promenade and Access Links</del> shown on Figure 32.3. and   |
| <i>Secondary Space</i>                       | Smaller roads, lanes, alleys and ad hoc courts shown as Important Pedestrian Links shown on Figure 32.3.–  |
| <i>Sensitive Use</i>                         | Means a residential use or a use involving the presence of people for extended periods of time, except in the course of their employment, such as a caravan park, childcare centre, dwelling, hospital or school.  |
| <i>Site-Specific Report</i>                  | Means an environmental impact assessment carried out by a Suitably Qualified Person (Emissions), which meets the technical components of section 74 of the <i>Environmental Management and Pollution Control Act 1994</i> and includes the impact of building design, layout and construction of the development to eliminate, mitigate or manage effects of emissions to ensure that a proposed use will not be unreasonably impacted by environmental harm caused by the operations of the Macquarie Point Wastewater Treatment Plant. |
| <i>Suitably Qualified Person (Emissions)</i> | Means a person who, in the opinion of the planning authority, can demonstrate that a proposed use will not be unreasonably impacted by environmental harm caused by the operations of the Macquarie Point Wastewater Treatment Plant.  |

*Suitably Qualified Person (Site Contamination)* Means a person appointed as an accredited environmental auditor in accordance with section 39F of the *Macquarie Point Development Corporation Act 2012*.

DRAFT

**32.2.6 Interim Use and Development**

Notwithstanding the requirements of Clauses 32.3, 32.5, 32.7.1, 32.7.2, 32.7.3, 32.7.4, 32.7.5, 32.7.6, 32.7.7, 32.7.8, 32.7.10 and 32.10, the Planning Authority has discretion to approve temporary use and development for a period not exceeding 5 years providing buildings are located and designed in a manner that does not prejudice the future development of the area or appropriate pedestrian, cycle and vehicle linkages through the site to adjacent Activity Areas.

**32.3 Desired Future Character Statements**

|

| Desired Future Character Statements | Implementation Strategy |
|-------------------------------------|-------------------------|
|-------------------------------------|-------------------------|

DRAFT

|   |  |
|---|--|
| <p>Development of Activity Area 3.0 will:</p> <p><a href="#">32.3.1</a> Re-engage with its history by revealing layers of the changing nature of Macquarie Point over time through expression of the topography, natural shoreline, Round House, Goods Shed, Royal Engineers Building and Red Shed.</p> <p><a href="#">32.3.2</a> Ensure that development respects the setting and appreciation of the cultural heritage significance of the Royal Engineers Building.</p> <p><a href="#">32.3.3</a> Ensure that development does not adversely impact on the cultural heritage and reverential ambience of the Hobart Cenotaph and its surrounds.</p> <p><a href="#">32.3.4</a> <del>Include a new</del><a href="#">Acknowledge the footprint of the former railway</a> Round House <del>building</del> as shown on Figure 32.3 and the associated Table 32.3 <del>to mark the footprint of the former railway Round House and act as a landmark entry to Macquarie Point, particularly from Davey Street.</del></p> <p><a href="#">32.3.5</a> Protect the operation of the Port of Hobart for the benefit of the local, regional, state and national economy by:</p> <p><del>(a)</del>• Providing a buffer of non-sensitive uses in the buildings along the port interface to avoid constraints on the working port;</p> <p><del>(b)</del>• Ensuring that sensitive uses are separated and treated so as not to be vulnerable to noise, air, vibration and lighting impacts;</p> <p><del>(c)</del>• Incorporating appropriate design responses to avoid conflict between mixed-use, pedestrian and industrial vehicular traffic associated with the Port of Hobart along Evans Street;-</p> <p><del>(d)</del> Ensuring compliance with relevant safety and hazard</p> | <p>Use and Development Standards and clause <del>32.4</del>.</p> |

| <p>Antarctic Studies (IMAS), Runnymede Street and the open space at the eastern end of the IMAS building;</p> <ul style="list-style-type: none"> <li>• The view of the sunrise from the grounds of the Cenotaph on Anzac Day;</li> </ul> <p><del>(k)</del>• <u>To and from Sullivans Cove and the Derwent River aligning NE/SW;</u></p> <ul style="list-style-type: none"> <li>• <u>From the Royal Engineers Building to Kangaroo Bay;</u></li> </ul> <p><del>(l)</del>• <u>Along the Water-to-Water Promenade; Key Public Space; and</u></p> <ul style="list-style-type: none"> <li>• <u>32.3.9—To and from the Key Public Space and Cove Floor to the Cenotaph.</u></li> </ul> <p><u>32.3.9 To and from Davey Street and the entry to the Key Public Space.</u> Ensure that the design and appearance of roofs provide interest when viewed from the elevated areas of the Cenotaph and Domain through measures that may include incorporation of <u>rooftop gardens or articulated roof forms that</u> <del>reference the industrial saw-tooth or</del> serve a purpose such as daylighting of internal areas.</p> <p><u>32.3.10</u> Establish and reinforce a well-defined built edge to Evans Street, set back to highlight the Goods Shed as a public entry point to the site.</p> <p><u>32.3.11</u> Include a network of connections through and around the site as shown on Figure 32.3 and the associated Table 32.3, including a series of:</p> <ul style="list-style-type: none"> <li><del>(m)</del>• <u>Primary shared street spaces extending north from Evans Street and east from Tasman Highway towards the centre of the site; and</u></li> </ul> |  |
|--|--|

|  |  |
|--|--|
| <ul style="list-style-type: none"> <li>• Smaller and more intimate secondary spaces that <del>run east-west and</del> provide permeability across the site. Their position can be adjusted to suit the preferred <u>building form, siting and lot size/s.</u></li> <li>• <u>32.3.12 Include a direct pedestrian link between the Key Public Space and Cenotaph that traverses the escarpment.</u></li> </ul> |  |
|--|--|

#### 32.4 Matters to be Considered

In considering applications and any conditions to be imposed on 'use' and 'development', the Planning Authority must consider:-

- The Desired Future Character Statements in clause 32.3;
- The preferred treatment of robust, self-pigmented external materials and finishes to primary and secondary spaces;
- The suitability of proposed development to achieve satisfactory levels of safety and amenity of occupants including the avoidance of vulnerability to noise, air, vibration and lighting impacts from the Port of Hobart;-
- The potential for land use conflict between the proposed use and development and the use of Macquarie Point for major public events;
- The impact on the operation of the Port of Hobart;
- The height of buildings within Activity Area 3.0, and on adjoining and adjacent lots;
- The bulk and form of existing and proposed buildings;
- The spatial characteristics of the streets and spaces and the quality of the environment;
- Protection of water quality and water sensitive urban design principles;
- Protection of public infrastructure and the environment;
- Impacts from land decontamination works, and the need for uses not to commence until relevant areas of the site have been appropriately remediated;
- The quality of the architectural design;
- The adequacy and capacity of existing infrastructure and services including roads, footpaths, water, sewerage and power to cater for the proposed development; and
- The key drivers outlined Strategic Principles in Section 3 and principles outlined in Section 12: From Shared Vision to Masterplan in New Territory from Old Ground: Appendix A of the Macquarie Point Strategic Framework and Reset Masterplan 2015-2017-2030.-

**32.5 Use Table**

The 'Macquarie Point Site Development Plan' area is divided into three use area types as shown on Figure 32.1.

**32.5.1 Uses within Use Area 1: ~~Commercial~~ Arts and Institutional Area**

| Use Class   | Condition   |
|---|---|
| Exempt  |   |
| Occasional sporting, social and cultural events     |   |
| <u>Passive Recreation</u>                           |   |
| Permitted   |   |
| Art and Craft Centre                                |   |
| Arts and Cultural Centre                            |   |
| Car Park  | Except if on ground floor level and within 8 metres of the front of a building that faces a primary or secondary space. |
| Community Centre                                    |   |
| Eating Establishment                                |   |
| Education Centre                                    | Except for secondary or primary school  |
| <u>Exhibition Centre</u>                            |   |
| Function Centre                                     |   |
| Market  |   |
| <u>Minor Sport and Recreation</u>                   |   |
| Office  |   |
| Public Display Office                               |   |
| Public Transport Facility                           |   |
| Research and Development Centre                     |   |
| Shop  |   |
| Utility Installation                                |   |
| Discretionary                                       |   |
| <del>Gambling Premises</del> <u>Commercial Port</u> |   |
| <del>Hospital Services</del>                        |   |
| Hotel   | Except for accommodation  |
| <u>Light Industry</u>                               |   |
| <u>Major Sport and Recreation</u>                   |   |

|   |  |
|---|--|
| Manufacturing Sales                                 |  |
| Place of Worship                                    |  |
| <u>Passive Recreation</u>                           |  |
| Railway Terminal-                                   |  |
| <u>Recreational Boating Facility</u> <u>Service</u> |  |
| Transport Terminal                                  |  |
| Warehouse   |  |
| <b>Prohibited</b>                                   |  |
| All other uses                                      |  |

**32.5.2 Uses within Use Area 2: Mixed Use Area**

| Use Class                                       | Condition   |
|---|---|
| Exempt  |   |
| Occasional sporting, social and cultural events |   |
| <u>Passive Recreation</u>                       |   |
| Permitted                                       |   |
| Art and Craft Centre                            |   |
| Arts and Cultural Centre                        |   |
| Car Park  | Except if <u>not adjacent to the escarpment and</u> on ground floor level and within 8 metres of the front of a building that faces a primary or secondary space- |
| <u>Child Care Centre</u>                        |   |
| Community Centre                                |   |
| Eating Establishment                            |   |
| Education Centre-                               |   |
| <u>Exhibition Centre</u>                        |   |
| Function Centre                                 |   |
| Hospital Services                               |   |
| Hotel   | Only if above ground floor level where fronting Evans Street.-  |
| Market  |   |
| <u>Manufacturing Sales</u>                      | <u>Only if in the Goods Shed</u>  |
| <u>Minor Sports and Recreation</u>              |   |

|  |  |
|--|--|
| Office   |  |
| <del>Passive Recreation</del>                          |  |
| Place of Worship                                       |  |
| Public Display Office                                  |  |

| All other uses   |  |

## 32.5.3 Uses within Use Area 3: Open Space Area

| Use Class                                       | Condition |
|---|-----------|
| <b>Exempt</b>                                   |           |
| <del>Passive Recreation</del>                   |           |
| Occasional sporting, social and cultural events |           |
| <del>Passive Recreation</del>                   |           |
| <b>Permitted</b>                                |           |

|  |   |
|--|---|
| Car Park                               | Only in the <u>Escarpment Park</u> , Art School car park (47 Hunter Street) or associated with the use of the Royal Engineers Building. |
| Community Centre                       |   |
| Market                                 |   |
| Office                                 | Only in the Royal Engineers Building.   |
| Public Transport Facility              |   |
| <b>Discretionary</b>                   |   |
| Art and Craft Centre                   |   |
| Arts and Cultural Centre-              |   |
| <u>Car Park</u>                        | <u>Only if underground</u>  |
| Child Care Centre                      |   |
| Eating Establishment                   |   |
| Minor Sports and Recreation            |   |
| Railway Terminal                       | <u>Only in the Escarpment Park.</u>   |
| Recreational Boating Facility          |   |
| <u>Research and Development Centre</u> | <u>Only if directly associated with a use in the Arts and Institutional Area.</u>   |
| Shop                                   |   |
| Transport Terminal                     |   |
| Utility Installation                   |   |
| <b>Prohibited</b>                      |   |
| All other uses                         |   |

**32.6 Use Standards****32.6.1 Mixed Use**

| Objective: | To ensure that Activity Area 3.0 is developed with a mix of uses.-  |   |
|------------|---|---|
|            | Deemed to Comply (Permitted)  | Performance Criteria (Discretionary)  |
| A1         | <p>The total combined floor area of the following uses does not exceed:-</p> <p>(a) —Shop: 10,000-<math>m^2</math></p> <p>(b) Research and Development Centre and Education Centre: <del>15,000-</del><math>m^2</math></p> <p>(c) Office: <del>60,300-</del><math>m^2</math></p> <p>(d) Residential Accommodation: <del>50,000-</del><math>m^2</math> <u>15,000</u><math>m^2</math></p> <p>(e) Hotel and Visitor Accommodation: 20,000-<math>m^2</math></p> | <p>P1</p> <p>Uses must contribute to the interest and activity of Macquarie Point as a mixed use area having regard to the following:</p> <p>(a) Provide for a diversity of uses at densities responsive to the character of streetscapes and public spaces;</p> <p>(b) Encourage use at street level that generates activity and pedestrian movement through the area;</p> <p>(c) Ensure that shop and office uses are consistent with the Activity Centre Network and do not have an unacceptable impact on the Hobart CBD.</p> |

**32.6.2 Residential and Visitor Accommodation Uses ~~Fronting Evans Street~~**

| Objective:- | <p>(a) Ensure appropriate levels of safety and amenity for residential and visitor accommodation <del>developments directly fronting Evans Street; and;</del></p> <p>(b) Protect the operation of the Port of Hobart for the benefit of the local, regional, state and national economy; <del>and</del></p> <p><del>(b)(c)</del> <u>Protect the viability of Macquarie Point as a major public event space</u></p>   |   |
|-------------|--|---|
|             | Deemed to Comply (Permitted)   | Performance Criteria (Discretionary)  |
| A1          | <p>Residential or Visitor Accommodation development <del>within 50 metres of Evans Street</del> must demonstrate that design elements are able to achieve internal noise levels in accordance with relevant Australian Standards for acoustics control (including AS3671:1989 – <i>Road Traffic Noise Intrusion (Building Siting and Construction)</i> and AS2107:2000 – <i>Acoustics (Recommended Design Sound Levels and Reverberation Times for Building Interiors)</i>).</p> | <p>P1</p> <p>Residential or Visitor Accommodation development is adequately protected from <u>environmental harm from noise from transport/ movements, the operational port noise to safeguard occupants'—</u> <del>health and amenity</del> <u>likely noise from major public events at Macquarie Point.</u></p> |

**32.6.3 Car Parking**

|  |  |  |
|--|--|--|
| Objective:   | To ensure that traffic movements associated with car parking use can be accommodated safely within the surrounding road network. |  |
| <b>Deemed to Comply (Permitted)</b>  |  | <b>Performance Criteria (Discretionary)</b>  |
| <b>A1</b><br>The total number of car parking spaces in Activity Area 3.0, excluding Area A shown on Figure 32.4, must not exceed 350 spaces. |  | <b>P1-</b><br>Traffic impacts associated with car parking must be safe and minimise any adverse impact on the efficiency of the road, having regard to: <ul style="list-style-type: none"> <li>(a) The increase in traffic caused by the car parking;</li> <li>(b) The nature of the traffic generated by the car parking;</li> <li>(c) The surrounding road conditions;</li> <li>(d) The need for the use;</li> <li>(e) Any traffic impact assessment; and</li> <li>(f) Any proposed engineering works or traffic management arrangements.</li> </ul> |

### 32.7 Development Standards for Buildings or Works

#### 32.7.1 Impacts from the Working Port

|                                     |  |   |
|-------------------------------------|--|---|
| Objective:-                         | (a) Ensure appropriate levels of safety and amenity for occupants of buildings; and<br>(b) Protect the operation of the Port of Hobart for the benefit of the local, regional, state and national economy. |   |
| <b>Deemed to Comply (Permitted)</b> |  | <b>Performance Criteria (Discretionary)</b> |

|  |   |
|--|---|
| <p><b>A1</b></p> <p>Buildings:</p> <p>(a) Within 50 metres of the boundary adjoining the Port of Hobart must include design elements that are able to achieve internal noise levels in accordance with the relevant Australian Standards for acoustics control (including AS3671:1989 – <i>Road Traffic Noise Intrusion (Building Siting and Construction)</i>, and AS2107:2000 – <i>Acoustics (Recommended Design Sound Levels and Reverberation Times for Building Interiors)</i>);</p> <p>(b) Within 20 metres of the boundary adjoining the Port of Hobart must not have private outdoor areas, decks or balconies; and</p> <p>(c) Within 10 metres of the boundary adjoining the Port of Hobart must only have fixed windows (non-opening).</p> | <p><b>P1</b></p> <p>Buildings are adequately protected from noise arising from port activities including the movement of heavy vehicles to safeguard occupants' health and amenity.</p> |
|--|---|

### 32.7.2 Building Form

|  |   |                                     |   |
|--|---|-------------------------------------|---|
| Objective:   | <p>Ensure the height and form of buildings are:</p> <p>(a) Consistent with established building forms within Sullivans Cove;-</p> <p>(b) Sympathetic to the natural topography of Sullivans Cove, including the amphitheatre sloping down to the Cove with the headland and escarpment surrounding the Cenotaph forming a natural expression of the Cove Wall;</p> <p>(c) Respectful of the low-lying nature of the site and its visibility from surrounding elevated areas.—</p> |                                     |   |
| <table style="width: 100%; border: none;"> <tr> <td style="width: 50%; text-align: center; border: none;"><b>Deemed to Comply (Permitted)</b></td> <td style="width: 50%; text-align: center; border: none;"><b>Performance Criteria (Discretionary)</b></td> </tr> </table> |   | <b>Deemed to Comply (Permitted)</b> | <b>Performance Criteria (Discretionary)</b> |
| <b>Deemed to Comply (Permitted)</b>  | <b>Performance Criteria (Discretionary)</b>   |                                     |   |

|   |  |
|---|--|
| <p>A1-</p> <p>Building height must be no more than:-</p> <p>(a) The permitted heights for areas shown in Figure 32.4 <u>and associated Table 32.3</u>; or</p> <p>(b) 6 metres if outside the areas shown on Figure 32.4; <u>and associated Table 32.3</u></p> | <p>P1</p> <p>Building height is consistent with the streetscape, urban form and character of the surrounding area, having regard to:</p> <p>(a) The Desired Future Character Statements in clause 32.3;</p> <p>(b) The protection of important views shown in Figure 32.2;</p> <p>(c) The apparent height when viewed from the Cenotaph and the southern side of the Cove;</p> <p>(d) The overshadowing of existing and proposed buildings and of the Key Public Spaces as shown in Figure 32.3 and the associated Table 32.3;</p> <p>(e) The individual prominence of the building and its contrast with neighbouring buildings;</p> <p>(f) The architectural and design merit of the building itself;</p> <p>(g) The contribution the building will make to Macquarie Point and the City of Hobart more generally in terms of architectural character and quality;</p> <p>(h) The extent and nature of the contribution that the building and its use will make to the economic activity of Macquarie Point and in the City of Hobart;</p> <p>(i) The extent and nature of the contribution that the building and its use will make to the reputation of the City of Hobart as an international destination; and</p> <p><u>(j) The civic amenity of the building.</u></p> <p><u>Buildings sited adjacent to the headland are not to protrude above the escarpment when viewed from the Cenotaph.</u></p> <p style="text-align: right;">(j)</p> |

| <b>A1</b><br><br><u>Buildings adjacent to the escarpment are sited in Area A shown on Figure 32.4.</u> | <b>P1</b><br><br><u>Buildings must be sited and aligned having regard to the Desired Future Character Statements in clause 32.3.</u>   |

**32.7.6 Design**

| Objective: To ensure that building façades promote and maintain high levels of pedestrian interest, amenity and safety.  |  |
|--|--|
| Deemed to Comply (Permitted)   | Performance Criteria (Discretionary)   |
| <p>A1</p> <p>Buildings must comply with the following:</p> <p>(a) Provide the main pedestrian access to the building so that it is visible from the road or publicly accessible areas of the site;-</p> <p>(b) Ground floor façades facing a primary or secondary space must comprise a surface area of no less than 40 per cent consisting of windows or doorways; and</p> <p>(c) Ground floor facades facing a primary or secondary space must not comprise a single length of blank wall greater than 30 per cent of the total façade on that frontage.</p> | <p>P1</p> <p>Buildings must be designed to enhance the streetscape by:</p> <p>(a) Providing a pedestrian access to the building that addresses the street or other public place;-</p> <p>(b) Providing <del>windows in the front</del> <u>façade in a way that enhances the streetscape and provides for</u> passive surveillance of public spaces; and</p> <p>(c) Treating large expanses of blank wall in the front façade and façades facing other public space boundaries with architectural detail or public art <del>so as to contribute positively to the</del></p> |
| <p>A2</p> <p>Mechanical plant and other service infrastructure, such as heat pumps, air conditioning units, switchboards, hot water units and the like, must not be visible from the street and other public places.</p>   | <p>P2</p> <p>Mechanical plant and other service infrastructure, such as heat pumps, air conditioning units, switchboards, hot water units and the like, when viewed from the street or other public places, must not detract from:</p> <p>(a) The visual qualities of the streetscape; and-</p> <p>(b) The amenity of pedestrians through noise, air movement, dust or similar.-</p>   |
| <p>A3</p> <p>Security shutters or grilles must not be fitted over windows or doors on façades facing a primary or secondary space or other public place.</p>   | <p>P3</p> <p>Security shutters or grilles over windows or doors on a façade facing the frontage or other public spaces are only provided if it is essential for the security of the premises and no other alternatives are feasible.</p>   |

**32.7.7 Roof Mounted Mechanical Plant**

|             |  |
|-------------|--|
| Objective:- | Rooftop mechanical plant is to be unobtrusive when viewed from elevated areas including the Cenotaph and surrounding areas.- |
|-------------|--|

| Deemed to Comply (Permitted)   | Performance Criteria (Discretionary)  |
|--|---|
| <p>A1</p> <p>Buildings are to achieve one or more of the following:</p> <p>(a) Roof-top mechanical plant and service infrastructure, including lift structures, must be contained within the roof;-</p> <p>(b) Roof-top mechanical plant is to be screened from public view including from the Cenotaph and surrounding areas.</p> | <p>P1</p> <p>Rooftop mechanical plant is to be sited and treated so as to be unobtrusive when viewed from the Cenotaph and surrounding areas.</p> |

**32.7.8 Outdoor Storage Areas**

| Objective:-  | To ensure outdoor storage areas do not visually detract from the area.  |  |
|--|---|--|
| Deemed to Comply (Permitted)   | Performance Criteria (Discretionary)  |  |
| <p>A1</p> <p>Outdoor storage areas must:</p> <p>(a) Be located behind the façade of the building; and</p> <p>(b) All goods and materials stored must be screened from public view.</p> | <p>P1-</p> <p>Outdoor storage areas must be located, treated or screened to minimise adverse impacts on the visual amenity of the area.</p> |  |

**32.7.9 Inundation Hazard**

| Objective:- | To ensure the risk from coastal inundation is appropriately managed.   |                                      |
|-------------|--|--------------------------------------|
|             | Deemed to Comply (Permitted)   | Performance Criteria (Discretionary) |
| A1          | The finished floor level of a habitable room must be not less than 2.8 metres above the Australian Height Datum (AHD). | P1<br>No performance criteria.       |

**32.7.10 Pedestrian Links**

| Objective: | -To provide a network of pedestrian connections.   |  |
|------------|--|--|
|            | Deemed to Comply (Permitted)   | Performance Criteria (Discretionary)   |
| A1         | A minimum 6 metres wide publicly accessible <del>east-west</del> pedestrian lane or arcade is provided within 10 metres of a pedestrian link shown on Figure 32.3 and the associated Table 32.3. | P1<br>Buildings must compliment a network of pedestrian connections having regard to:<br>(a) The Desired Future Character Statements in clause 32.3; and<br>(b) The <del>key drivers-</del> <del>outlined</del> Strategic Principles in Section 3 and principles- <del>outlined in Section 12:- From Shared Vision to Masterplan</del> |

**32.8 Development Standards for Subdivision****32.8.1 Subdivision**

| Objective: | To ensure that subdivision of land is consistent with achieving the desired layout of buildings and spaces and occurs in a coordinated manner with its use and development. |                                      |

**32.9 Heritage**

The heritage provisions of Schedule 1 of the Scheme apply.

**32.10 Public Urban Space**

32.10.1 Prior to development within the Primary Spaces or Secondary Spaces, a planning permit is required for a civic works concept plan. The plan is to show the extent of intended civic works, including provision of essential services infrastructure, public amenities, paving, planting, location of all fixed street furniture, including trees and ground covers, artworks, free standing signs, lights and lighting concept. It is to be prepared having regard to the

Desired Future Character Statements in clause 32.3 and Matters to be Considered in clause 32.4.

32.10.2 A permit is not required for development in accordance with an approved civic works concept plan.

**32.11 Signage**

The Signage provisions of Schedule 4 of the Scheme apply.

**32.12 Traffic, Access and Parking**

The Traffic, Access and Parking provisions of clause 32.6.3 and Schedule 5 of the Scheme apply. The provisions of clause 32.6.3 prevail over Schedule 5 of the Scheme to the extent of any inconsistency.

**32.13 Demolition**

The Demolition provisions of Schedule 7 of the Scheme apply.

**32.14 Environmental Management**

32.14.1 If an accredited environmental auditor has provided a certification in accordance with section 39F(1) of the *Macquarie Point Development Corporation Act 2012*, then the land contamination objectives of Schedule 8 – Environmental Management, do not apply to any use or development which is the redevelopment referred to in such certificate.

32.14.2 In determining the grant of a permit for any application for use and development within the 'Macquarie Point Site Development Plan', the planning authority must not impose any condition or restriction in a planning permit which is inconsistent with, or imposes any additional requirements to, a certificate from an accredited environmental auditor given pursuant to section 39F of the *Macquarie Point Development Corporation Act 2012*.—

32.14.3 The planning authority may grant a planning permit for remediation of any part of the land within the 'Macquarie Point Site Development Plan' the effect of which is conditional upon the grant of a certificate by an accredited environmental auditor pursuant to section 39F of the *Macquarie Point Development Corporation Act 2012* and may do so in anticipation of the grant of such certificate.—

32.14.4 Where an accredited environmental auditor has granted a certificate in accordance with section 39F of the *Macquarie Point Development Corporation Act 2012* in relation to a proposed development or use, then the provisions of Schedule 8 – Environmental Management, do not apply in relation to the remediation of the land the subject of the certificate.—

32.14.5 Subject to the above clauses, Schedule 8 – Environmental Management, applies to the use and development of land as identified in the 'Macquarie Point Site Development Plan'.

32.14.6 Attenuation from the Macquarie Point Wastewater Treatment Plant

|  |   |  |
|--|---|--|
| Objective:   | To ensure that <u>sensitive</u> uses are separated from or do not conflict with, interfere with, or constrain the Macquarie Point Wastewater Treatment plant to mitigate any adverse effects. |  |

Conclusion .....45

## Executive Summary

In December 2016, Mona put forward its vision for the Macquarie Point site focusing on the development of an arts and cultural precinct and a nationally significant Truth and Reconciliation Art Park.

In recognising that Macquarie Point presents a once in a generation opportunity for Hobart and Tasmania, the Tasmanian Government directed the Corporation to reset the vision for the Macquarie Point site and prepare a new plan for development based on the MONA vision.

*"The new vision addresses the feedback we have received and offers a roadmap for realising Macquarie Point's potential as a truly iconic national landmark." Premier Hon. Will Hodgman MP.*

The Corporation has developed the Reset Masterplan 2017 – 2030 (reset masterplan) based on the Mona vision. The reset masterplan represents the urban design rationale which ground-truths the Mona vision and aligns with the strategic policies of the Planning Scheme.

The reset masterplan focuses solely on the first stage of the Mona vision and is confined to the bounds of the Macquarie Point site as recognised under the existing Planning Scheme.

The proposed Planning Scheme amendments are required to implement the reconfigured layout and uses of the reset masterplan. They comprise a series of updates to the figures and provisions of the Macquarie Point Site Development Plan under Clause 32 of Part F, as well as some minor consequential changes to the references in the parking policy objectives for Activity Area 3 under Schedule 5 of the Planning Scheme.

This assessment has been prepared to support a request by the Board of the Macquarie Point Development Corporation (the Board) to the Minister pursuant to ss 39G(1) of the *Macquarie Point Development Corporation Act 2012* (MPDC Act) for amendments to the Planning Scheme.

It includes a full description of the proposed amendments and the following relevant information to support the request as required under ss39(4) of the Act:

- A statement of the consultation undertaken in relation to the draft of the proposed amendments;
- Demonstration that the proposal furthers the requirements of the objectives set out in Schedule 1 to the *Land Use Planning and Approvals Act 1993* (LUPAA);
- Demonstration that the proposal is consistent with applicable State Policies within the meaning of the *State Policies and Projects Act 1993*;
- Demonstration that the proposal is as far as practicable consistent with the Southern Tasmania Regional Land Use Strategy;
- Confirmation that the proposal is consistent with the Sullivans Cove Strategic Framework under Part B of the Planning Scheme; and
- Confirmation that the proposal does not alter any heritage listings under Schedule 1 of the Planning Scheme.

## 1. Introduction

This report has been prepared by All Urban Planning Pty Ltd to support a request by the Board to the Minister pursuant to ss 39G(1) of the *Macquarie Point Development Corporation Act 2012* (MPDC Act) for amendments to the Sullivans Cove Planning Scheme 1997 (Planning Scheme). The amendments reflect the reset masterplan that flows from the Mona Vision for the site.

The Minister may approve the amendments under Section 39I of the MPDC Act providing he is satisfied that the proposal:

- furthers the requirements of the objectives set out in Schedule 1 to the *Land Use Planning and Approvals Act 1993* (LUPAA);
- is consistent with applicable State Policies within the meaning of the *State Policies and Projects Act 1993*;
- is as far as practicable consistent with the Southern Tasmania Regional Land Use Strategy;
- is consistent with the Sullivans Cove Strategic Framework under Part B of the Planning Scheme; and
- providing the amendments do not alter any heritage listings under Schedule 1 – Conservation of Cultural Values of the Planning Scheme.

The amendment is supported by the following accompanying documents:

- Reset Masterplan 2017 – 2030, MPDC;
- Macquarie Point Masterplan: Reset, Urban Design Notes, Leigh Woolley, 31 May 2017 and addendum;
- Macquarie Point Wastewater Treatment Plant Odour Assessment, Environmental Dynamics, 5 November 2017;
- Assessment of Market Impacts, AEC Group, 30 May 2017;

### 1.1 Background

The Corporation was established through the MPDC Act and was tasked with the responsibility to manage the remediation and facilitate the redevelopment of the Macquarie Point site.

The Corporation prepared the former masterplan and lodged an accompanying set of amendments to the Planning Scheme in 2015.

A planning scheme amendment, in the form of a Site Development Plan (SDP), was endorsed by Council in December 2015 and approved by the Tasmanian Planning Commission (TPC) in November 2016. Those amendments (2/2015) provided a significant change in strategic direction for the site from an industrial use area to a mixed-use area comprising commercial, institutional, recreational, tourist oriented, entertainment and residential uses.

In December 2016, Mona put forward its vision for the Macquarie Point site focusing on the development of an arts and cultural precinct and a nationally significant Truth and Reconciliation Art Park.

## AllUrbanPlanning

In response to public feedback and recognising that Macquarie Point presents a once in a generation opportunity for Hobart and Tasmania, the Tasmanian Government directed the Corporation to reset the vision for the Macquarie Point site and prepare a new plan for development based on the Mona vision. The reset masterplan focuses solely on the first stage of the Mona vision and is confined to the bounds of the existing SDP.

The area is to be developed to include public space, exhibition space, commercial space, cultural space, conference facilities, accommodation, facilities to support Hobart's role as Australia's Antarctic gateway and tourism infrastructure.

Significant work has been done during 2017-18 investigating odour emissions and potential for environmental harm from the Macquarie Point Wastewater Treatment Plant (WWTP). The findings are outlined in the accompanying odour and noise monitoring and modelling study prepared by Dr Steve Carter from Environmental Dynamics.

On the 18 September 2018, TasWater and the Government announced that the WWTP would be decommissioned and removed within 4 years. Dr Carter's report supports the discretionary use status for consideration of sensitive uses over the intervening period.

### 1.2 Site Context

Macquarie Point is located between the CBD, the headland and Sullivans Cove. Measuring approximately 9.3 hectares, the site lies predominantly on the reclaimed cove floor adjacent to the working port, along the Derwent River at the eastern edge of the city.

Today the site has a number of interim uses along with a small office building, micro brewery and sheds used for a variety of events. The site has also been used for other community events including Dark Mofo since 2015 and a range of public events and performances in the Goods Shed.

The site's surrounding land is primarily used for public access and cultural significance, commercial and professional services, retailing, port facilities, light industry, marine industry, fishing industry and educational purposes. Significant landmarks within the general area of Macquarie Point include the Port of Hobart, Cenotaph, Sullivans Cove and the University of Tasmania Centre for the Arts.

The existing site conditions are detailed extensively in the accompanying assessments.

### 1.3 Title Information & Owners Consent

The proposal relates to the following land shown in Figure 1 below:

| Address                                  | Title      | Owner                               |
|--|------------|-------------------------------------|

AllUrbanPlanning

*Figure 2 The Site*

#### 1.4 The Proposal

It is proposed to amend the Planning Scheme to give effect to the reset master plan. This involves amendments to the Macquarie Point Site Development Plan to replace the spatial figures and adjust the use and development considerations.

The proposed amendments are explained in Section 5.3 below and provided in full in Appendix A.

#### 1.5 Macquarie Point Development Corporation

The Corporation was established via the MPDC Act and was tasked with the responsibility to manage the remediation and facilitate the redevelopment of the Macquarie Point site.

The reset masterplan follows a direction from the Minister to the Board of the Corporation under Section 36(2) of the MPDC Act to amend the Macquarie Point Strategic Framework and Masterplan 2015-2030 (former masterplan). The reset masterplan is an amended site redevelopment plan under Section 37(6) and took effect when approved by the Minister under Section 37(7) of the MPDC Act.

The proposed Planning Scheme amendments are to ensure that statutory consideration of use and development of Macquarie Point is assessed in accordance with the principles and layout of the reset masterplan.

### 1.6 Community Consultation

The Corporation has engaged with close to 20 consultative groups including over 300 stakeholders at each stage of the reset to provide opportunities for input. The Corporation has consulted with the Aboriginal community over the last 18 months on the concept of the reset vision, with particular focus on one of the key public spaces, named under the Mona Vision, the Truth and Reconciliation Art Park. The Corporation sees the park concept being guided by the Aboriginal community and the wider community on the purpose, design and final name through inclusive, respectful and equitable consultation.

A series of further stakeholder briefings will be held across key business, tourism, arts and culture, political and Antarctic groups. The purpose of these briefings is to inform the stakeholders about the new vision for Macquarie Point and update them on the progress to date.

## 2. Reset Masterplan

### 2.1 Opportunity

Macquarie Point aims to inspire a new era of cooperation and optimism in this exciting arts, culture, science and tourism urban renewal development.

The reset masterplan focuses solely on the first stage of the Mona Vision and is confined to the bounds of Activity Area 3 of the Planning Scheme.

### 2.2 Reset Masterplan Rationale

The reset masterplan represents the urban design rationale which ground-truths the Mona Vision and aligns with the strategic policies of the Planning Scheme.

It outlines the key concepts and proposed uses as well as, importantly, allowing for a built form which respects, recognises and acknowledges the landscape in which it sits.

The key public spaces will form the centerpieces of Macquarie Point. It will be an expression of the people of Tasmania and embody the values and ideals of our community.

The reset masterplan envisages a connected and active place at ground level and the mixed-use nature of the site is demonstrated by the flexibility offered in the use area plan.

Figure 3 - Proposed master plan use areas

Arts and institutional uses are proposed adjacent to the boundary shared with the Hobart port reflecting the need to provide a buffer zone of non-sensitive uses.

The siting of these uses also makes provision for the possible requirement for some direct access into the port area to support both the Antarctic and science precinct and TasPorts' intention to increase Antarctic and tourism activity on the Hobart Port.

The remainder of the site presents opportunities for mixed-use development.

## AllUrbanPlanning

Unlike the former masterplan, the reset masterplan does not designate building lots, rather it offers larger parcels with the flexibility to respond to the nature and scale of the specific development and market demand providing the strategic principles which underpin the Planning Scheme are furthered.

The buildings adjacent to the key public spaces have the potential to become significant architectural statements and mark the entry to the site.

The design, bulk and placement of these buildings are especially important, as this area will define the view along Davey Street into the site and to the Cenotaph.

As with the former masterplan, car parking will be kept to the periphery of the site as much as possible to emphasise the prioritisation of pedestrians under the site's mobility network.

The ultimate arrangement of uses over the life of the development will be informed by the Corporation's land release strategy and discussions with potential developers.

### ***Strategic Principles of the reset masterplan***

The former masterplan identified eight underpinning key drivers which provided a structure upon which the narrative for the site was built.

The reset masterplan acknowledges, recognises and realigns the urban design values and spatial rationales of the former masterplan in the context of the strategic policies of the Planning Scheme:

#### **1. Continuous shared history**

The Cove shall display its history: Macquarie Point will be an expression of the people of Tasmania embodying the values and ideals of our community. The Hobart area was home to the Muwinina band of the South East Tribe of Aborigines and evidence of their activity has been found in the site's surrounds.

Macquarie Point has a long history of use associated with early European settlement, including defence, sanitation, industry, including the Hobart gasworks and transport. Until recently, the site was predominantly used as a railyards and for freight handling. The site has a proud history as a working port which still operates today.

#### **2. Reconnecting Cove to River**

Creation of better physical and visual links to the water from the city: While the aspiration is to eventually be able to walk or cycle the full length of the Intercity Cycleway from as far away as Mona or Taroona, the pathway is currently broken by the site itself.

There is now an opportunity to complete this network, opening the site to the community for the first time since 1850, while providing a connection between Sullivans Cove and the Regatta Grounds.

#### **3. A cultural asset**

Sullivans Cove is a cultural, artistic and festive focus for the city: the reset masterplan aspires to transform the industrial site of Macquarie Point into an internationally significant cultural precinct, which builds on its location to establish a critical mass of art and cultural activity which is integrated with existing cultural assets within a wider cultural precinct.

#### **4. Diversity of uses**

The Cove offers a diverse range of activities for residents and tourists alike: The reset masterplan will be mixed-use in nature and sufficiently flexible to accommodate fluctuations in future market demand. To attract locals and visitors year-round, the site must offer ongoing diverse activity which spans culture, recreation and tourism while complementing commercial uses such as bars, cafes and

## AllUrbanPlanning

restaurants. Pop-up and temporary uses will activate the site prior to and during the development phase.

### 5. A landscape for people

The Cove retains the pedestrian scale that existed during the early settlement of Hobart: Macquarie Point is a low-lying site, located in a city which is understood from elevated views. In particular, the views to and from the site from the headland, places Macquarie Point in the context of its surrounding landscape, while importantly, ensuring it remains a place for Tasmanians.

### 6. Spaces which connect

The Cove is one of the world's finest city landscape settings: The reset masterplan presents an opportunity to unlock an open space network and become a central connector between the city and the Queens Domain. The masterplan is intended to open large areas of the site to the public and provide connecting pathways from Evans Street to the Cenotaph.

The key public spaces will form the centrepiece of Macquarie Point and the entrance to the site and offers a glimpse of the headland and beyond.

### 7. Mobility policy

Enhance the pedestrian experience in the Cove: Macquarie Point will have strong pedestrian and cycling links within the site itself to reconnect the site with its surrounds. The street network will minimise vehicular access to the heart of the site. To ensure future transport networks can be incorporated within the site, corridors for the movement of light rail and heavy vehicles will be reserved where they traverse the site.

The proposed Planning Scheme amendments provide flexibility for consideration of a range of uses and design solutions, providing the principles of the reset masterplan and the Planning Scheme are met.

## 3. Existing Planning Controls

### 3.1 Planning Scheme context

The site incorporates the Former Railyards and Boral concrete batching plant 'Key Sites' under Part F of the Planning Scheme. The Key Site status means that the Planning Authority has identified the site as having the potential to be used or developed to achieve a range of strategic planning objectives.

The site is contained within Activity Area 3.0 which also matches the extent of the Macquarie Point Site Development Plan as shown on Figure 4 of the Planning Scheme (see Figure 4 below). The provisions for the SDP are set out under Section 32 of the Planning Scheme and are intended to facilitate the identified preferred future through promotion of appropriate use and development on strategically important and presently under-utilised sites within the Cove.

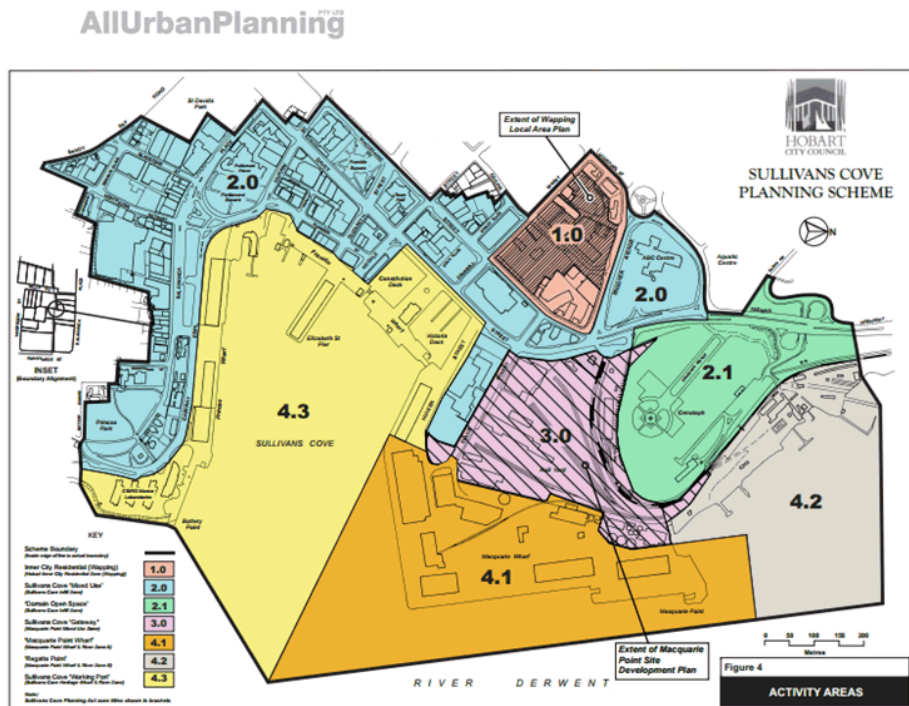

Figure 4 – Activity Areas (Figure 4) Sullivans Cove Planning Scheme

### 3.2 Site Development Plan - Performance

Under Clause 31.4 the proposed amendments to the SDP are to reflect:

- the provisions of the Strategic Framework (Part B);
- the Objectives and Performance Criteria of the relevant Activity Area (Part D); and
- the Objectives and provisions of the Schedules (Part E) of the Scheme.

Clause 31.5 also requires that the following matters are considered in a SDP affecting the Boral Site:

- the visual contribution to any new access road servicing Activity Area 3 and with the potential to also service Activity Area 4.1 (though application for the road itself is not 'discretionary' under the Scheme and does not require the preparation of a Site Development Plan).
- the visual contribution to the Tasman Highway 'gateway' into the Cove.
- the complementary relationship to the Royal Engineers Building, i.e. any development should be less visually prominent than the Royal Engineers Building grounds or as part of the setting of the Royal Engineers Building.
- the view down Macquarie Street to the Cenotaph.

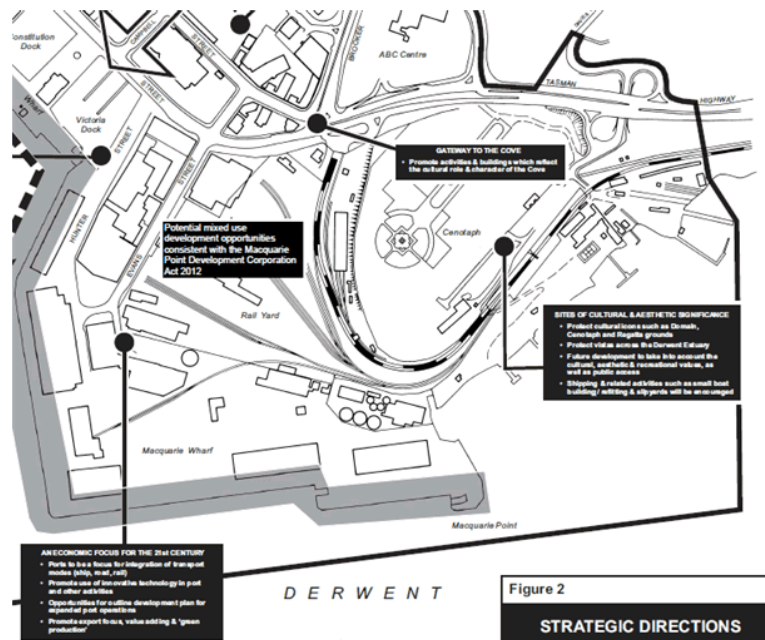

### 3.3 Strategic Framework (Part B)

The relevant considerations of the Strategic Framework include Section 5 - Values and Strengths of the Cove, Section 6 - Preferred Future for the Cove and Section 7 - Planning Principles for Management of Activities in the Cove

The Guiding Principles of the Strategic Framework are:

- *Sullivans Cove shall continue as a dynamic and evolving working port, also as a fishing and yachting harbour, cultural centre, recreation and entertainment district, centre of government and a place for commerce and living.*
- *it shall continue to cater for public activities in streets and in buildings at street level.*
- *it shall display its history, and have a life beyond 'nine-to-five' hours.*
- *the activities in the Cove should positively contribute to the character of the Cove and not detract from the operations of a working port. Activities and associated development should not adversely impact on pedestrian and other forms of movement through the Cove, access to the water edge, views, and the human scale environment.*
- *the water environment of the Cove shall continue to fulfil a significant role in the cultural life of the City, and shall continue to cater for community events such as boat races and festivals.*
- *the Cove should be promoted as Hobart's centre for cultural and recreational activities. Such activities shall be encouraged across the Cove, with an emphasis on cultural activities in the main Cove, including between Hunter Street and Salamanca Place and the Theatre Royal, Museum and Art Gallery.*

Of particular relevance is the reference to this site in the Strategic Directions Figure 2 of the Planning Scheme for mixed use development opportunities, consistent with the MPDC Act.

## AllUrbanPlanning

*Figure 5 – Excerpt from Figure 2- Strategic Directions of Part B of the Sullivans Cove Planning scheme. Note the specific reference for mixed use development opportunities consistent with the Macquarie Point Development Corporation Act*

The Strategic Framework is heavily influenced by the urban design analysis of the Sullivans Cove Planning Review 1991. As discussed in Leigh Woolley's accompanying advice, this urban design foundation is equally relevant to the concepts which underpin the reset masterplan. In particular, the reset masterplan:

- responds to the urban pattern of Sullivans Cove;
- maintains important view lines;
- sets a built bulk and height standard that will be sympathetic to the natural topography of Sullivans Cove, the amphitheatre and the Regatta Point Ridge;
- provides a mechanism to ensure that future development has a respectful relationship with existing buildings and the landscape; and
- provides for the creation of primary, secondary spaces and urban gardens.

### 3.4 The Objectives and Performance Criteria of the relevant Activity Area (Part D);

The objectives for use and development in Activity Area 3.0 are represented as Desired Future Character Statements in clause 32.3 of the 'Macquarie Point Site Development Plan' under Part F of the Planning Scheme.

The proposed amendments involve some adjustment to the Desired Future Character Statements, as well as the use and development provisions of the SDP to reflect the reset masterplan. These changes remain consistent with the strategic framework of the Planning Scheme.

## 4. Assessment of the Reset Masterplan

### 4.1 Urban Form

The proposed amendments include some change to the Desired Future Character Statements (32.3), height and siting plans (Figures 32.3 and 32.4), development standards (32.7.3 to 32.7.7) and general considerations (32.4) to implement the height, siting and design concepts from the reset masterplan.

The following concepts are embodied in the proposed amendments and are considered to be highly consistent with the Objectives for Urban Form under Section 23.2:

- the bulk, height and siting of buildings are to be sympathetic to the natural topography of the headland, escarpment surrounding the Cenotaph and reinforce the natural shoreline;
- maintain important views as identified on Figure 32.4 of the SDP;
- enrich the meaning and memory of the changing nature of Macquarie Point over time through expression of the use and development layers from the past including the topography, natural shoreline, Round House, Goods Shed and Royal Engineers Building;
- develop a network of connections through and around the site including a series of primary shared street spaces extending north from Evans Street towards the centre of the site; and smaller and more intimate secondary spaces. Their position can be adjusted to suit specific development as it unfolds;
- reinforce a well-defined built edge to Evans Street, set back to highlight the Goods Shed as a public entry point to the site;
- built form is to be 'set in the round' on the 'cove floor';

**AllUrbanPlanning**

- buildings are to incorporate articulated roof forms to provide interest when viewed from elevated surrounding areas of the Cenotaph and Domain.

**4.2 Building envelopes and view lines**

The former masterplan identified and modelled specific building height areas that translated to Figure 32.4 of the SDP. The proposed updates to that Figure reflect an overlay of the use areas of the reset masterplan with the heights of the former masterplan. Where the 2017 use areas extended over more than one 2015 building envelope, the lowest of the 2015 building envelope heights has been taken to be the permitted height for the proposed replacement Figure 32.4.

Applying the lowest of the 2015 building heights as the permitted height for the 2017 use areas ensures that the 2017 Planning Scheme amendments go further in ensuring that the important views and sightlines are not unreasonably impacted.

The following figures compare the permitted building envelopes of the existing Figures 32.3 and 32.4 with the proposed replacement envelopes under the new Figures 32.3 and 32.4.

*Figure 6 – 3D modelled building envelopes of the existing Figures 32.3 & 32.4 of the Planning Scheme*

AllUrbanPlanning

Figure 7 - 3D modelled building envelopes of the proposed replacement Figures 32.3 & 32.4 To be updated for consistency with Figures 32.3 and 32.4

Figure 8 – Comparison of 3D modelled building envelopes of the existing and proposed replacement Figures 32.3 & 32.4 To be updated for consistency with Figures 32.3 and 32.4

Leigh Woolley has undertaken a comparative analysis of the proposed reduced building envelopes as part of his advice which accompanies this proposal. That work demonstrates that the proposed permitted envelopes under the replacement Figure 32.4 will significantly reduce the impact on those envelopes as viewed from the previously established important viewing points, including from the Cenotaph and within the cove.

Height area F on Figure 32.4 is set at 11m AHD which equates to approximately 4m above ground level. This will ensure that view 9 to and from the Cenotaph to the centre of the Key Public Space will be maintained. This view line is illustrated in a concept section below in Figure 9.

AllUrbanPlanning

Figure 9 - Concept section through Use Area 2.2 on Figure 32.1 showing Height Area F on Figure 32.4 will preserve view 9 on Figure 32.2 (Source MPDC)

Height areas A, G and H on Figure 32.4 have been set below surveyed heights of the top of the escarpment adjacent to the north. These envelopes have been shaped to ensure that the siting and alignment of buildings adjacent to the escarpment are sympathetic to the natural topography of the headland, amphitheatre and escarpment surrounding the Cenotaph, and reinforce the natural shoreline. Development in this area will also be subject to Performance Criteria P1 of 32.7.2 that prevent buildings from protruding above the escarpment when viewed from the Cenotaph.

#### 4.3 Traffic

Under the reset masterplan, development will continue to have strong pedestrian and cycling links within the site itself and to reconnect with its surrounds including the Hobart waterfront and CBD, Intercity Cycleway and Queens Domain. The street network will minimise vehicular access to heart of the site. To ensure that future transport networks can be incorporated within the site, corridors for the movement of light rail and heavy vehicles will be reserved where they traverse the site.

The proposed network includes essentially two layers:

- Movement of vehicles will be focused on Evans Street, and the access from the Tasman Highway to the Escarpment area. Access to particular development sites and car parking areas will be off Evans Street or the Escarpment car park access. Whilst the internal street network has not been precisely defined, it is not expected that there would be connectivity through the site, for instance between the Escarpment and Evans Street.
  - A potential future connection between Evans Street and the Regatta Grounds (possible “Northern Outlet”) has been identified, but this has not been assessed as part of this current proposal.
  - Light rail, should it connect to the site in the future, would enter from Davey Street, around the bottom of the escarpment to the Northern Outlet alignment.
- The pedestrian movement network comprises various corridors crossing the site, in addition to the vehicular corridors described above which would also provide for pedestrian movement. There will be two primary pedestrian corridors, meeting at right angles in the centre of the site. One corridor is essentially an extension of the Brooker Avenue alignment. The other primary corridor is a continuation of Franklin Wharf, connecting Hunter Street with the site through the University of Tasmania/IXL buildings between Hunter Street and Evans Street. The nature of these connections, and any road crossings, has not been determined at this stage. Secondary pedestrian corridors will connect to the primary corridors and locations including the Cenotaph/Regatta grounds, and the Mac 2 Cruise Ship terminal.
  - Access for cyclists would utilise a combination of the vehicular network and the pedestrian network, providing a high degree of accessibility through the site.
  - A pedestrian link that traverses the escarpment is to be provided between the Cenotaph and the Key Public Space.

## AllUrbanPlanning

The reset masterplan maintains the proposal for a maximum of 350 off-street parking spaces on the Macquarie Point site, with an additional 350 spaces in the escarpment car park area.

The accompanying Traffic Impact Assessment by GHD indicates that the volume of peak period traffic activity associated with the reset masterplan is generally less than assumed in the previous (2015) assessment. An increase of some 50 vehicles per hour is expected in the PM peak, departing the site via Evans Street. However in the context of the overall volume of traffic activity from Macquarie Point, and already on the network in the vicinity, this increase is relatively minor. The previous assessment identified some improvements that could be made to the intersection of Evans Street with Davey Street to improve egress from the site in the PM peak in particular.

GHD advises that the following traffic recommendations that applied to the former master plan and existing SDP provisions remain appropriate for this current proposal and are considered to still apply:

- In the absence of clear infrastructure-based solutions to improving egress from the development site, it is recommended that travel demand management measures be considered as part of the development planning. Some measures are already in place, such as a limitation on car parking and provision of high quality pedestrian and bicycle links within the site. Other measures may include:
  - *Work with Metro Tasmania to optimise public transport service integration into the development to maximise public transport mode share.*
  - *Provide high quality pedestrian and bicycle connections to the CBD and surrounding areas.*
  - *Promote extended opening hours for retail and other activities on the site, to encourage people to “linger longer” and flatten the profile of departures from the site in the PM peak period.*
  - *Encourage longer-stay parking activity by visitors in particular, so that parking turnover does not create unnecessary traffic movement.*

#### 4.4 Market Impacts

The market impacts of the reset masterplan are assessed in the accompanying update by AEC Group.

The former masterplan took a more prescriptive approach to allocating floorspace across uses, whereas the new reset masterplan designates maximum floorspace caps to various uses - enabling flexible delivery of the development over a 15 year+ horizon.

Table 1 compares the land uses and respective floorspace contemplated by the respective masterplans.

| 2015 Masterplan    |                                    | Reset Masterplan   |  |
|--------------------|------------------------------------|--------------------|--|
| Proposed Land Uses | Gross Floor Area (m <sup>2</sup> ) | Proposed Land Uses | Maximum Gross Floor Area (m <sup>2</sup> ) |
| Education/Research | 13,616                             | Education/Research | 50,000                                     |
| Commercial         | 54,462                             | Commercial         | 30,000                                     |
| Retail             | 9,413                              | Retail             | 10,000                                     |
| Hotel              | 15,695                             | Hotel              | 20,000                                     |
| Residential        | 43,949                             | Residential        | 15,000                                     |

Table 1 – Proposed Land Uses and Floor Space – reset Master Plan v Former Master Plan

Principally, the difference in quantum of floorspace envisaged in the reset masterplan compared with the former masterplan is a substantial increase in floorspace for education and research uses (from 13,600m<sup>2</sup> to a potential maximum of 50,000m<sup>2</sup> GFA). Other differences include:

- The maximum floor area limit for Residential uses has been reduced from 43,949 to 15,000.
- Commercial floorspace is reduced to a maximum of 30,000m<sup>2</sup> from circa 54,500m<sup>2</sup>.
- Hotel uses are increased slightly, from around 16,000m<sup>2</sup> to a maximum of 20,000m<sup>2</sup>.
- Retail uses remain broadly unchanged, previously circa 9,400m<sup>2</sup> to 10,000m<sup>2</sup>.

AEC make the following comments on potential market impacts of the reset masterplan:

#### **Commercial**

The proposed commercial space at Macquarie Point was not expected to directly compete with commercial space in the Hobart CBD. The commercial component at Macquarie Point is expected to provide for non-traditional floorspace, accommodating occupiers which have synergistic relationships to Antarctic research and associated industry.

Additionally, given the reset masterplan contemplates a reduced quantum of commercial space, market impacts are likely to remain benign.

#### **Education/Research**

The increase in quantum of floorspace for education/research uses is not expected to have impact implications for existing markets given the specific purpose the space will be utilised for.

#### **Hotel**

The proposed hotel uses were not expected to adversely impact the existing hotel market as significant demand for new hotel accommodation at Macquarie Point was expected to be generated by the development itself - accommodating visiting professors, researchers, academic and professional staff participating in Antarctic research.

The slight lift in contemplated hotel floorspace is not expected to result in a different impact to that assessed in 2015. Long term staging of the hotel development is likely to further mitigate any negative impacts the hotels may have on existing supply across the Hobart hotel market.

## AllUrbanPlanning

### Retail

The 2015 impact assessment found Hobart CBD was expected to remain as the premier non-food retail destination for residents and some impact could be felt by other retail facilities throughout Hobart. Notwithstanding, the retail facilities offered at Macquarie Point were assessed as likely to have negligible impact on the overall retail hierarchy, being of a different retail offering and staged over a considerable number of years which allows the spreading of impact and absorption by sales growth. The floorspace contemplated in the reset masterplan does not alter this assessment.

### Residential

The reset masterplan has a reduced focus for residential development now reducing the maximum floor area limit from 43,949m<sup>2</sup> to 15,000m<sup>2</sup>. This limit reflects the shift under the reset masterplan to a more civic focus for the site and to ensure that uses contribute to the interest and activity of the area. The proposed amendments include standards to manage the potential for land use conflict with the working port, WWTP and use of Macquarie Point as a major public entertainment venue. These matters are discussed below.

#### 4.5 Infrastructure

The accompanying Updated Infrastructure Assessment prepared by Pitt & Sherry confirms that, in broad terms, there is sufficient capacity within existing power, communication, sewer, water and gas networks to service development in accordance with the reset masterplan with only limited off site works and payment of standard authority charges.

As with the former Masterplan, the specifics of the stormwater system have not been fully resolved at this stage. However, given its proximity, it is expected that should the existing connections not be acceptable, any new development would be able to discharge readily to the river.

#### 4.6 Waste Water Treatment Plant Impacts

The requirements under clause 32.14.6 of the Planning Scheme mandate that twenty uses cannot be sited within 400 m of the Macquarie Point Wastewater Treatment Plant (WWTP) whilst it is still operating, unless a site-specific report is provided that satisfies P2 of clause 32.14.6.

The Corporation proposes amendments to clause 32.14.6 in line with the State Planning Provisions for sensitive uses with a distance of 400 m from the boundary of the WWTP.

The existing Clause 32.14.6 flowed from evidence provided to the TPC during hearings on the SDP amendments to the Planning Scheme in 2016. At that time, all evidence was on a 'desktop basis'. The accompanying November odour audit and modelling report prepared by Environmental Dynamics brings new odour and noise modelling evidence informed by on site odour and noise sampling.

Environmental Dynamics concludes that:

- *the primary sedimentation tank (PST) biofilter, the main stack and the cogeneration stack of the WWTP are not the dominant odour sources that were expected from the 2014 desktop study;*
- *The PST biofilter has almost zero emissions; the cogeneration stacks emissions are very hot and disperse very well due to their buoyancy; and the trickle filters are not large odour sources, and the odours are further reduced by treatment ahead of discharge through the main stack;*
- *The 2017 odour audit and sampling has found the main odour sources are the emissions from the tanker unloading, and fugitive odours from the nearby inlet works area; and*
- *If these odour sources are mitigated, then the remaining odour sources are such that a reduction of the 400-m attenuation distance to a 200-m attenuation distance is appropriate even without further odour mitigation.*

### AllUrbanPlanning

The following Figure 10 shows the modelling predictions that support the proposed attenuation distance reduction.

Figure 10 - Maximum odour GLC (1 hour) predictions for a future scenario in which fugitive emissions from tanker unloading and the inlet works are mitigated. The design GLC is 2 OU (1 hour), so the predictions are consistent with allowing the set back to be relaxed to 200 m. (Source Environmental Dynamics November report 2017)

On the 18 September 2018, TasWater and the Government announced that the WWTP would be decommissioned and removed within 4 years. Dr Carter's report supports the discretionary use status for consideration of sensitive uses over the intervening period.

#### 4.7 Heritage

As outlined in the accompanying report by Austral Tasmania, the site has been subject to a number of heritage investigations which are relevant to the proposed Planning Scheme amendments. These are:

- Macquarie Point Railyards Site Heritage Review, final report prepared for Macquarie Point Development Corporation, November 2013: This report was prepared to review the existing knowledge about heritage places and values within the site; define what places were of the highest level of cultural significance; and to establish priorities for future work;
- Built Heritage Assessment for the Macquarie Point Site, final report prepared for Macquarie Point Development Corporation, May 2015: This report assessed the cultural significance of the Goods Shed and the Red Shed located on the site; and
- Macquarie Point Historical Archaeological Test Excavations, final report prepared for Macquarie Point Development Corporation, July 2015: This report contains the results of a series of archaeological test excavations carried out in December 2014 in accordance with Planning Permit PLN-14-01210-01.

## AllUrbanPlanning

Schedule 1 of the Planning Scheme applies to carrying out 'building or works' on places of cultural significance and excavation within places of archaeological sensitivity. The following summarises key findings relevant to the Planning Scheme provisions.

### Conservation of Places of Cultural Significance

The SDP area currently contains only the Royal Engineers Building, Goods Shed and the Red Shed as places of cultural significance in Table 1 and Figure 5 of Schedule 1.

The proposed amendments do not affect these listings and future 'building or works' to these places would therefore continue to be subject to the provisions of clause 22.4 of the Planning Scheme.

### Places of Archaeological Sensitivity

The site includes two places of archaeological sensitivity identified in Table 2 and Figure 5a of Schedule 1. These two places are the:

- 'Royal Engineers Headquarters and Kings Yard' (Ref. No. 12); and
- 'Hobart Rivulet - Domain Diversion Tunnel' (Ref. No. 90).

Other parts of the site are not identified in the Planning Scheme as places of archaeological sensitivity, although the general provision of clause 22.6.1 relating to excavation within the planning area may be applicable. Two phases of archaeological test excavations have occurred within site no. 12, and no investigations have been carried at site no. 90 which only partially intersects with the site and is an operating item of infrastructure.

Test excavations within site no. 12 occurred in 2008 and in December 2014. The spatial definition of site no. 12 in Figure 5a has been found to be excessively large in both the 2008 and 2014 works, confirming remnant and discrete areas of archaeological potential, but high levels of past disturbances which have impacted on the archaeological potential of the place.

The Test Excavation report (July 2015) provides a revised spatial definition of the archaeological sensitivity of the place in response to this reduced level of potential (see Figure 1 of the Test Excavation report). Recommendations have been made according to the assessed levels of significance of particular sites or features within site no. 12, with an emphasis on in situ preservation of the most significant sites, to salvage excavation in advance of proposed redevelopment for other features.

Excavation within site no. 12 does not currently satisfy the exemption category of clause 22.6.2. However, the Test Excavation report recommends that no further archaeological investigation is required for excavations occurring outside of the revised sensitivity zoning. In this scenario a statement could be provided by a qualified archaeologist that refers to clause 22.6.3, that the site has been surveyed previously and found not to be of archaeological significance.

Excavations occurring within sites defined in the Test Excavation report as having archaeological sensitivity will require the approval of an Archaeological Sensitivity Report in accordance within the Planning Scheme definition.

The proposed amendments do not affect the application of these provisions.

## 4.8 Contaminated Land

A site Remediation Strategy Overview by AECOM accompanies this request and provides an update as of 2017.

Historic contamination at the site is a legacy of past land uses, in particular the former gasworks in the vicinity of the southwest area of the site, fuel handling and transfer in the central portion of the site, and historical bulk fuel storage facilities located in the general eastern portion of the site. The

## AllUrbanPlanning

remediation of the site presents a significant challenge, both technically and financially, and the corporation is following a complementary approach to planning and remediation. That is, the level of remediation will be informed by the specific land uses in a given area, and likewise, planning will be informed by the nature and extent of contamination on Site.

The original Site Remediation Strategy was prepared in 2015 based on the information available at the time, and later informed by the release of the vision and master plan developed for the site. In December 2016, the Tasmanian Government announced that it had reset the vision for Macquarie Point. An updated Site Remediation Strategy has been prepared to support the new vision and the future redevelopment of the site (refer AECOM Site Remediation Strategy Update 2017, Macquarie Point Development Project DRAFT, dated 19 May 2017).

In order to support the new vision, it is important therefore that the Site Remediation Strategy is flexible and able to respond to changes to development proposals over time, as well as respond to changes in remediation technologies that may occur over the life of the project. The ongoing purpose of the Site Remediation Strategy is to provide:

- A flexible framework for site remediation that is commensurate with the Site Development Plan and integrates with ongoing development of the Site; and
- An overarching approach for remediating the site with consideration to technical, financial, timing, logistical and regulatory considerations.

It is anticipated that the Site Remediation Strategy will be refined and updated as:

- Site assessment and remediation works are completed;
- The delivery of the Site Development Plan progresses;
- Land use details are more refined; and
- New data becomes available.

Following release of the 2015 Site Remediation Strategy, detailed investigations and remediation works have been completed at the Site. These works have helped to increase the confidence around the remediation approach and the indicative costs for overall remediation costs for the Site.

The MPDC Act and the contaminated land provisions under Section 32.14 of the SDP enable an accredited Environmental Auditor to be appointed to certify that parts of the Site are suitable for the proposed purposes.

The Corporation has engaged an independent Site Environmental Auditor to provide confidence to key stakeholders that environmental investigations and remedial activities have been completed to a level compliant with required standards. As there are no legislated audit procedures in Tasmania, the Corporation is following the Victorian audit scheme. The ultimate outcome of the Environmental Audit is to obtain a site suitability statement confirming the site's suitability for intended future uses.

There has been extensive consultation and liaison with the Corporation's Site Environmental Auditor as works have progressed, and, at the time of preparing this revised Site Remediation Strategy, the Corporation is preparing to lodge a submission with the Site Environmental Auditor to achieve sign-off for the first portion of the site- the Goods Shed.

Remediation works associated with the Roundhouse Refuelling Area and the SeaRoad Shed are also approaching the stage where the Corporation will prepare a submission for these areas to achieve sign-off.

#### 4.9 Aboriginal Heritage

Aboriginal heritage investigations of the site have been undertaken and no sites of significance have been identified.

#### 4.10 Climate Change

To support the Infrastructure Australia submission for funding, the Tasmanian Government commissioned GHD to prepare a climate change impact assessment in July 2012. The purpose of the assessment was to review the effect of storm surges and sea level rise on the proposed development of the Macquarie Point site.

The analysis indicated that:

- 1 in 100 year Inundation Level due to sea level rise and storm surge for the site is 2.3m above Australian Height Datum (AHD); and
- A 0.5m freeboard will be required for habitable floors (i.e. 2.8 AHD minimum level).

The Development Standard for Inundation Hazard under Clause 32.7.9 of the SDP will remain and ensure that the finished floor level of a habitable room is no less than 2.8m above AHD.

## 5. Amendment Sullivans Cove Planning Scheme

#### 5.1 Draft Amendment

The draft amendment is to amend the Site Development Plan under Section 32 within Part F of the Sullivans Cove Planning Scheme 1997. The proposed amendments to the Ordinance and Figures of the Planning Scheme and are detailed in Appendix A.

#### 5.2 Reasoning for the Proposal

The purpose of the SDP flows from the Minister's directions under Section 36(2) of the MPDC Act to prepare a replacement site master plan under Section 37 of the MPDC Act reflecting the Mona Vision.

#### 5.3 Changes to the Ordinance and Existing Figures

##### **Amendment - 1**

Sullivans Cove 'Gateway' Activity Area 3.0

Update place references to reflect the spatial terms used in the reset masterplan.

##### **Amendment – 2**

Replaces the Macquarie Point Site Development Plan under Section 32 of the Planning Scheme involving the following amendments:

##### **Amendment 2.1**

Amend Clause 32.1.1 of the SDP to change the reference from the former master plan to the reset masterplan.

##### **Amendment – 2.2**

Amend the definitions for Cove Floor and Primary Space to reflect the new layout under the reset masterplan.

**Amendment – 2.3**

Insert a new clause that allows consideration of interim or temporary use and development for a period up to 5 years providing buildings are located and designed in a manner that does not prejudice the future development of the area or appropriate pedestrian, cycle and vehicle linkages through the site to adjacent Activity Areas.

**Amendment -2.4**

Amend the Desired Future Character Statement under 32.3.4 to reflect the removal of a physical building envelope from the reset masterplan layout. The former Round House is now to be acknowledged as a landscape element.

The Key Public Space located close to the intersection of the Brooker and Tasman Highways and Davey and Evans Streets will now form the landmark entry to the site for those approaching from the CBD.

**Amendment – 2.5**

Amended the Desired Future Character Statement under 32.3.7 in accordance with the Urban Design advice of Leigh Woolley to ensure that buildings on the Cove Floor are to be freestanding and built in the round as opposed to the regular street grid of buildings on natural ground.

**Amendment – 2.6**

Amend the view lines under the Desired Future Character Statement at Clause 32.3.8 to:

- Replace the reference to the Water to Water Promenade with the view aligning NE/SW from Sullivans Cove to the Derwent River;
- Insert a new reference to the important view to Kangaroo Bay;
- Insert a new reference to the view along the Key Public Space;
- Remove the previous view 4 from the centre of the Round House to the Cenotaph and replace with a new view 9 to and from the Key Public Space to the Cenotaph; and
- Remove view 3 from Davey Street to the centre of the Round House and replace with a new view 10 from Davey Street to and from the entry to the Key Public Space; and
- Insert new view line 11 from the Cove Floor to the Cenotaph.

The updated views are shown on the amended Figure 32.2 (Amendment 2.26 below) and reflect the reorganisation of the site under the reset masterplan. The reset masterplan acknowledges the former Round House but reduces its emphasis with the focus now the central Key Public Space. View lines 3 and 4 are amended and replaced with views 9 and 10 accordingly.

View 9 sits between the two height areas D and E shown on Figure 32.4 to the north of the Key Public Space. This view is discussed further in relation to Amendment 2.24 below.

**Amendment – 2.7**

Amend the Desired Future Character Statement under Clause 32.3.9 to remove the reference to the industrial saw tooth roof form and insert a new example for rooftop gardens.

The reset masterplan moves away from the industrial/ saw tooth form focus of the former masterplan.

**Amendment – 2.8**

Amend the Desired Future Character Statement under Clause 32.3.11 to respond to the updated spatial network of the reset masterplan and associated replacement Figure 32.3.

## AllUrbanPlanning

As discussed in the updated Traffic Impact Assessment and Section 4.3 above, external access and circulation arrangements under the former masterplan do not alter under the reset masterplan or the proposed amendments.

### **Amendment – 2.9**

Insert a new Desired Future Character Statement at Clause 32.3.12 noting the requirement for a direct pedestrian link between the Key Public Space and Cenotaph that traverses the escarpment. It is expected that this will most likely require installation of a lift or similar for accessibility.

### **Amendment – 2.10**

Insert a new Desired Future Character Statement at Clause 32.3.13 to reflect the intended gateway building at the western entry of the site in the vicinity of the Concert Hall and intersection of Davey and Evans Street.

As discussed in the Urban Design notes prepared by Leigh Woolley it is envisaged that this building will be highly transparent and allow visual connectivity through the envelope to the Key Public Space and beyond from Davey Street. Suitable designs may include lifting the building above the ground plane in whole or part to assist connectivity. The building will also provide an edge to the primary site alignment of the Key Public Space.

### **Amendment – 2.11**

Insert a new Desired Future Character Statement at Clause 32.3.14 to ensure that developments for noise sensitive uses are adequately designed and constructed to protect residential amenity and reduce the potential for land use conflict that may compromise the use of Macquarie Point as a major public event space.

### **Amendment – 2.12**

This amendment replaces the reference to the key drivers and principles of the former masterplan with the Strategic Principles of the reset masterplan. These principles are included in Section 2.2 above.

### **Amendment 2.13**

Insert a new matter for consideration under Clause 32.4 requiring consideration of the impact of proposed use and development on the viability of Macquarie Point as a major public event space.

### **Amendments – 2.14**

These amendments rearrange the spatial application of use provisions to reflect the reset masterplan.

It is not proposed that the amendments translate the same fine grain use arrangements as shown conceptually on the Mona Vision. A relatively pragmatic and flexible approach to the siting and arrangement of uses is considered desirable to accommodate the range of development options that may arise in the future.

### **Changes to Use Table 32.5.1 for Arts and Institutional Use Area**

- Reapplies the three Use Areas as shown below with a replacement Figure 32.1;
- Renames the Commercial and Institutional Use Area 1 to Arts and Institutional;
- Removes Gambling Premises, Hospital Services and Recreational Boating Facility uses from the Use Table at 32.5.1. Those uses are not considered either desirable or practical under the reset masterplan and consequently are now proposed to be prohibited;

### AllUrbanPlanning

- Inserts Light Industry as a discretionary use to allow consideration of small manufacturing or processing uses that will not cause a nuisance and be compatible with the character of the area;
- Moves Passive Recreation from discretionary to an exempt use;
- Inserts Exhibition Centre and Minor Sport and Recreation as Permitted Uses;
- Inserts Commercial Port Operations as a discretionary use to allow for a transition to the working port;
- Removes Recreational Boating Facility as a discretionary use with the effect that is now prohibited within this Art and Institutional Area; and
- Inserts Major Sport and Recreation, Railway Terminal and Service Industry as discretionary uses. Major Sport and Recreation is already a discretionary Use in the Mixed Use Area under the existing Site Development Plan. It is considered appropriate that such uses can be considered given the intention for Macquarie Point to act as a major public event space.

#### **Changes to Use Table 32.5.2 for Mixed Use Area** Amends the Use Table at 32.5.2 to:

- Moves Passive Recreation from discretionary to an exempt use
- Inserts Childcare Centre and Exhibition Centre as a permitted uses;
- Inserts Manufacturing Sales as a Permitted Use in the Goods Shed with that use otherwise remaining discretionary;
- Moves Minor Sport and Recreation from discretionary to permitted and Inserts Major Sport and Recreation as a discretionary use;
- Inserts Light Industry as a Discretionary use for the reasons discussed above under Amendments 2.14;
- Amends the use condition for Car Park to continue the permitted status of a carpark adjacent to the escarpment given the change from Open Space Area to Mixed Use area under replacement Figure 32.1 (currently permitted in the same location);
- Inserts a new Use Condition for Residential Accommodation to make it only permitted in Areas 2.1 and 2.2 of Figure 32.1 where above ground floor level (except for access);
- Removes Recreational Boating Facility on the basis that this Use Area does not have direct access to the water and is therefore not suitable for marinas and the like; and
- Inserts Warehouse as a discretionary use.

**Changes to Use Table 32.5.3 for Open Space Use Area** Amends the Use Table at 32.5.3 to:

- Removes the reference to the 'Escarpment Park' from the use condition for Car Park in the Open Space Area to reflect the amended spatial application of the use areas under Figure 32.1. (The permitted status for a carpark adjacent to the escarpment is maintained through the amendment to the Car Park use condition included in Amendment 13 above);
- Inserts Car Park as a discretionary use on the condition that the use is underground. The Interim Use Clause under Amendment 2.3 above will allow for the granting of a temporary planning permit for parking on grade; and

Inserts Research and Development Centre as a discretionary use subject to the condition that the use is directly associated with a use in the Arts and Institutional Area. This would allow for the possibility of some connection for a research and development complex between the two Building Areas on either side of the Key Public Space. Any associated development would be outside the permitted building envelopes under Figure 32.3 and subject to the desired future character statements, including the need to preserve important view lines and the central Key Public Space.

#### **Amendment – 2.15**

Amend the deemed to comply standard under A1 of Clause 32.6.1 to reflect updated GFAs associated with the uses of the reset masterplan. As discussed in Section 4.4 above, AEC Group have considered the reallocated GFAs in the market impact assessment and conclude that the extent of these uses will not significantly affect the CBD or the activity centre hierarchy.

The reset masterplan has a reduced focus for residential development now including a 15,000m<sup>2</sup> maximum Gross Floor Area within Use Areas 2.1 and 2.2 shown on Figure 32.1 down from 50,000m<sup>2</sup>. This limit reflects the shift under the reset masterplan to a more civic focus for the site and to ensure that uses contribute to the interest and activity of the area.

#### **Amendment -2.16**

Amend Clause 32.6.2 to apply more generally to Residential and Visitor Accommodation Uses throughout the site in order to protect residential amenity and reduce the potential for land use conflict with the working port and the use of the site as a major public event space.

#### **Amendment – 2.17**

Amend A2 of Clause 32.7.2 to:

- remove the reference to the Round House;
- remove the reference to specific roof forms and instead include a floor area threshold of 300m<sup>2</sup>, above which the treatment of roofs will be discretionary.

The 300m<sup>2</sup> threshold is considered an appropriate threshold that allows buildings of a smaller scale that will not have significant impact as viewed from elevated areas. It is not considered that an appropriate design outcome can be specified as a Deemed to Comply Standard for buildings over that size. Over this size it is considered preferable that roofs of buildings provide interest and are assessed under the discretionary considerations of the existing P2.

#### **Amendment – 2.18**

This amends P1 of Clause 32.7.2 to ensure that buildings sited adjacent to the headland do not protrude above the escarpment when viewed from the Cenotaph.

#### **Amendment – 2.19**

## AllUrbanPlanning

This amends A3 of Clause 32.7.2 to ensure that buildings are built within the areas on 32.3 but don't necessarily need to match the shape of the envelopes.

### **Amendment – 2.20**

This amends Clause 32.7.3 and results from a move from the rectilinear form and relatively small lots of the former masterplan and the existing Development Framework under Figure 32.3. Flexibility is provided under the reset masterplan for buildings to be sited within larger Building Areas with a focus on forming the spaces, but not necessarily occupying the entire width of the longer street frontages of these building areas. The Performance Criteria provide for a variation in building shapes provided that the overall impression is of retention of continuous alignment of space.

### **Amendment – 2.21**

Amend Clause 32.7.5 to reflect the updated layout and urban design rationale of the reset masterplan. This Clause currently manages the siting of buildings within the open space area between the northern edge of buildings shown on the Development Framework Figure 32.3 and the foot of the escarpment.

This clause is now amended to apply to buildings along the foot of the escarpment within Use Area 2 on Figure 32.1.

### **Amendment – 2.22**

Amend the Objective and P1 of Clause 32.7.6 a to replace the term interaction with interest in response to a recognition that the civic nature of some buildings mean that it may not be practical in all cases to provide windows in the frontage of a building.

### **Amendment – 2.23**

Amend Clause 32.7.10 as follows:

- A1 – remove the reference to east west as the 6m wide links on Figure 32.3 are no longer only running east west.
- P1 – update the references in part b) to the Strategic Principles in the reset masterplan.

### **Amendment – 2.24**

Amend the Attenuation from the WWTP Clause 32.14.6 to:

- insert a new P1 for consideration of sensitive uses within the 400m
- delete A2 and P2 dealing with non- sensitive uses.

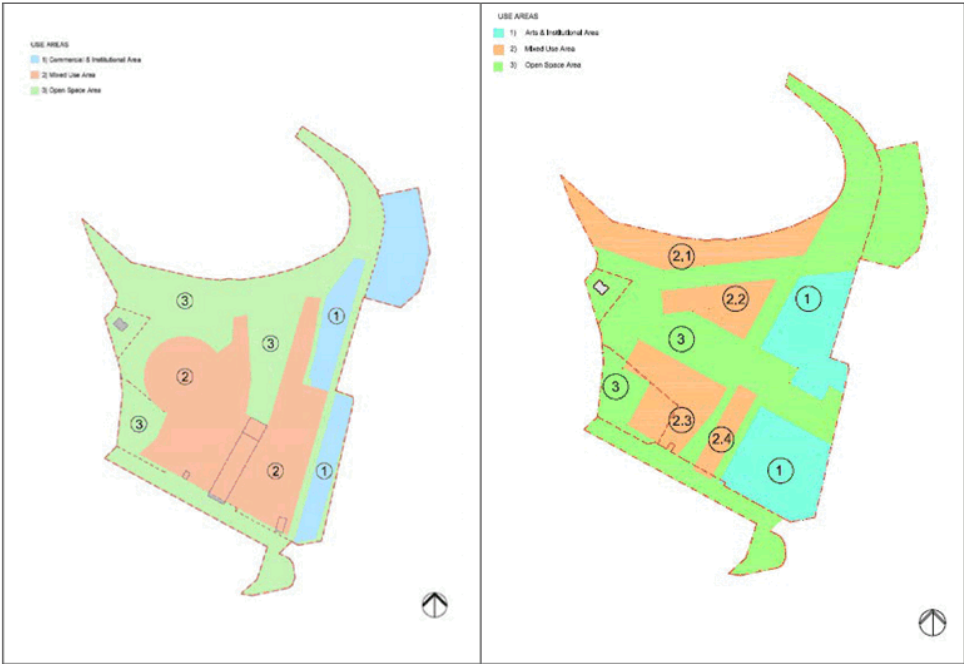

These changes are consistent with the approach under the Attenuation Code of the State Planning Provisions.

### **Amendment – 2.25**

Update the Use Areas to reflect the reset masterplan by replacing Figure 32.1

AllUrbanPlanning

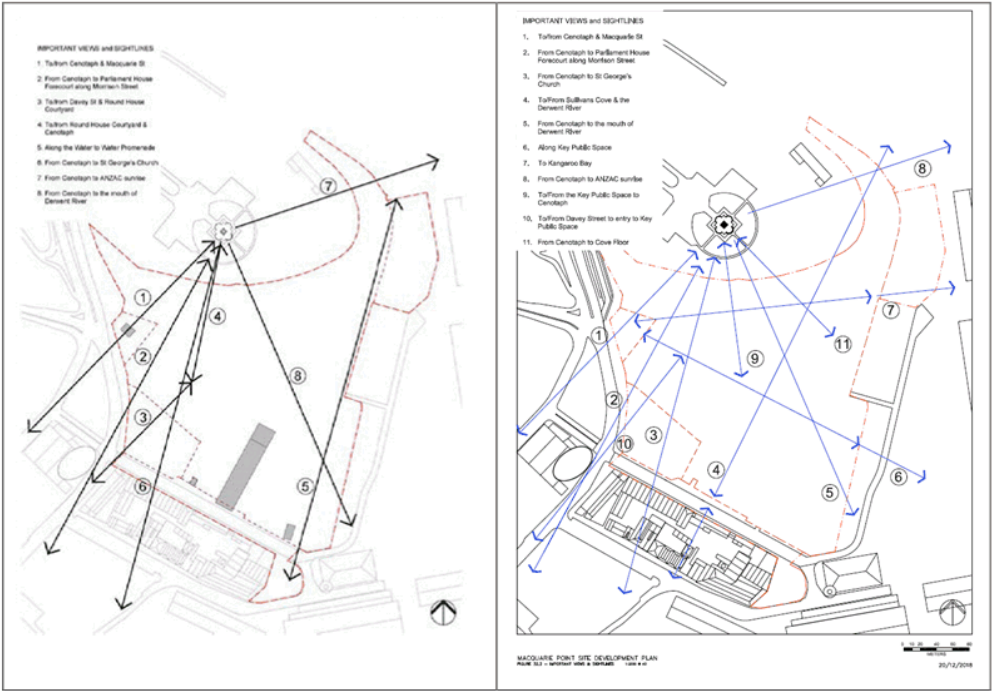

Existing Figure 32.1

Proposed replacement Figure 32.1

Amendment – 2.26

Update the view and sightlines to reflect the reset masterplan by replacing Figure 32.2.

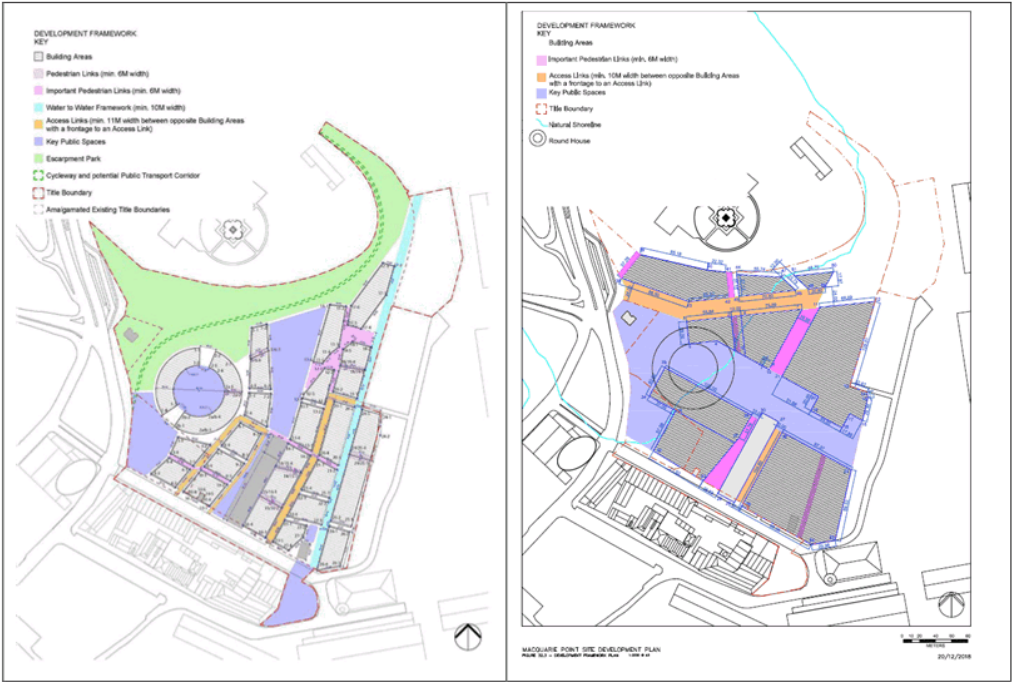

Existing Figure 32.2

Proposed replacement Figure 32.2

Amendment – 2.27

Update the Development Framework to reflect the reset masterplan by replacing Figure 32.3 and associated Table 32.3.

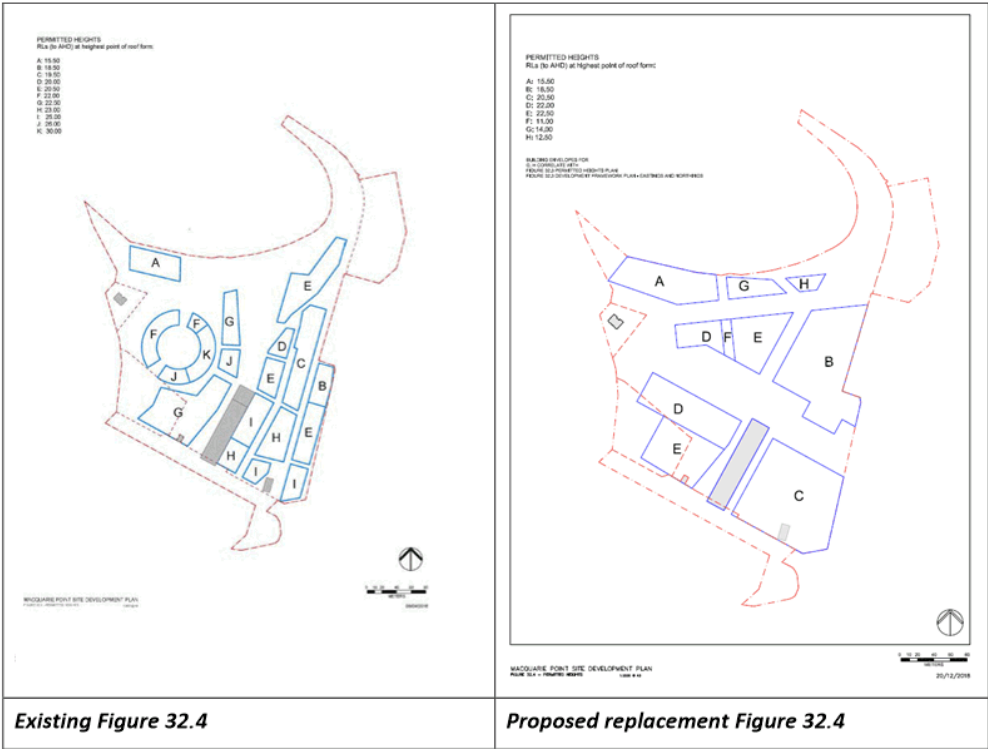

Existing Figure 32.3

Proposed replacement Figure 32.3

Amendment – 2.28

Update the building envelopes and heights as shown on Figure 32.4 with the associated detailed coordinates in Table 32.3 to reflect the reset masterplan. The changes are described in Sections 4.1 and 4.2 above.

5.4 Impact of the proposed amendments on other parts of the Planning Scheme

The following considers the proposed amendments in the context of the operation of remainder of the Planning Scheme.

Part A – Preliminary

No amendments are required to this Part.

Part B – Sullivans Cove Strategic Framework

This request demonstrates consistency with 5. Values and Strengths of the Cove, 6. Preferred Future for the Cove, 7. Planning Principles for Management of Activities in the Cove.

Part C – Application of the Scheme

No amendments are required to this Part.

Part D – Activity Area Controls

This Part includes the provisions for Activity Area 3 ‘Sullivans Cove Gateway’ under Section 18 that cover the extent of the site but essentially redirect the objectives for activities and use and development of land to the SDP. The proposed amendments do not conflict with or require amendments to this Part.

Schedule 1 – Conservation of Cultural Heritage Values

No amendments are proposed to the listings under this Schedule.

### AllUrbanPlanning

There are 3 listed buildings: Royal Engineers Building, Goods Shed and Red Shed. Buildings and works on these places are to be considered under the provisions for Conservation of Places of Cultural Significance under Section 22.4.

Figure 11 - Places of Cultural Significance (Figure SCPS)

Under Clause 22.5.2, the remainder of the SDP site is exempt from Section 22.5 Building or Works on Land Not included in Table 1.

Buildings and works which involve excavation of land within the 3 listed places or area 12 shown on Figure 5a need to either be supported by:

- A statement by a qualified archaeologist that either the site has been surveyed and not found to be of archaeological significance or that the nature of the 'building and works' will not result in destruction of any aspects of items of archaeological significance (Permitted under Clause 22.6.4) or
- Have regard to the recommendations of an Archaeological Sensitivity Report (Discretionary under 22.6.5)

AllUrbanPlanning

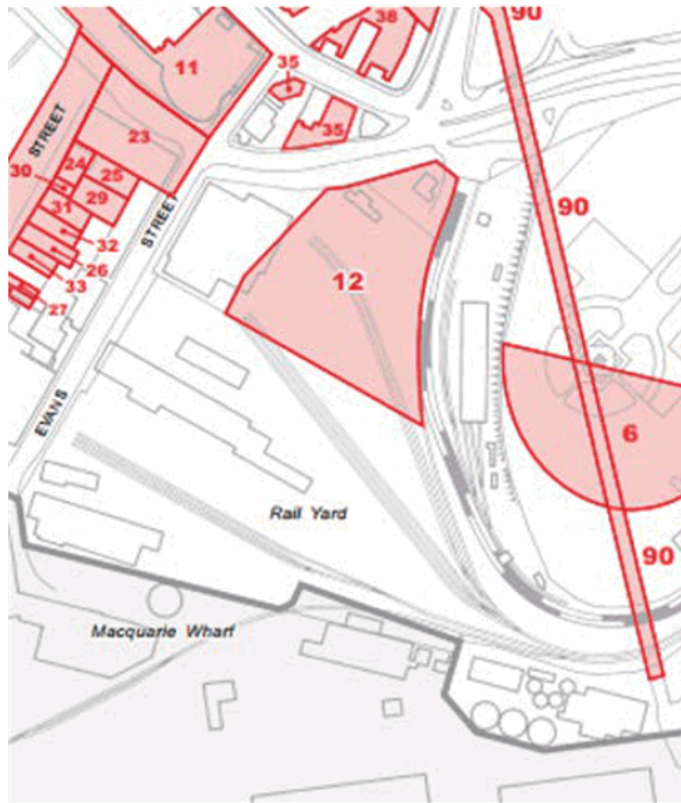

Figure 12 - Places of Archaeological Sensitivity (Figure 5a SCPS 1997)

#### **Schedule 2 – Urban Form**

Buildings within the Site are exempt from this Schedule under Clause 23.4iii. No amendments are required to this Schedule.

#### **Schedule 3 – Public Urban Space**

All buildings and works on the Site are exempt from this Schedule under Clause 24.2A. No amendments are required to this Schedule.

#### **Schedule 4 – Signs**

The signage provisions of this Schedule will continue to apply to the Site.

No amendments are required to this Schedule.

#### **Schedule 5 – Traffic, Access and Parking**

The reset masterplan maintains the same access, parking and movement principles as the former master plan. Some minor amendments are required to the Objectives for Traffic, Access and Parking in Activity Area 3 under Section 26.3 to update feature references to reflect the reset masterplan terms.

#### **Schedule 6 – Subdivision**

Under Clause 27.3.1 Subdivision within the 'Macquarie Point Site Development Plan' in clause 32 under Part F of the Scheme is 'exempt' from this schedule.

No Amendments are required to this Schedule.

#### **Schedule 7 – Demolition**

Demolition of buildings or works other than the 3 heritage listed places are exempt from this Schedule under Clause 28.4.1.

Under Clause 28.8.2 demolition (including partial demolition) involving a heritage listed place is to be supported by a Conservation Plan or report that the building (part of the building) does not have heritage value.

No amendments are required to this Schedule.

#### **Schedule 8 – Environmental Management**

No amendments are required to this Schedule.

#### **Schedule 9 – Telecommunications Infrastructure**

No amendments are required to this Schedule.

## 6. Strategy

### 6.1 Southern Tasmania Regional Land Use Strategy

The Southern Tasmania Regional Land Use Strategy (Strategy) sets the strategic direction for Southern Tasmania, to facilitate and manage change, growth and development within Southern Tasmania over the next 25 years. The Strategy is considered comprehensively in the Assessment of Market Impacts prepared by AEC Group that was submitted by the Corporation in support of the 2015 Planning Scheme amendments.

The overarching vision for Southern Tasmania in accordance with the Strategy is:

*“A vibrant, growing, liveable and attractive region, providing a sustainable lifestyle and development opportunities that build upon our unique natural and heritage assets and our advantage as Australia’s southern most region”*

The Strategy goes further to define the vision by setting out ten strategic directions to support the vision. Of particular relevance to Macquarie Point are the following strategic directions:

- Strategic Direction 2: Historically Managing Residential Growth;
- Strategic Direction 8: Supporting Strong and Healthy Communities;
- Strategic Direction 9: Making the Region Nationally and Internationally Competitive; and
- Strategic Direction 10: Creating Liveable Communities.

In order to deliver the vision and strategic directions the Strategy defines fourteen regional policies. The strategic directions identified above are tied to each of the regional policies set out below:

- Tourism;
- Strategic Economic Opportunities;
- Activity Centres; and
- Settlement and Residential Development.

Each policy is described below specifically having regard to its relevance to the site.

#### **Tourism**

## AllUrbanPlanning

This policy states that tourism has grown substantially in Tasmania in recent years. It notes that land use planning and its outcomes have numerous impacts upon the tourism industry and the degree to which Planning Schemes provide flexibility to ensure that the tourism industry can be innovative and respond to demand and the market. The policy sets out a number of tourism policies. Those of particular relevance are:

- *T1.5 Provide flexibility within commercial and business zones for mixed use developments incorporating tourism related use and development.*
- *T1.6 Recognise, planning schemes may not always be able to accommodate the proposed tourism use and development due to its innovative and responsive nature.*
- *T1.7 Allow for objective site suitability assessment of proposed tourism use and development through existing non-planning scheme based approval processes (43A application).*

The reset masterplan envisages some tourism use to be part of the development i.e. hotel, retail and as the policy highlights, flexible zoning controls are important for mixed use developments which contain tourism uses.

### **Strategic Economic Opportunities**

This policy recognises that Southern Tasmania is well placed to take advantage of its location, size, accessibility, and its history as a hub for research, creativity and learning. The policy sets out the following:

- *SEO 1.1 Protect the following key sites and areas from use and development which would compromise their strategic economic potential through planning scheme provisions: a) Hobart Port (including Macquarie and Princes Wharves) b) Macquarie Point rail yards; and c) Princes of Wales Bay marine industry precinct;*
- *SEO 1.2 Include place specific provisions for the Sullivans Cove area in the planning scheme.*

In line with the policy, the reset masterplan and amendments to the SDP have been prepared with a particular emphasis on the unique qualities of the site, revealing its history, its strategic potential as a mixed-use precinct and protecting the operation of the Port of Hobart.

### **Activity Centres**

The policy states that Activity Centres provide the focus for services, employment, and social interaction in cities and towns. They provide a broader function than just retail and commercial centres. They are also community meeting places, centres of community and government services etc. The policy sets out an Activity Centres Network noting the 'pre-eminence' of the Hobart CBD as the centre for public administration, financial services and commerce for the region and the State as a whole.

### **Settlement and Residential Development**

This policy states the importance of the location, form, type and density of residential development. The policies of relevance include:

- *SRD.1 Provide a sustainable and compact network of settlements with Greater Hobart at its core that is capable of meeting projected demand.*
- *SRD 1.5 Ensure land zoned residential is developed at a minimum of 15 dwellings per hectare (net density).*
- *SRD.2 Manage residential growth for Greater Hobart on a whole of settlement basis and in a manner that balances the needs for greater sustainability, housing choice and affordability.*

## AllUrbanPlanning

- *SRD 2.1 Ensure residential growth for Greater Hobart occurs through 50% infill development and 50% greenfield development.*
- *SRD 2.7 Distribute residential infill growth across the existing urban areas for the 25 year planning period:*
  - *Glenorchy LGA - 40% (5,300 dwellings);*
  - *Hobart LGA - 25% (3,312 dwellings);*
  - *Clarence LGA - 15% (1,987 dwelling);*
  - *Brighton LGA - 15% (1,987 dwellings); and*
  - *Kingborough LGA - 5% (662 dwellings).*
- *SRD 2.9 Encourage a greater mix of residential dwelling types across the area with a particular focus on dwelling types that will provide for demographic change including an ageing population.*

The reset masterplan provides a greater civic or public use focus for the site. It places less emphasis on residential use and development opportunities on the site. It is considered that the improved civic amenity offered by the development of Macquarie Point will continue to support inner city living and urban consolidation in and around Hobart's CBD.

### 6.2 Hobart 2025 Strategic Framework

The Hobart 2025 Strategic Framework (Strategic Framework) sets the strategic direction for Hobart to 2019, its overarching vision is that it:

- *offers opportunities for all ages and a city for life;*
- *is recognised for its natural beauty and quality of environment;*
- *is well governed at a regional and community levels;*
- *achieves good quality development and urban management;*
- *is highly accessible through efficient transport options;*
- *builds strong and healthy communities through diversity, participation and empathy; and*
- *is dynamic, vibrant and culturally expressive.*

The Strategic Framework sets out seven Future Direction Areas and associated desired outcomes listed below that can be furthered through the development of Macquarie Point:

#### **FD1 – offers opportunities for all ages and a city for life**

- *FD1.1. Opportunities for education, employment and fulfilling careers and retaining young people*
- *FD1.2. Lifestyle that will encourage all ages to see the city as a desirable location and lifelong home*

#### **FD2 – is recognised for its natural beauty and quality of environment**

- *FD2.1. The natural beauty of Mount Wellington, the Derwent River, bushland surrounds and foreshore locations is highly valued.*
- *FD2.2. Community connection to the natural environment through the protection of views, vistas, access and linkages is enhanced.*

## AllUrbanPlanning

- *FD2.3. The physical environment has been conserved in a way that ensures we have a healthy and attractive city.*
- *FD2.4. Better understanding of climate change and its potential effect on the natural and built environment and strategies developed.*

### **FD3 – is well governed at a regional and community level**

- *FD3.1. An integrated approach to the planning and development of the wider metropolitan region.*
- *FD3.2. Partnerships with governments, the private sector and local communities in achieving significant regional, city and community goals.*
- *FD3.3. Development of technologies that give young people opportunities to contribute to planning and development in the city*

### **FD4 – achieves good quality development and urban management** **FD4.1. The city remains unique in its own right, protecting its built heritage and history.**

- *FD4.2. Quality development with the principles of sustainable cities and the reduction of ecological impacts pursued.*
- *FD4.3. Access to the waterfront, foreshores, public and open spaces is valued.*
- *FD4.4. The city continues to enjoy the benefits of scale and proximity*

### **FD5 – is highly accessible through efficient transport systems**

- *FD5.1. Convenience and accessibility through the greater use of transport alternatives and an effective road and travel network.*
- *FD5.2. An integrated approach to transport planning within the city and across the wider metropolitan region.*

### **FD6 – builds strong and healthy communities through diversity, participation and empathy**

- *FD6.1. A spirit of community.*
- *FD6.2. Diversity is valued and there is participation by all in their community.*
- *FD6.3. A friendly and compassionate society.*
- *FD6.4. A safe and healthy city.*

### **FD7 – is dynamic, vibrant and culturally expressive**

- *FD7.1. A destination of choice and a place for business.*
- *FD7.2. Clever thinking and support for creativity will help build a strong economic foundation.*
- *FD7.3. Entertainment, arts and cultural activities promote the distinctive character of the city and lifestyle opportunities, and strong communities will ensure a vibrancy and way of life that is Hobart.*

## 6.3 Public Spaces and Public Life – A City with People in Mind, Gehl Architects

The objective of the study was to create a stronger coherence between the life in the city and planned or existing building structures. The study made the following recommendations with regard to the development of the Macquarie Point site:

### **Supplement to the city**

- *investigate how Hobart Railyards can supplement Hobart.*

### AllUrbanPlanning

- *what is Hobart lacking at the moment?*
- *how can Hobart Railyards be a valuable addition to the existing and what special qualities should it hold?*
- *links with the surroundings.*
- *ensure strong connections with the rest of the city centre and Queens Domain.*
- *walking, cycling and transport links are of high importance.*
- *ensure a high level of continuation of existing street grids and urban pattern.*
- *improve Evans Street and Davey Street as important interfaces and links to the city.*
- *given the extraordinary location of Hobart Railyards, the waterfront should be celebrated by an urban formulated public space relating to its highly urban situation.*

#### **Multifunctional mix of use**

The buildings at the Macquarie Point site ought to hold a multifunctional mix of use, within the buildings and within the individual quarters;

- *ensure passive surveillance by placing residences low and in close contact with public space;*
- *build low and dense and avoid tall buildings creating problems at the micro-climatic level.*

The proposed mix of uses, reduced building envelopes, public spaces and connectivity with the CBD under the reset masterplan and the proposed amendments are highly consistent with these objectives.

## 7. Land Use Planning and Approvals Act 1993

### 7.1 Land Use Conflicts

The proposal as far as practicable avoids the potential for land use conflicts with use and development permissible under the Planning Scheme applying to the adjacent area. The three pertinent issues are the interface with the working port, the potential for environmental harm to surrounding uses from the WWTP and the potential for land use conflict between residential and visitor accommodation uses and the use of Macquarie Point for major public events.

#### **The port interface**

As a working port, the Macquarie Point Wharves precinct of the Port of Hobart generates a number of typical external impacts from day-to-day operations such as: loading and unloading vessels, warehousing operations, general cargo handling equipment and from operational movements through the port precinct from heavy vehicles. Impacts include air emissions, noise (and vibration), dust, waste, truck traffic, lighting, handling of dangerous goods risks and typical bio-security risks from overseas commercial vessels.

The proposed amendments maintain the provisions of the Planning Scheme that manage the port interface and ensure that future use and development does not compromise the operation of the Port of Hobart. To protect the operations of the port the non-sensitive use buffer of the Arts and Institutional Activity Area (existing Commercial and Institutional Area) will be maintained and Desired Future Character Statements are included in the SDP at clause 32.3.5, along with standards at clauses 32.6.2 and 32.7.1 for both sensitive and non-sensitive uses in specific areas along, or in close proximity to, the port boundary.

## AllUrbanPlanning

The SDP also includes a number of 'Matters to be Considered' at clause 32.4 to allow conditions to be imposed on use and development in certain circumstances, where the Council must consider:

- *The suitability of proposed development to achieve satisfactory levels of safety and amenity of occupants including the avoidance of vulnerability to noise, air, vibration and lighting impacts from the Port of Hobart;*
- *The impact on the operation of the Port of Hobart;*
- *Protection of public infrastructure and the environment;*

The reset masterplan will not alter the port protection measures under the existing Planning Scheme.

### WWTP

It is proposed to amend clause 32.14.6 to remove the considerations for non sensitive uses.

As discussed in Section 4.6 above, the existing Clause 32.14.6 was determined by the TPC based on evidence before it at the time of the hearings for the 2/2015 Amendments in 2016. At that time all evidence was on a 'desktop basis' only.

Subject to Dr Carter's report the Minister can be satisfied that the proposed amendments to Clause 32.14.6 will as far as practicable, avoid the potential for land use conflicts between the WWTP, while it continues to operate, and the use and development permissible under the Planning Scheme.

### Residential use and major public events

The proposal includes a new matter for consideration under Clause 32.4 and amendments to Clause 32.6.2 requiring residential and visitor accommodation development to be designed and constructed to achieve a minimum reduction in sound pressure level between the exterior of the building and the bedroom or living room. The design targets in 32.6.2 have been drafted with reference to similar provisions for an entertainment zone in the Fortitude Valley Neighbourhood Plan, Brisbane City Council, 2000.

## 7.2 Impact of the Amendment on the Region as an Entity

The proposed amendments reset the spatial arrangement of mixed use redevelopment of the site and will have an overwhelmingly positive impact on the Hobart CBD, and Southern Tasmania in general. These considerations are assessed in the updated market impact statement prepared by ACE Group.

## 7.3 State Policies

The following State Policies are made under the State Policies and Projects Act 1993:

- State Policy on the Protection of Agricultural Land 2009;
- State Policy on Water Quality Management 1997; and
- Tasmanian State Coastal Policy 1996.

The National Environmental Protection Measures are automatically adopted as State Policies under the State Policies and Projects Act 1993.

- State Policy on the Protection of Agricultural Land 2009;
- State Policy on Water Quality Management 1997;
- Tasmanian State Coastal Policy 1996; and
- National Environmental Protection Measures (NEPMS).

The following section examines the State Policies as they apply to this amendment.

## AllUrbanPlanning

### 7.3.1 State Policy on the Protection of Agricultural Land 2009

The purpose of the State Policy on the Protection of Agricultural Land 2009 is:

*“to conserve and protect agricultural land so that it remains available for the sustainable development of agriculture, recognising the particular importance of prime agricultural land”.*

#### Comment

This Policy is not relevant to the proposal.

### 7.3.2 State Coastal Policy 1996

The following desired Outcomes of the State Coastal Policy 1996 are considered most relevant to the proposed amendments:

#### *Coastal Uses and Development*

*2.1.4. Competing demands for use and development in the coastal zone will be resolved by relevant statutory bodies and processes, in particular the Land Use Planning Review Panel, the Resource Management and Planning Appeal Tribunal and the Marine Farming Planning Review Panel. Planning schemes, marine farming development plans and other statutory plans will provide guidance for resource allocation and development in accordance with this Policy.*

#### *Transport*

*2.5.5. The multiple use of port areas will be encouraged but priority will be given to efficient port operations and safety requirements subject to cultural, natural and aesthetic values not being compromised.*

#### Comment

The reset masterplan relates to Stage 1 of the Tasmanian Government’s reset and does not involve port land. As discussed above the amendments maintain the port protection measures of the existing Planning Scheme and will prioritise efficient port operations and safety requirements while also being respectful of cultural, natural and aesthetic values.

The proposal is considered consistent with these Outcomes and the State Coastal Policy.

### 7.3.1 State Policy on Water Quality Management 1997

The State Policy on Water Quality Management is concerned with achieving ‘sustainable management of Tasmania’s surface water and groundwater resources by protecting or enhancing their qualities while allowing for sustainable development in accordance with the objectives of Tasmania’s Resource management and Planning System’.

#### Comment:

The proposed amendments continue to allow for suitable stormwater treatment to be incorporated in future development as required by the Planning Scheme and as described in the accompanying updated infrastructure assessment prepared by Pitt & Sherry. Such measures will ensure the long-term quality of stormwater runoff is efficiently managed to protect water quality in accordance with this Policy.

## 7.4 National Environment Protection Measures

The National Environmental Protection Measures relate to:

- ambient air quality;
- ambient marine, estuarine and fresh water quality;

## AllUrbanPlanning

- protection of amenity in relation to noise;
- general guidelines for assessment of site contamination;
- environmental impacts associated with hazardous wastes; and
- re-use and recycling of used materials.

### Comment:

The proposal maintains the existing Environmental Management provisions under section 32.14 of the SDP and Schedule 8 of the Planning Scheme to manage emissions and water quality consistent with the above Measures as far as they are relevant.

## 7.5 Southern Tasmania Regional Land Use Strategy

The Southern Tasmania Land Use Strategy 2010-2035 (STRLUS) sets the strategic direction for southern Tasmania and espouses various policies to achieve its strategic objectives. The implications of the STRLUS have been considered in the accompanying assessment of market impacts prepared by AEC Group.

The proposed amendments are consistent with these objectives and policies in the following respects:

- They will implement an updated master plan for the site that has been prepared with regard to issues of urban amenity, economic development, accessibility, urban design and pedestrian movement;
- tourism land uses will continue to be incorporated as permitted uses;
- the historical significance of the Site is emphasised through the protection of the Goods Shed, Red Shed, Royal Engineers building and setting of the Cenotaph through the Cultural Heritage Schedule and proposed siting and height standards, as well as identification of the original shoreline and railway Round House through the Development Framework;
- there will be some potential for residential use to contribute to overall housing diversity and residential infill targets in Hobart;
- development of the site under the amended SDP will continue to contribute to improving Hobart's international relations and recognition, in line with the Hobart Strategic Plan (2014-2019);
- the reset masterplan configuration will strengthen connections with the Hobart CBD as the primary activity area for Tasmania, the region and the Greater Hobart metropolitan area in terms of business, leisure, entertainment and tourism services.

## Schedule 1 of the Land Use Planning & Approvals Act 1993

The Minister must be satisfied that the proposal furthers the requirements of the Objectives set out in Schedule 1 of the Land Use Planning and Approvals Act 1993. The objectives in Schedule 1 and their relevance to this amendment are addressed below.

### 7.5.1 Schedule 1 Part 1

*(a) To promote the sustainable development of natural and physical resources and the maintenance of ecological processes and genetic diversity;*

### Comment

The amendment promotes the objectives for sustainable development of land through careful design and implementation of an agreed objective for a mixed use precinct at this location that will support the environmental benefits of urban consolidation and multi-modal transport accessibility. The environmental management provisions of the Planning Scheme will continue to apply.

## AllUrbanPlanning

*(b) To provide for the fair, orderly and sustainable use and development of air, land and water;*

### Comment

The site has been identified by the existing and previous Governments for redevelopment as a mixed use precinct in accordance with the requirements of the MPDC Act. The proposed rearrangement of the layout of the existing SDP is supported by analysis and consideration of strategic implications including impacts on the CBD and Port of Hobart. The proposal is considered to be entirely consistent with this objective.

*(c) To encourage public involvement in resource management and planning;*

### Comment

Following the public release and Government endorsement of the Mona's Vision, the Corporation has actively engaged with close to 20 consultative groups across a range of stakeholders at each stage of the reset to provide opportunities for input in the preparation of the reset masterplan. The proposed planning scheme amendment process will include further opportunities for public participation.

*(d) To facilitate economic development in accordance with the objectives set out in paragraphs (a), (b) and (c) above.*

### Comment

For the reasons set out above and throughout this report and accompanying assessments, the proposal is considered consistent with these objectives.

*(e) To promote sharing of responsibility for resource management and planning between the different spheres of Government, the community and industry in the State.*

### Comment

The proposed reset masterplan has been prepared in consultation with State Agencies, utility providers, Council and industry and supports the attainment of this objective.

## 7.5.2 Schedule1 Part 2

*(a) To require sound strategic planning and co-ordinated by state and local Government;*

### Comment

The proposal is consistent with the relevant land use strategies.

*(b) To establish a system of planning instruments to be the principal way of setting objectives, policies and controls for the use, development and protection of land;*

### Comment

The SDP will continue to manage future use and development on this site and is consistent with this objective.

*(c) To ensure the effects on the environment are considered and provide for explicit consideration of social and economic effects when decisions are made about the use and development of land;*

### Comment

The environmental values of the land and the potential impacts of development under the reset masterplan have been assessed in detail as set out throughout this report and accompanying assessments.

## AllUrbanPlanning

*(d) To require land use and development planning and policy to be easily integrated with environmental, social, economic, conservation and resource management policies at State, regional, and municipal levels;*

### Comment

The development of Macquarie Point under the reset masterplan will continue to represent a significant social, environmental and economic benefit at both the local and State levels and is consistent with this objective.

*(e) To provide for the consolidation of approvals for land use or development and related matters, and to co-ordinate planning approvals with related approvals;*

### Comment

The proposal does not conflict with this objective.

*(f) To secure a pleasant, efficient and safe working, living and recreational environment for all Tasmanians and visitors to Tasmania;*

### Comment

The reset masterplan aims to create a high quality environment in a landscaped setting of exceptional amenity within close proximity to surrounding services.

*(g) To conserve those buildings, areas or other places which are of scientific, aesthetic, architectural or historical interest, or otherwise of special cultural value;*

### Comment

The amendments maintain the heritage listing and protection considerations under Schedule 1 of the Planning Scheme. The amended building envelopes will reduce the height and massing allowed under the existing SDP and will therefore have a lesser impact on the context of existing heritage features.

*(h) To protect public infrastructure and other assets and enable the orderly provision and co-ordination of public utilities and other facilities for the benefit of the community;*

### Comment

The amendment is supported by updated analysis by Pitt & Sherry that confirms the capacity of current infrastructure and utilities to cater to the predicted development.

*(i) To provide a planning framework which fully considers land capability;*

### Comment

The proposal does not conflict with the attainment of this objective.

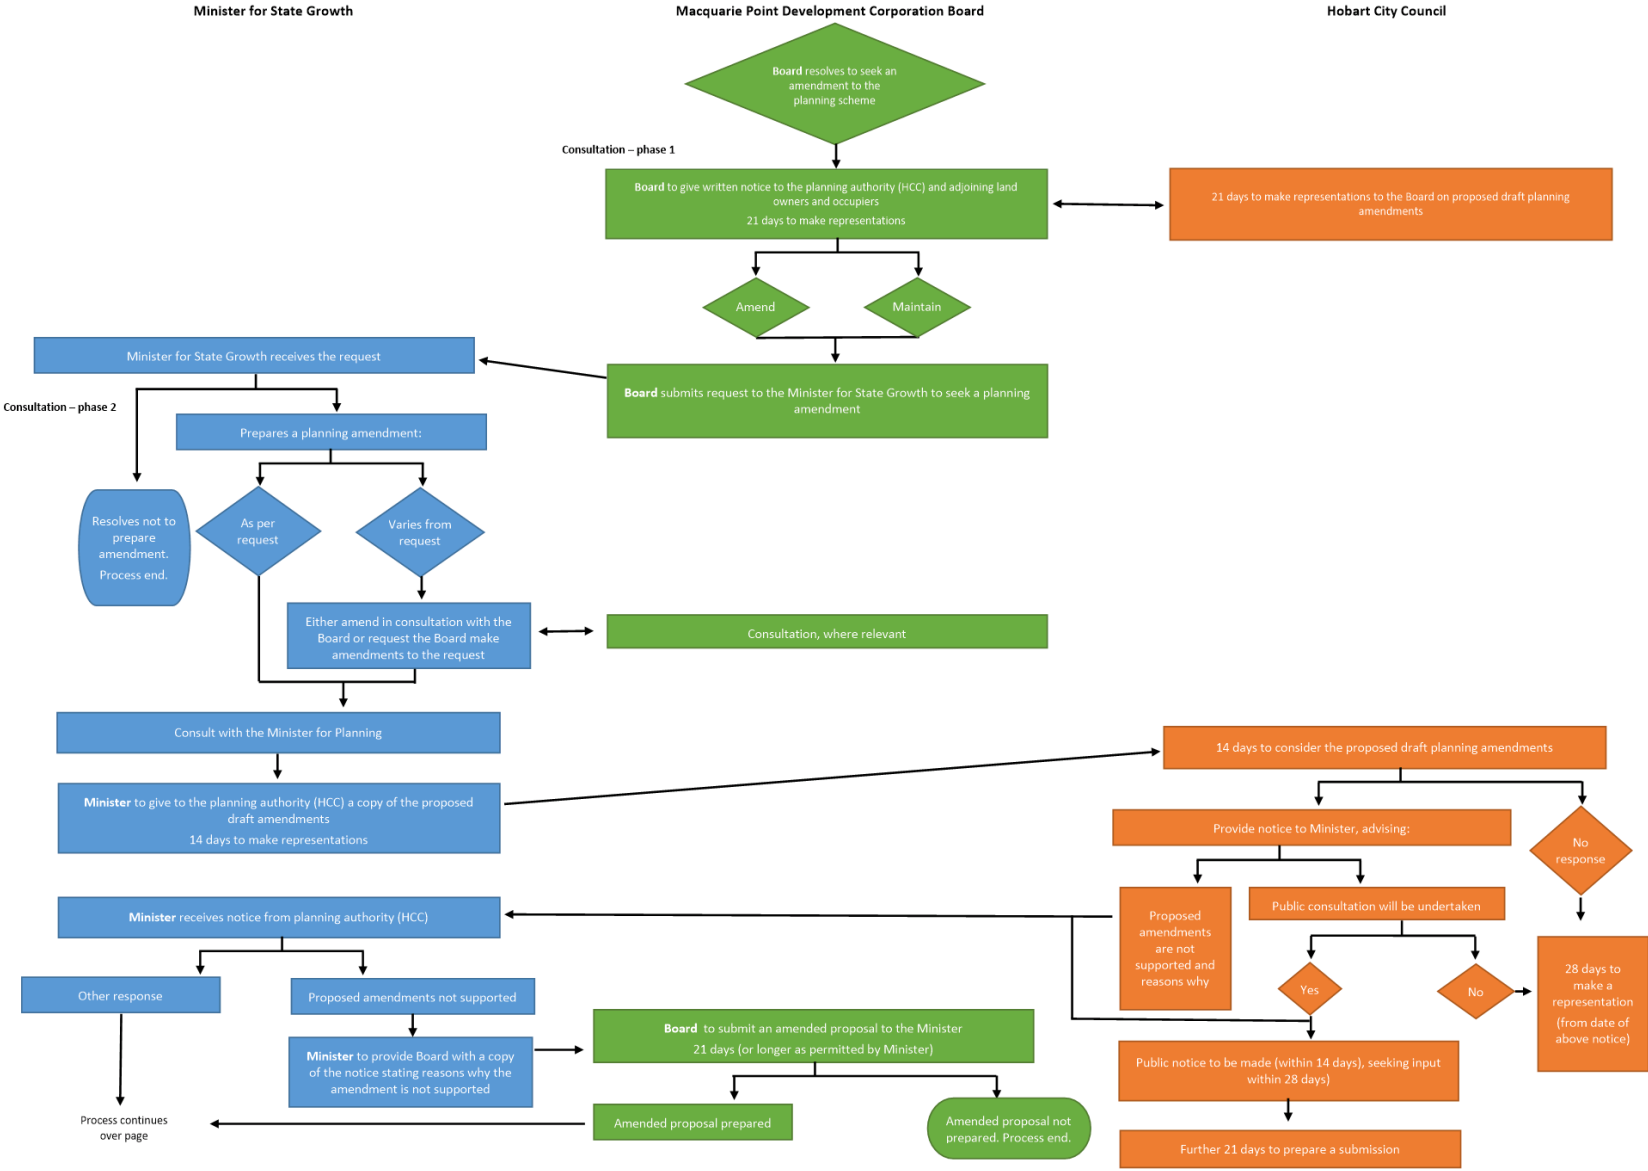

## Conclusion

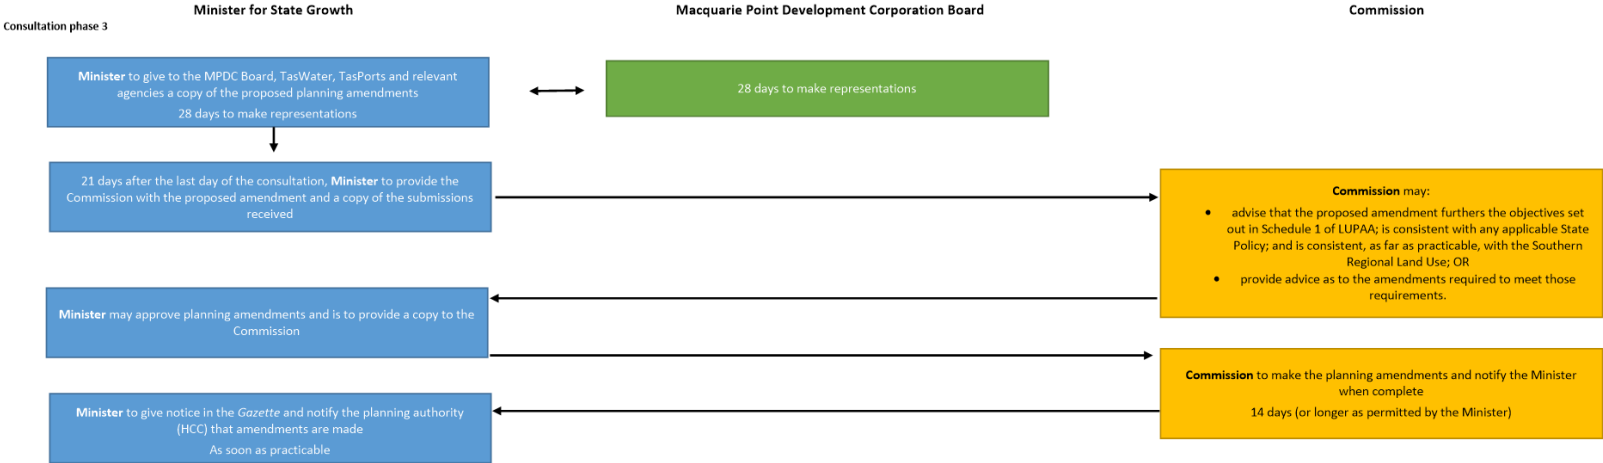

The proposed amendments translate the reset masterplan as amendments to the Macquarie Point Site Development Plan under Section 32 of the Planning Scheme.

This assessment demonstrates that the proposed amendments remain consistent with the strategic principles of the Sullivans Cove Planning Scheme 1997 and meet all statutory requirements under the former provisions of LUPAA and the MPDC Act.

## Macquarie Point Development Corporation Act 2012

Version current from 17 December 2018 to date (accessed 3 January 2019 at 8:47)

### *Division 3 - Planning*

#### **39G. Corporation may request Minister to prepare proposed amendments to planning scheme**

- (1) The Board, by notice to the Minister, may request the Minister to prepare, in accordance with a draft, of the proposed amendments to the planning scheme, attached to the request –
- (a) proposed amendments to the relevant planning scheme that are to apply to the area of land that is within the site on the day on which this section commences; or
  - (b) proposed amendments to the relevant planning scheme that are to apply to an area of land that is within the site but was not within the site on the day on which this section commences.
- (2) The Board may only issue –
- (a) one request under subsection (1) for the purposes of subsection (1)(a) ; and
  - (b) one request under subsection (1) for the purposes of subsection (1)(b) in relation to each area of land that is within the site but was not within the site on the day on which this section commences.
- (3) If the Board intends to make a request to the Minister under subsection (1) , the Board must give to the relevant planning scheme planning authority, and the owners and occupiers of each area of land, any part of which adjoins the site, a notice –
- (a) specifying that the Board intends to make a request to the Minister under subsection (1) ; and
  - (b) including a copy of the draft, of the proposed amendments to the planning scheme, that it intends to attach to the request under subsection (1) ; and
  - (c) inviting the authority, owner and occupiers to make, under subsection (4) , within 21 days, representations in relation to the intended request and the draft referred to in paragraph (b) .
- (4) The relevant planning scheme planning authority and those owners and occupiers to whom a notice has been given under subsection (3) may, within 21 days, make representations to the Board in relation to the request, and the copy of the draft, included in the notice in accordance with subsection (3)(b) .
- (5) Without limiting the generality of subsection (4) , a representation made under that subsection by the relevant planning scheme planning authority may include –
- (a) a statement that the authority does not support the proposed request or draft; and
  - (b) a statement of the amendments that would need to be made to the request and the draft in order for the authority to support them.
- (6) If one or more representations have been made under subsection (4) in relation to a request and a draft of amendments, the Board must, after the last day on which a representation may be made under that subsection –
- (a) consider the representations; and

1/3/2019

View - Tasmanian Legislation Online

- (b) determine whether or not to amend the proposed request and the draft of the amendments so as to take into account any of the representations.
- (7) If the Board determines under subsection (6)(b) to amend the proposed request and the draft of the amendments so as to take into account a representation made under subsection (4) –
  - (a) the Board may amend the proposed request and the draft of the amendments so as to take into account the representation; and
  - (b) the Board may submit to the Minister under subsection (1) the request, as so amended, and the draft of the amendments, as so amended; and
  - (c) subsection (3) does not apply in relation to the request and the draft of the amendments.
- (8) A request under subsection (1) is to include –
  - (a) a statement as to the consultation that the Board has undertaken in relation to the draft of the proposed amendments to the relevant planning scheme; and
  - (b) a statement setting out how the draft of the proposed amendments to the relevant planning scheme –
    - (i) furthers the requirements of the objectives set out in Schedule 1 to the Land Use Planning and Approvals Act 1993 ; and
    - (ii) is consistent with any applicable State Policy within the meaning of the State Policies and Projects Act 1993 ; and
    - (iii) is, as far as practicable, consistent with the Southern Regional Land Use Strategy made under the Land Use Planning and Approvals Act 1993 .

**39H. Preparation of proposed amendments**

- (1) The Minister, after receiving a request under section 39G(1) containing a draft of proposed amendments to the relevant planning scheme, must –
  - (a) prepare proposed amendments to the relevant planning scheme in the form of the draft of the proposed amendments to the relevant planning scheme to which the request relates; or
  - (b) after consultation with the Board, prepare proposed amendments to the relevant planning scheme in the form of the draft of the proposed amendments to the relevant planning scheme to which the request relates, altered by the Minister as the Minister thinks fit; or
  - (c) require the Board to amend, in accordance with the requirement, the draft of the proposed amendments to the relevant planning scheme to which the request relates and make a new request under section 39G(1) in relation to the proposed amendments as amended in accordance with the requirement; or
  - (d) refuse to prepare proposed amendments to the relevant planning scheme.
- (2) The Minister must consult with the Planning Minister in preparing under subsection (1) proposed amendments to the relevant planning scheme.
- (3) After preparing under subsection (1) proposed amendments to the relevant planning scheme and before complying with subsection (11) , the Minister must provide to the relevant planning scheme planning authority a notice –
  - (a) containing a copy of the proposed amendments to the relevant planning scheme; and
  - (b) requesting the authority to give to the Minister, within 14 days, a notice under subsection (4) in relation to the proposed amendments; and
  - (c) specifying that, if the authority does not give to the Minister a notice under subsection (4)(a) or (c) , the authority may, within 28 days after receiving the notice from

1/3/2019

View - Tasmanian Legislation Online

the Minister, make representations in relation to the proposed amendments.

(4) The relevant planning scheme planning authority must, within 14 days after receiving a notice under subsection (3) in relation to the proposed amendments, give to the Minister –

(a) a notice specifying that the authority intends to seek representations from the public in relation to the proposed amendments; or

(b) a notice specifying that the authority does not intend to seek representations from the public in relation to the proposed amendments; or

(c) a notice specifying –

(i) why the authority does not support the proposed amendments; and

(ii) a statement of the amendments that would need to be made to the proposed amendments in order for the authority to support them.

(5) If the relevant planning scheme planning authority gives to the Minister a notice under subsection (4)(b), the authority may, within 28 days after receiving the notice from the Minister, make representations to the Minister in relation to the proposed amendments.

(6) If the relevant planning scheme planning authority gives to the Minister a notice under subsection (4)(a), the planning authority must –

(a) within 14 days, cause a consultation notice in accordance with subsection (7) to be published in a newspaper published in, and circulating generally in, the State; and

(b) cause a copy of the proposed amendments to be made available for viewing by the public at the offices of the authority and at an electronic address of the authority.

(7) A consultation notice in relation to proposed amendments is to –

(a) invite persons and bodies to make, within 28 days after a date, specified in the notice, that is after the date on which the notice is published under subsection (6), representations, to the relevant planning scheme planning authority, in relation to the proposed amendments; and

(b) specify the address of the offices of the authority, and the electronic address of the authority, at which the proposed amendments are available for viewing; and

(c) specify the address, and an electronic address, at which any representations under subsection (8) may be lodged.

(8) A person or body (other than the relevant planning scheme planning authority) may, if a notice has been published under subsection (6)(a) in relation to the proposed amendments, make to the relevant planning scheme planning authority, within 28 days after the notice is published, representations in relation to the proposed amendments by lodging them at an address specified in the notice.

(9) If the Minister receives a notice under subsection (4)(c) in relation to the proposed amendments –

(a) the Minister must provide a copy of the notice to the Board; and

(b) the Minister must notify the Board that, if the Board does not take action under subsection (10) in relation to the request to which the proposed amendments relate, the request will be taken to have never been made; and

(c) if the Board does not provide to the Minister an amended request and amended draft under subsection (10) within 21 days or a longer period allowed by the Minister, the request under subsection (1) is to be taken to have never been made; and

(d) if the Board provides to the Minister an amended request and amended draft under subsection (10) –

1/3/2019

View - Tasmanian Legislation Online

- (i) the request and draft of the proposed amendments are to be taken to be the first request and draft prepared under section 39G(1) ; and
  - (ii) the requirements of section 39G are to be taken to have been satisfied in relation to the request and the draft of the proposed amendments; and
  - (iii) subsection (1) applies in relation to the request and the draft of the proposed amendments.
- (10) If the Board receives a notice from the Minister under subsection (9)(b) in relation to a request and the draft of the proposed amendments prepared by the Board under section 39G to which the request relates, the Board may, within 21 days, or a longer period allowed by the Minister, provide to the Minister a copy of the request, and the draft, that the Board has amended in accordance with the statement set out in the notice under subsection (4)(c) in relation to the proposed amendments.
- (11) After preparing under subsection (1) proposed amendments to the relevant planning scheme and receiving from the relevant planning scheme planning authority a notice under subsection (4) and before approving the amendments under section 39I(1) , the Minister must provide a notice specifying that the amendments have been prepared, and a copy of the proposed amendments, to –
- (a) the Board; and
  - (b) each relevant statutory authority; and
  - (c) any Agency that the Minister considers has an interest in the proposed amendments to the relevant planning scheme.
- (12) A notice for the purposes of subsection (11) in relation to proposed amendments is to invite the persons or bodies to whom the notice is provided to make to the Minister, within 28 days, representations in relation to the proposed amendments.
- (13) A person or body to which a notice under subsection (11) has been provided may make to the Minister, within 28 days after the notice is provided, representations in relation to the proposed amendments.
- (14) If a notice has been published under subsection (6)(a) in relation to the proposed amendments, the relevant planning scheme planning authority must, within 21 days after the last day on which a representation may be made under subsection (8) in relation to the proposed amendments, provide to the Minister –
- (a) a copy of all representations received by the authority in relation to the proposed amendments; and
  - (b) a copy of the authority's opinion in relation to the representations; and
  - (c) a copy of any representations the authority wishes to make in relation to the proposed amendments.
- (15) The Minister must, within 21 days after either the last day on which a representation may be made under subsection (13) or, in a case to which subsection (14) applies, the day on which the Minister receives copies of representations under subsection (14) , whichever is the later day, provide to the Commission –
- (a) a copy of the proposed amendments; and
  - (b) if the Minister is considering approving under section 39I(1) a copy of the proposed amendments in the form of the proposed amendments altered as the Minister thinks fit – a copy of the proposed amendments as so altered; and
  - (c) a copy of all the representations made in relation to the proposed amendments; and
  - (d) a notice requesting the Commission to provide to the Minister a notice under subsection (16) in relation to the proposed amendments, if any, provided to the

1/3/2019

View - Tasmanian Legislation Online

Commission under paragraph (b) .

(16) The Commission, within 21 days after receiving a notice from the Minister under subsection (15)(d) , may, by notice to the Minister –

(a) advise the Minister that, in the opinion of the Commission, the requirements of section 39G(8)(b)(i), (ii) and (iii) have been –

(i) satisfied in relation to the draft of the proposed amendments to the relevant planning scheme; or

(ii) if a copy of the proposed amendments is provided to the Commission under subsection (15)(b) – satisfied in relation to those proposed amendments; or

(b) provide to the Minister the amendments that, in the opinion of the Commission, are required to be made –

(i) to the draft of the proposed amendments to the relevant planning scheme; or

(ii) if a copy of the proposed amendments is provided to the Commission under subsection (15)(b) – to those proposed amendments –

in order for the requirements specified in section 39G(8)(b)(i), (ii) and (iii) to be satisfied in relation to the proposed amendments, and the reasons why the Commission is of that opinion.

### **39I. Approval of proposed amendments to relevant planning scheme**

(1) The Minister, after considering all representations made under section 39H(5) , (13) or (14) (c) and after altering the proposed amendments in accordance with the amendments, if any, of the Commission provided to the Minister under section 39H(16)(b) , may –

(a) approve proposed amendments to the relevant planning scheme that are to apply to the area of land that is within the site on the day on which section 39G commences; or

(b) approve proposed amendments to the relevant planning scheme that are to apply to the area of land that is within the site but was not within the site on the day on which section 39G commences; or

(c) refuse to approve proposed amendments to the relevant planning scheme.

(2) The proposed amendments to the relevant planning scheme that are approved under subsection (1) are to be –

(a) in the form of the proposed amendments to which the notice under section 39H(11) relates; or

(b) after consultation with the Board, in the form, of the proposed amendments to which the notice under section 39H(11) relates, altered as the Minister thinks fit.

(3) As soon as practicable after approving under subsection (1) proposed amendments to the relevant planning scheme, the Minister must provide to the Commission –

(a) a copy of the approval; and

(b) a copy of the proposed amendments to the relevant planning scheme to which the approval relates; and

(c) a statement setting out how the proposed amendments to the relevant planning scheme –

(i) further the requirements of the objectives set out in Schedule 1 to the Land Use Planning and Approvals Act 1993 ; and

(ii) are consistent with any applicable State Policy within the meaning of the State Policies and Projects Act 1993 ; and

1/3/2019

View - Tasmanian Legislation Online

(iii) are, as far as practicable, consistent with the Southern Regional Land Use Strategy made under the Land Use Planning and Approvals Act 1993 ; and

(d) a direction to the Commission to make the proposed amendments to the relevant planning scheme and publish, in the manner that the Commission thinks fit, the statement referred to in paragraph (c) .

### 39J. Commission to amend relevant planning scheme

(1) Within 14 days, or a longer period approved by the Minister, after the Commission receives under section 39I(3)(d) a direction to make proposed amendments to the relevant planning scheme, the Commission must –

(a) prepare amendments to the relevant planning scheme in the form of the proposed amendments to which the direction relates; and

(b) make the amendments to the relevant planning scheme.

(2) If a direction is given to the Commission under section 39I(3)(d) to make proposed amendments to the relevant planning scheme, the Commission may, under subsection (1) , make the proposed amendments altered so as to correct an anomaly or minor mistake that it is necessary to correct in order for the direction to be effectively implemented.

(3) Without limiting the generality of subsection (2) , the correction of a mistake or anomaly in accordance with that subsection includes the correction of a mistake or anomaly that has arisen by virtue of the relevant planning scheme having been amended in accordance with the direction.

(4) Within 14 days, or a longer period approved by the Minister, after the Commission receives under section 39I(3)(d) a direction to make proposed amendments to the relevant planning scheme, the Commission must notify the Minister of the making of the amendments under subsection (1) .

(5) The Minister must, as soon as practicable after receiving a notice under subsection (4) –

(a) give notice in the *Gazette*, and in a newspaper circulating generally in Tasmania, of the making of the amendments to the relevant planning scheme and the day on which the amendments are to come into effect; and

(b) notify the relevant planning scheme planning authority of –

(i) the making of the amendments; and

(ii) the day on which the amendments come into effect.

(6) Amendments to the relevant planning scheme made under subsection (1) come into effect on –

(a) a day, after the date on which the amendments were made, specified in the notice in the *Gazette* as the day on which they come into effect; or

(b) if no day is specified in the notice in the *Gazette* as the day on which they come into effect – 7 days after the day on which the notice appears in the *Gazette*.

(7) Amendments to the relevant planning scheme that have come into effect under subsection (6) are, despite any provision of the Land Use Planning and Approvals Act 1993 , to be taken to have been made, to the relevant planning scheme, under that Act.

(8) Amendments to the relevant planning scheme made under subsection (1) are not a statutory rule for the purposes of the Subordinate Legislation Act 1992 .

### 39K. Contents of amendments to relevant planning scheme

(1) In this section –

**draft LPS** means a draft LPS to which the Land Use Planning and Approvals Act 1993 applies;

1/3/2019

View - Tasmanian Legislation Online

**LPS** has the same meaning as in the Land Use Planning and Approvals Act 1993 ;

**site-specific qualification** has the same meaning as in Schedule 6 to the Land Use Planning and Approvals Act 1993 .

(2) Proposed amendments to the relevant planning scheme, and amendments to the relevant planning scheme made under section 39J(1) , may only contain –

- (a) provisions, regulating the planning of the use or redevelopment of the site and the use or redevelopment of the site, that are to apply under the Land Use Planning and Approvals Act 1993 and the relevant planning scheme; and
- (b) any amendments to the relevant planning scheme required in order to give effect to the provisions referred to in paragraph (a) ; and
- (c) amendments referred to in section 39J(2) .

(3) A provision that may, in accordance with subsection (2)(a) , be included in proposed amendments to the relevant planning scheme, or amendments to the relevant planning scheme made under section 39J(1) , may consist of a site-specific qualification.

(4) If, in accordance with subsection (3) , amendments to the relevant planning scheme made under section 39J(1) consist of a site-specific qualification –

- (a) the site-specific qualification is –
  - (i) if it is, in accordance with this Division, part of the relevant planning scheme immediately before the day on which an LPS comes into force in relation to the site – to be taken to be a provision that, in accordance with clause 8 of Schedule 6 to the Land Use Planning and Approvals Act 1993 , must be contained in an LPS, but may be amended or revoked in accordance with this Division; or
  - (ii) if it becomes, in accordance with this Division, part of the relevant planning scheme after the day on which an LPS comes into force in relation to the site – to be taken to be a provision in relation to which a declaration has been given under clause 8A of that Schedule, but may be amended or revoked in accordance with this Division; and
- (b) any other provisions, in relation to the site, of the relevant planning scheme, that consist of a site-specific qualification, are not to be taken to be provisions that, in accordance with clause 8 of that Schedule, must be contained in an LPS in relation to the site.

(5) If the Minister has prepared proposed amendments to the relevant planning scheme under section 39H(1) –

- (a) before a direction has been issued under section 35B(4) of the Land Use Planning and Approvals Act 1993 in relation to a draft LPS that relates to the site – a direction may not be issued under that section of that Act in relation to a draft LPS that relates to the site; or
- (b) after a direction has been issued under section 35B(4) of the Land Use Planning and Approvals Act 1993 in relation to a draft LPS that relates to the site but before an LPS comes into force in relation to the site and amendments – the draft LPS is to be taken for the purposes of that Act not to relate to the site.

(6) Amendments to the relevant planning scheme made under section 39J(1) –

- (a) must further the requirements of the objectives set out in Schedule 1 to the Land Use Planning and Approvals Act 1993 ; and
- (b) must be consistent with any applicable State Policy within the meaning of the State Policies and Projects Act 1993 ; and
- (c) must be, as far as practicable, consistent with the Southern Regional Land Use Strategy made under the Land Use Planning and Approvals Act 1993 ; and

1/3/2019

View - Tasmanian Legislation Online

(d) if the relevant planning scheme is the *Sullivans Cove Planning Scheme 1997* –

(i) must be consistent with the Sullivans Cove Strategic Framework under Part B of that planning scheme; and

(ii) must not amend any listings under Schedule 1 – Conservation of Cultural Heritage Values, of that planning scheme.

### **39L. Minor amendment of relevant planning amendments**

(1) The Minister may prepare a minor amendment to the relevant planning scheme and, by instrument in writing, approve the making of the minor amendment to the relevant planning scheme.

(2) An amendment is only to be taken to be a minor amendment under subsection (1) if the amendment –

(a) is to correct –

(i) a clerical mistake, or an accidental omission, in amendments to the relevant planning scheme made under section 39J(1) ; or

(ii) an evident material miscalculation of figures or an evident material mistake in the description of any person, thing or property referred to in amendments to the relevant planning scheme made under section 39J(1) ; and

(b) will not cause an increase in detriment to any person; and

(c) does not change the use or development that may, or may not, be carried out under the amendments to the relevant planning scheme made under section 39J(1) .

(3) The Minister may only approve under subsection (1) the making of a minor amendment –

(a) where the approval relates to a minor amendment of amendments to the relevant planning scheme, made under section 39J(1) , that apply to the area of land that is within the site on the day on which section 39G commences – if the approval is given within 12 months after those amendments came into effect; or

(b) where the approval relates to a minor amendment of amendments to the relevant planning scheme, made under section 39J(1) , that apply to an area of land that is within the site but was not within the site on the day on which section 39G commences – if the approval is given within 12 months after those amendments came into effect.

(4) A minor amendment referred to in subsection (1) may only consist of any one or more of the following:

(a) an amendment to the amendments to the relevant planning scheme made under section 39J(1) ;

(b) the revocation of one or more of the amendments to the relevant planning scheme made under section 39J(1) ;

(c) the amendment or revocation of the provisions of the planning scheme necessary to give effect to the amendment to, or revocation of, the amendments to the relevant planning scheme made under section 39J(1) .

(5) The Minister must consult with the Planning Minister in preparing a minor amendment under subsection (1) .

(6) Section 39I(3) and section 39J apply in relation to a minor amendment to which an approval under subsection (1) relates as if –

(a) a reference in either of those sections to the proposed amendments to the relevant planning scheme were a reference to the minor amendment; and

(b) a reference in either of those sections to amendments to the relevant planning scheme were a reference to the minor amendment.

1/3/2019

View - Tasmanian Legislation Online

(7) An approval of a minor amendment under subsection (1) , or a minor amendment made in accordance with this section, is not a statutory rule for the purposes of the Subordinate Legislation Act 1992 .

### **39M. Significant amendments to relevant planning amendments**

- (1) The Minister may prepare an amendment to the relevant planning scheme and, by instrument in writing, approve the making of the amendment to the relevant planning scheme.
- (2) An approval under subsection (1) of the making of an amendment may only be made –
  - (a) where the approval relates to an amendment of amendments to the relevant planning scheme, made under section 39J(1) , that apply to the area of land that is within the site on the day on which section 39G commences – if the approval is given within 12 months after those amendments came into effect; or
  - (b) where the approval relates to an amendment of amendments to the relevant planning scheme, made under section 39J(1) , that apply to an area of land that is within the site but was not within the site on the day on which section 39G commences – if the approval is given within 12 months after those amendments came into effect.
- (3) An amendment referred to in subsection (1) may only consist of any one or more of the following:
  - (a) an amendment to the amendments to the relevant planning scheme made under section 39J(1) ;
  - (b) the revocation of one or more of the amendments to the relevant planning scheme made under section 39J(1) ;
  - (c) the amendment or revocation of the provisions of the relevant planning scheme necessary to give effect to the amendment to, or revocation of, the amendments.
- (4) The Minister must consult with the Planning Minister in preparing an amendment under subsection (1) .
- (5) If an approval is given under subsection (1) in relation to an amendment under subsection (1) –
  - (a) a reference in section 39G to a request is to be taken to be a reference to the approval under subsection (1) ; and
  - (b) a reference in section 39G , section 39H, section 39I or section 39J to proposed amendments to the relevant planning scheme or a draft is to be taken to be a reference to the amendment under subsection (1) ; and
  - (c) a reference in section 39J or section 39K(6) to amendments to the relevant planning scheme is to be taken to be a reference to the amendment under subsection (1) .
- (6) An approval under subsection (1) is not a statutory rule for the purposes of the Subordinate Legislation Act 1992 .

### **39N. Amendment under Land Use Planning and Approvals Act 1993 of relevant planning amendments**

- (1) Nothing in this Division is to be taken to permit the amendment under this Act of a provision of a planning scheme that is one of the State Planning Provisions, within the meaning of the Land Use Planning and Approvals Act 1993 .
- (2) An amendment under the Land Use Planning and Approvals Act 1993 to provisions amended or inserted by the amendments to the relevant planning scheme made after consultation with the Planning Minister, as amended, if at all, under this Division, may only be made with the approval of the Minister.

1/3/2019

View - Tasmanian Legislation Online

(3) Subsection (2) ceases to apply in respect of amendments in relation to an area of land at the end of the period of 2 years after proposed amendments to the relevant planning scheme in relation to the area of land are approved under section 39I(1) .

**8.2 Local Government (Meeting Procedures) Regulations 2015 - Review  
of Meeting Times**  
**File Ref: F18/152771; 13-1-2**

---

Memorandum of the General Manager of 20 December 2018.

Delegation: Committee

City of **HOBART**

**MEMORANDUM: CITY PLANNING COMMITTEE**

**Local Government (Meeting Procedures) Regulations 2015  
- Review of Meeting Times**

Regulation 6(2) of the *Local Government (Meeting Procedures) Regulations 2015* require that after each ordinary election, a council and council committee are to review the times of commencement of their meetings.

Regulation 6(1) states that a meeting is not to start before 5:00 pm unless otherwise determined by the council committee by simple majority.

Accordingly, the commencement time for ordinary meetings of the City Planning Committee is submitted for consideration.

**RECOMMENDATION**

***That in accordance with Regulation 6(2) of the Local Government (Meeting Procedures) Regulations 2015, the Committee determine the commencement time for ordinary meetings of the City Planning Committee.***

*As signatory to this report, I certify that, pursuant to Section 55(1) of the Local Government Act 1993, I hold no interest, as referred to in Section 49 of the Local Government Act 1993, in matters contained in this report.*

**8.3 City Planning Division - Revised Fees and Charges - 2018/2019  
Financial Year - Development Compliance  
File Ref: F19/2045; 17/41**

---

Memorandum of the Manager Development Compliance of 9 January 2019.

Delegation: Council

City of **HOBART****MEMORANDUM: CITY PLANNING COMMITTEE****City Planning Division - Revised Fees and Charges -  
2018/2019 Financial Year - Development Compliance**

The purpose of this memorandum is to seek approval for revised fees and charges for the 2018/2019 financial year in respect to the City Planning Division.

**Summary**

At its meeting of 21 May 2018, the Council approved fees and charges for the 2018/2019 financial year. A review of the fees and charges approved by the Council has identified that a minor revision is required to better reflect the cost of the service provided by the Council in the City Planning Division.

The proposed revised fee is as follows:

| <b>Fee Description</b>   | <b>Current Fee</b> | <b>Proposed Fee</b>                      | <b>GST</b> | <b>Unit</b>     |
|--|--------------------|--|------------|-----------------|
| Application for Building Certificates for Class 1 and 10 buildings | \$500              | \$800 plus \$200 per hour of assessment  | N          | Per application |
| Application for Building Certificates for Class 2-9 buildings      | \$550              | \$1200 plus \$200 per hour of assessment | N          | Per application |

**Background**

Pursuant to section 205 of the *Local Government Act 1993*, the Council may impose fees and charges for various services. Fees and charges are reviewed each year as part of the Council's annual budget process. At its meeting of 21 May 2018, the Council approved the fee of \$500 per certificate for a building certificate for class 1 and 10 buildings and \$550 per certificate for a building certificate for class 2 – 9 buildings.

Under section 83 of the *Building Regulations 2018* an application may be made to the General Manager for a building certificate certifying that the relevant council does not intend to take any action under the Act in relation to a building while the certificate is in force.

In order to determine if a certificate should be issued, Council is required to audit every single application for the building and undertake at least one inspection. The audit and inspection is required to be done by a suitably qualified person to ensure the building complies with the Act, complies with all building and plumbing approvals and complies with the provisions of the National Construction Code.

Council's external building surveyors undertake the audit and inspection and provide advice regarding compliance of the building. A number of applications have recently been processed and the experience has been that the assessment is time consuming and the cost to the Council significant.

Because the Council has previously required the application fee to be upfront, it does not on-charge the exact cost to the applicant and as a result the Council has, to date, absorbed the additional cost. As the certificate is entirely for the benefit of the applicant it is not appropriate that the Council absorb this cost.

Significant officer time is involved in identifying the applications which apply to the building, retrieving the files, undertaking an initial assessment and briefing the Council's external building surveyors. It is therefore proposed an application fee be imposed to cover the service provided by the officers in addition to an hourly rate which is expected to represent a full cost recovery for the work undertaken by the Council's officers and external building surveyors.

### **Proposal**

It is proposed the 2018/2019 Fees and Charges be amended as detailed in the recommendation.

### **Financial Implications**

Amendment of the fees as proposed will assist the Council in meeting budget expectations.

### **Delegation**

The matter is delegated to the Council.

**RECOMMENDATION**

***That the Council approve the following amended fees for 2018/2019 pursuant to section 205 of the Local Government Act 1993:***

- 1. Application for a building certificate – class 1 and 10 buildings - \$800 plus \$200 per hour of assessment per application***
- 2. Application for a building certificate – class 2 - 9 buildings - \$1200 plus \$200 per hour of assessment per application***

*As signatory to this report, I certify that, pursuant to Section 55(1) of the Local Government Act 1993, I hold no interest, as referred to in Section 49 of the Local Government Act 1993, in matters contained in this report.*

## **Response to Question Without Notice**

### **APPLICATION FOR EXTENDED HOURS OF LICENSED PREMISES**

**Meeting:** City Planning Committee

**Meeting date:** 10 December 2018

**Raised by:** Deputy Lord Mayor Councillor Burnet

#### **Question:**

Due to the recent increase of applications seeking extended trading hours for licensed premises in the vicinity of the CBD, could the Director please advise what if any consultation is being undertaken with licensees, community assistance groups and the Council?

#### **Response:**

##### **Current Consultation**

The City of Hobart has recently commenced convening Late Night Precinct Stakeholder (LNPS) meetings with representatives from the Liquor and Gaming Branch of Treasury and Finance, the Tasmanian Hospitality Association and Tasmania Police, all of whom work directly with licensees.

The first meeting of this new entity was on 1 November 2018 with the meeting's agenda focused on future funding for the Street Teams Project beyond 31 December 2018, as well as complaints about the behaviour of some taxi drivers touting for business within Salamanca Place and Despard Street areas, rather than using the Taxi Rank in Castray Esplanade.

In early December 2018, the City of Hobart was asked to send a representative to a meeting organised by the Department of Treasury and Finance regarding complaints by accommodation services in and around Despard Street. There were a range of issues in the complaint associated with licensed venues in the area.

A resolution from that meeting was to call a meeting of the LNPS, which was held on 12 December. The members of the LNPS agreed to undertake a number of actions in response to the issues raised. Minutes from this meeting can be found at **Attachment A**.

It was noted at this meeting that Tasmania Police and the THA were unaware of the proposed extension of operating hours requested in the DAs recently approved by the Council and that they would have expressed concerns if aware. It is proposed that mechanisms be put in place to ensure members of the LNPS are made aware of all DAs that involve changes to licensed premises operations so that they can make a representation if appropriate.

This process would match a similar process undertaken by the Liquor Licensing Commission, who seek advice, particularly from Tasmania Police, about new or changes to existing liquor licences.

Council officers have also developed a draft Community Safety Commitment that will be presented to the Council for consideration within the next few months. It is anticipated that this document will also clarify and strengthen the mechanisms for engaging with licensees and organisations involved in the night time economy.

### **Background Information**

Regular meetings with allied community safety partners have been convened by the City of Hobart biannually since late 2016. Representatives attend from the Liquor and Gaming Branch of Treasury and Finance, the Tasmanian Hospitality Association, Tasmania Police, the Salvation Army's Street Teams Management, SL Security (who provide security services at the Salamanca Taxi Rank and the Salamanca Square public toilet facility) and the Tasmanian Taxi Council (South). Staff from other divisions of the City of Hobart have attended as required.

Prior to that, between 2009 and 2015 the Safer Hobart Partnership (SHP) was coordinated and chaired by the City of Hobart. This partnership was a quarterly meeting of government agencies and private businesses and responded to issues much broader than just liquor licensing and the night time economy, including skateboarding and other behavioural challenges by young people in the CBD; anti-graffiti strategies; issues impacting on migrants, humanitarian entrants and international students as well as closed circuit television.

Amongst the SHP's successes were the introduction of the Street Team Project with the Salvation Army and the employment of security guards at the Salamanca Taxi Rank on Friday and Saturday nights. Both of these initiatives are credited by Tasmania Police as reducing public place assaults in the area by 53 per cent. However, by the end of 2015 interest from the numerous parties involved in the SHP waned, with a drop off in attendances at the quarterly meetings resulting in a cessation of the SHP in 2016.

There are 392 premises that have licences to serve alcohol within the Hobart Local Government Area according to data provided by the Liquor and Gaming Branch at the Department of Treasury and Finance on 30 November 2018.

The table below is a breakdown of licensed premises by suburbs across the Hobart Local Government Area.

| Suburb        | Number of licensed venues |
|---------------|---------------------------|
| Battery Point | 51                        |
| Cornelian Bay | 1                         |
| Fern Tree     | 1                         |
| Glebe         | 2                         |
| Hobart        | 177                       |
| Lenah Valley  | 5                         |
| Mount Stuart  | 1                         |
| New Town      | 22                        |
| North Hobart  | 50                        |
| Queens Domain | 1                         |
| Sandy Bay     | 48                        |
| South Hobart  | 14                        |
| West Hobart   | 13                        |

*As signatory to this report, I certify that, pursuant to Section 55(1) of the Local Government Act 1993, I hold no interest, as referred to in Section 49 of the Local Government Act 1993, in matters contained in this report.*

STG-F-1101/2  
12/11/2010**AGENDA ITEMS****1. Around the table introductions****2. Recap of key issues raised at previous meeting**

- Ongoing funding challenges for the Street Teams project
- Taxis not using the taxi rank, trawling along Salamanca Place, Brooke Street and Despard Street to pick up passengers

**3. Actions items from previous meeting**

- Letters of support to Salvation Army for ongoing funding: letters provided
- Taxi newsletter to encourage use of the Taxi Rank: newsletter distributed
- Fourth birthday celebration of Street Teams: event held on Salamanca Lawns 3 December

**4. Background to today's meeting**

This irregular meeting comes as a result of concerns raised with the Treasurer of Tasmania by owners/operators of tourist accommodation in the Despard Street area. Concerns raised included:

- noise from night clubs resulting in sleep disruption for guests in nearby accommodation;
- specific mention of Mobius and Lower House;
- taxis and Uber vehicles lining up in the area waiting for night club patrons;
- cleanliness of the street; and
- the damage to the tourism brand of the area.

The Treasurer convened a meeting on Friday 7 December with Police, City of Hobart and Department of Liquor and Gaming. A decision was made to convene a second meeting of key stake holders to work towards actions in response to the issues raised.

Since the first meeting, additional concerns have been reported regarding similar issues in Wooby's Lane. These additional issues are considered relevant for action alongside concerns raised regarding Despard Street, and so are included for consideration. Concerns specifically include:

- cleanliness in Wooby's Lane, smashed glasses and general rubbish;
- people using the lane as a public toilet as to vomit;
- damage to windows of other shops in the area;
- concerns about the numbers of patrons allowed in the venues in the early hours; and
- responsible Service of Alcohol compliance.

**5. Group discussions and action items**

The various issues were discussed in detail and a number of solutions and potential solutions were identified.

- 5.1. Lock out conditions placed on licensed premises:** Concern was expressed about the recent planning approvals to extend trading hours for a number of venues. Some were concerned that this may encourage other venues to make similar applications. It was suggested that the use of lock-outs from venues after 3am may assist in reducing noise and antisocial behaviour, as it would cause the dispersion of people over a couple hours, rather than large groups leaving venues at the same time. It was noted that lock-out laws in Newcastle, NSW have been effective in reducing a range of anti-social issues associated with licensed premises. It was identified that there is currently one venue in Hobart that has lock-out conditions attached to its licence. The condition on that venue was the result of evidence produced by Tasmania Police and provided to the Liquor Licensing Commissioner. For lock-out conditions to be applied to other venues, similar evidence

STG-F-1101/2  
12/11/2010

would need to be produced to the Commissioner. It was noted that this is not the sole role of Tasmania Police, but that all parties around the table should take responsibility for the gathering and communication of evidence.

It was noted that the period between 4am and 5am is an important break in trading that enables time for people to disperse, the area to be appropriately cleansed

**Action Items:**

- Representatives at this meeting to gather evidence about any licensed premises that may indicate a need for lock-out conditions, and to forward to the Community Safety Officer at the City of Hobart via email to [communitysafety@hobartcity.com.au](mailto:communitysafety@hobartcity.com.au).
- The City Of Hobart to take responsibility for co-ordinating and drafting any letters to the Licensing Commissioner.

**5.2. Creation of a Smoke Free Zone in Despard Street:** It was discussed that one solution to noise levels in Despard Street may be the introduction of a Smoke Free Zone that would require smokers to move away from accommodation businesses. This may also assist with any lock-out conditions attached to any premises in the Despard Street area, as patrons once exited to smoke would be denied re-entry, assisting in the dispersal of patrons over a number of hours rather than all at closing time.

**Action item:** City of Hobart to explore the possibility of making Despard Street area smoke free.

**5.3. Taxi congestion in the Waterfront Precinct Despard Street:** It was raised that the congestion of taxis waiting to attract passengers leaving licensed premises in Despard Street and Brooke Street, is having a significant impact on the ability for emergency services to access the area. It was noted that this also contributes to the noise. A similar issue was discussed at the 1 Nov 2018 meeting with resulting action by the Taxi Council, informing drivers, through their monthly newsletter, of the requirement to use the Taxi Rank in Castray Esplanade.

A query was made regarding the possibility of making the some parts of the waterfront precinct service vehicle free, through signage between certain hours. It was felt that this signage is often ignored and may have unintended consequences. It was agreed that other measures should be trialled first.

A suggested way to encourage taxi drivers to use the taxi rank may be the introduction of an initiative similar to the model used at airports, where taxis are ranked and called up to pick up passengers as needed. The City of Hobart have plans to extend the current taxi rank in Castray Esplanade and are considering other options. It was also noted that from 16 December the taxi rank will move from Castray Esplanade to Murray Street for the Taste of Tasmania.

**Action item:** The City of Hobart to lead a working group, post Taste of Tasmania, to explore initiatives to improve compliance in the use of the taxi rank and to reduce taxi congestion in the waterfront precinct.

**5.4. Having security undertake foot patrols of the waterfront precinct:** People spoke of the success of the Salvation Army's Street Teams initiative and the use of security at the taxi rank and Salamanca Square public toilets as a positive calming presence contributing to a reduction in public place assaults in the area. It was suggested that having security guards patrol the precinct may further enhance the calming and that this is a more efficient and economical model than directing additional police to the area. Security may also be used to gain compliance in any future smoke free zone, and also with taxis and other ride share

STG-F-1101/2  
12/11/2010

vehicles banking up away from the Taxi Rank.

**Action item:** Agreed that it was a worthy idea but currently no funding exists for this proposal. Consideration of possible funding provision by all stakeholders.

**5.5. Cleaning of streets and public amenities:** issues raised included: rubbish around licensed venues; people using public places to relieve themselves; recent change of cleaning times at the Salamanca Square public toilets. It was noted that the numbers of people leaving venues in the early hours often makes it challenging for City of Hobart cleaning staff to enter the area safely, making cleansing untenable at certain times and locations. It was noted that some patrons may be unfamiliar with the public toilets in Salamanca Square.

**Action items:**

- City of Hobart to explore options to improve street cleansing.
- City of Hobart to review its cleansing times for Salamanca Square toilets.
- City of Hobart to improve signage in the Wooby's Lane area directing people to the public toilets in Salamanca Square.

**5.6. Extending the hours of the Street Teams initiative to match licensed premises closure times.** It was noted that, with the recent extension of operating times by some licensed premises, the Street Teams will have ceased operating before these premises close. There was concern that the mismatching of these times may have a negative impact on behaviour. The Salvation Army advised that their current funding will end in April 2019. Without ongoing funding they will not be operating the Street Teams and without additional funding they would not be in a position to extend operating times.

**Action item:** It was noted that the Salvation Army have applied to the State Government for ongoing funding. Consideration of possible funding provision by all stakeholders.

**5.7. Capacity issues raised with the City of Hobart.** It has been suggested to the City of Hobart that some venues were regularly exceeding their venue capacities, especially in the early hours of the morning. It is believed this may be contributing to people using public places to relieve themselves rather than using venue facilities, especially in the Wooby's Lane area. It was suggested that licensed premises may not undertake head counts. Security advised that they had difficulty in obtaining capacity sizes for venues from licensed premises.

**Action item:** City of Hobart to provide security with crowd capacity for venues to enable head counts to be undertaken.

**MEETING CLOSED:** 1325

**DATE AND VENUE OF NEXT MEETING:** TBA –LATE FEB 2019

## 10. QUESTIONS WITHOUT NOTICE

---

Section 29 of the *Local Government (Meeting Procedures) Regulations 2015*.  
File Ref: 13-1-10

An Alderman or Councillor may ask a question without notice of the Chairman, another Alderman, Councillor, the General Manager or the General Manager's representative, in line with the following procedures:

1. The Chairman will refuse to accept a question without notice if it does not relate to the Terms of Reference of the Council committee at which it is asked.
2. In putting a question without notice, an Alderman or Councillor must not:
  - (i) offer an argument or opinion; or
  - (ii) draw any inferences or make any imputations – except so far as may be necessary to explain the question.
3. The Chairman must not permit any debate of a question without notice or its answer.
4. The Chairman, Aldermen, Councillors, General Manager or General Manager's representative who is asked a question may decline to answer the question, if in the opinion of the respondent it is considered inappropriate due to its being unclear, insulting or improper.
5. The Chairman may require a question to be put in writing.
6. Where a question without notice is asked and answered at a meeting, both the question and the response will be recorded in the minutes of that meeting.
7. Where a response is not able to be provided at the meeting, the question will be taken on notice and
  - (i) the minutes of the meeting at which the question is asked will record the question and the fact that it has been taken on notice.
  - (ii) a written response will be provided to all Aldermen and Councillors, at the appropriate time.
  - (iii) upon the answer to the question being circulated to Aldermen and Councillors, both the question and the answer will be listed on the agenda for the next available ordinary meeting of the committee at which it was asked, where it will be listed for noting purposes only.

## 11. CLOSED PORTION OF THE MEETING

---

That the Committee resolve by majority that the meeting be closed to the public pursuant to regulation 15(1) of the *Local Government (Meeting Procedures) Regulations 2015* because the items included on the closed agenda contain the following matters:
